

# **SEMESTER 3**

## **FOOD TECHNOLOGY**

**SEMESTER S3**  
**MATHEMATICS FOR LIFE SCIENCE – 3**  
**(Group D)**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>GDMAT301</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Basic calculus  | <b>Course Type</b> | Theory         |

**Course Objectives:**

To provide a solid understanding of probability theory and its practical applications to address uncertainty and variability in engineering systems effectively.

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                         | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Summarizing data sets, Sample mean, Median and mode, Sample variance and standard deviation, Normal data sets, Paired data sets and sample correlation coefficient.<br><b>(Text1: Relevant topics from sections 2.3.1, 2.3.2, 2.5, 2.6)</b>                                                                                                         | <b>9</b>             |
| <b>2</b>          | Introduction to probability, Sample space and events, Venn diagrams, Axioms of probability, Sample spaces having equally likely outcomes, Conditional probability, Baye's formula, Independent events.<br><b>(Text1: Relevant topics from sections 3.1, 3.2, 3.3,3.4, 3.5, 3.6, 3.7, 3.8 )</b>                                                      | <b>9</b>             |
| <b>3</b>          | Random variables, Discrete and continuous random variables, Probability mass function and Probability density function, Cumulative distribution function, Expectation, Expectation of a function of a random variable and its properties, Variance and standard deviation.<br><b>(Text1: Relevant topics from sections 4.1, 4.2, 4.4, 4.5, 4.6)</b> | <b>9</b>             |
| <b>4</b>          | The Bernoulli and binomial random variables and its distribution, The Poisson random variable and its distribution, Uniform distribution, Normal and standard normal distribution.<br><b>(Text1: Relevant topics from sections 5.1, 5.2, 5.4, 5.5)</b>                                                                                              | <b>9</b>             |

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**  
**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| <b>Course Outcome</b> |                                                                                                                                                                  | <b>Bloom's<br/>Knowledge<br/>Level (KL)</b> |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>CO1</b>            | Understand the methods of descriptive statistics to summarize and analyze data systematically.                                                                   | <b>K2</b>                                   |
| <b>CO2</b>            | Understand the basics of probability theory and to apply the fundamental concepts and methods to analyze uncertainty and make predictions.                       | <b>K3</b>                                   |
| <b>CO3</b>            | Apply the concept of random variables and their associated probability distributions to study random phenomena.                                                  | <b>K3</b>                                   |
| <b>CO4</b>            | Understand the fundamental probability distributions and to apply statistical techniques effectively to make informed decisions based on probabilistic analysis. | <b>K3</b>                                   |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

## SEMESTER S3

### FOOD THERMODYNAMICS AND PROCESS CALCULATIONS

|                                            |                                                                      |                    |               |
|--------------------------------------------|----------------------------------------------------------------------|--------------------|---------------|
| <b>Course Code</b>                         | <b>PCFTT302</b>                                                      | <b>CIE Marks</b>   | 40            |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:1: 0 :0                                                            | <b>ESE Marks</b>   | 60            |
| <b>Credits</b>                             | 4                                                                    | <b>Exam Hours</b>  | 2 Hrs 30 Mins |
| <b>Prerequisites (if any)</b>              | Knowledge of<br>fundamental Physics,<br>Chemistry and<br>Mathematics | <b>Course Type</b> | Theory        |

#### Course Objectives:

1. Introduction of key thermodynamics concepts in food technology
2. Familiarization with important concepts such as heat and mass balance in industrial food processing
3. Basic concepts of reaction engineering.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Ideal and real gas laws:</b> – Gas constant - calculations of pressure, volume and temperature using ideal gas law, Humidity, Calculation of absolute humidity, molal humidity, relative humidity and percentage humidity - Use of humidity in condensation and drying - Humidity chart, dew point.         | <b>11</b>            |
| <b>2</b>          | <b>Material balance in unit operations:-</b> such as evaporation, crystallization, mixing, leaching, extraction, absorption, distillation and drying.Heat capacity of solids, liquids, gases, and solutions, use of mean heat capacity in heat calculations, problems involving sensible heat and latent heat. | <b>11</b>            |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |           |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>3</b> | <b>Introduction: Fundamental concepts and definitions</b> - closed, open, and isolated system – intensive and extensive properties - path and state functions - reversible and irreversible process -Zeroth law of thermodynamics - First law of thermodynamics - internal energy- enthalpy – heat capacity - first law for cyclic, non-flow and flow processes - applications - Second law of thermodynamics - limitations of first law - general statements of second law - concept of entropy - calculation of entropy changes - Carnot's principle -absolute scale of temperature - Clausius inequality - entropy and irreversibility - Third law of thermodynamics. | <b>11</b> |
| <b>4</b> | <b>Overview of chemical reaction engineering:</b> classification of chemical reactions, the definition of reaction rate, concentration and temperature dependant term of rate equation, order, and molecularity, elementary and non-elementary reactions, Reactors: Batch reactor, continuous stirred tank reactor (CSTR), Plug flow reactor (PFR), Enzymatic reaction fundamentals, Michaelis - Menten kinetics, Batch reactor calculations forenzymatic reactions. Bioreactors- cell growth kinetics- Monod equation.                                                                                                                                                  | <b>11</b> |

**Course Assessment Method**  
(CIE: 40 marks,ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                              | Part B                                                                                                                                                                                                                                                            | Total     |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                       | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Develop and solve basic material balance equations for the unit operations employed in food processing industries.                                    | K3                           |
| CO2            | Develop and solve basic energy balance equations for the unit process employed in food processing industries                                          | K3                           |
| CO3            | Apply the laws of thermodynamics to analyse various processes .                                                                                       | K2                           |
| CO4            | State and prove the equivalence of two statements of the second law of thermodynamics and evaluate the limitations of the first law of thermodynamics | K2                           |
| CO5            | The concept of reaction rates and different reactors used in food industries.                                                                         | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 3   | 1   |     |     |     |     |     |     |      |      | 3    |
| CO2 | 2   | 3   | 2   |     |     |     |     |     |     |      |      | 3    |
| CO3 | 3   | 1   |     |     |     |     |     |     |     |      |      | 3    |
| CO4 | 3   | 1   |     |     |     |     |     |     |     |      |      | 3    |
| CO5 | 3   | 2   | 1   |     |     |     |     |     |     |      |      | 3    |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

**SEMESTER S3**  
**FOOD MICROBIOLOGY**

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>PCFTT303</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:1:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | None            | <b>Course Type</b> | Theory         |

**Course Objectives:**

1. Understanding the morphology and structure of microbes
2. To study the microbiological techniques for quality evaluation of food
3. To acquire knowledge on basic concepts of microbial contamination and spoilage
4. To study the various foodborne illness of microbial origin and their control measures

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <p><b>Introduction:</b> Morphology, structure, microbiology and reproduction of Bacteria, Yeast, mold, actinomycetes and algae.</p> <p><b>Microbial growth and death kinetics:</b> Definition, Growth curves (different phases), synchronous growth, doubling/generation time, intrinsic and extrinsic factors, relationship between number of generations and total number of microbes.</p> <p><b>Microscopic Techniques:</b> Light Microscopy, Fluorescence Microscopy, Electron Microscopy, Scanning Probe Microscopy</p> | <b>11</b>            |
| <b>2</b>          | <p><b>Enumeration of microorganisms</b> – quantitative and qualitative methods, microscopic and culture-dependent methods- Direct microscopic observation, culture, enumeration and isolation methods; Chemical (LAL, ATPase, radiometry), Physical (Impedance, microcalorimetry, flow cytometry) and immunological methods (ELISA, RIA, Immunomagnetic); Biosensors, Test for bacterial toxins in foods, Rapid methods and automation (FACS, PCR).</p>                                                                      | <b>11</b>            |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                            |           |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>3</b> | <b>Microflora associated with various food groups:-</b> Food spoilage: Important food spoilage bacteria – psychrotrophic, thermotolerant, thermophilic, aciduric; characteristic features and significance of spoilage of different groups of foods – Cereals, fruits & vegetables, meat, sea foods, eggs, milk and milk products. Sources of contamination. Fermented food products- prebiotics, probiotics; Spoilage of fermented foods. | <b>11</b> |
| <b>4</b> | <b>Food poisoning and microbial foodborne diseases:</b> Foodborne infections – Salmonellosis, listeriosis, pathogenic E. coli, shigellosis, campylobacteriosis, enteric viruses, brucellosis, Q fever; Foodborne Intoxications – staphylococcal, botulism, mycotoxicosis; Foodborne toxicoinfections – gastroenteritis, cholera. Foodborne parasites. Control of microorganisms in foods.                                                  | <b>11</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                    | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                      | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Describe the basics of food microbiology, microscopy, major microorganisms in food, their morphology, isolation, growth, quantification and culture. | <b>K1</b>                    |
| <b>CO2</b>     | Explain the qualitative and quantitative methods to detect microbes and microbial toxins in food.                                                    | <b>K2</b>                    |
| <b>CO3</b>     | Identify the factors and microbes involved in food spoilage, food-borne pathogens and fermented foods.                                               | <b>K1</b>                    |
| <b>CO4</b>     | Explore different illnesses produced by microorganisms in food                                                                                       | <b>K3</b>                    |
| <b>CO5</b>     | Elaborate the strategies to control the growth of microorganisms in food                                                                             | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S3

### FOOD PROCESS ENGINEERING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PBFTT304</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:1         | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | PBL            |

#### Course Objectives:

1. Understand the principles and techniques of food processing
2. Apply theoretical knowledge to analyse and solve practical problems in food processing

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Food Processing-</b> Primary, Secondary & Tertiary Processing, Introduction to different types of food manufacturing industries and the products manufactured - Raw material properties - physical, functional – Preparation and Cleaning of raw materials - wet and dry techniques - Peeling, Sorting and grading methods of raw materials, Handling of raw materials using equipment like conveyers and elevators. | <b>9</b>             |
| <b>2</b>          | <b>Size reduction of solids</b> – Principle and laws of size reduction – Kicks, Bond, Rittinger's laws – Energy required for grinding- Universal law of grinding, Equipment used in size reduction- roller mill, impact mill, attrition mill, tumbling mills, crushers and pulveriser, Importance and principles of Homogenization and emulsification, Basic concepts of Mixing, Forming, Filtration.                   | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 3 | <b>Thermal &amp; Low Temperature Processing of Foods-</b> Blanching, Pasteurization, and Shelf life of Thermally processed foods using microbial death kinetics, Drying- Drying rate curve, Drying time prediction - Driers - Tray, tunnel, puff, fluidized bed, spray, Rotary drier etc - Freeze drying. VA, VC refrigeration systems- components - compressor, condenser, evaporator, refrigerant, COP - Chilling and freezing, effect of low temperature on food spoilage, Freezing curve - Frozen food storage | 9 |
| 4 | <b>Non-Thermal Processing-</b> Extrusion - operating characteristics, single screw, twin screw extruders, application, effect on foods. Principle, Process and applications of Ohmic heating, RF heating, Pulsed electric field heating, high pressure processing, Food irradiation and ultrasound techniques. Hurdle technology - Principle and application<br><br><b>Packaging techniques-</b> CAP, MAP, Vacuum packaging, Retort packaging, Aseptic Packaging.                                                  | 9 |

#### Suggestion on Project Topics

1. **Select a Focus Area:** Choose a specific aspect of food processing (e.g., thermal processing methods, size reduction techniques, non-thermal processing innovations) as the focus of your project.
2. **Literature Review:** Conduct a comprehensive literature review on your chosen topic. Gather information on theories, principles, laws (e.g., Kicks, Bond, Rittinger's), and case studies related to food processing techniques.
3. **Define Objectives:** Clearly define the objectives of your project. State what you aim to achieve or investigate through your study.
4. **Plan Experimental Design:** Design experiments or simulations to explore your objectives. Consider factors like equipment selection (e.g., roller mill, impact mill), processing conditions (e.g., temperature, pressure), and methods (e.g., drying techniques, extrusion).
5. **Data Collection:** Conduct experiments or gather data using appropriate methods (e.g., trials with different equipment settings, measurements of temperature profiles during processing).

**6. Data Analysis:**

- Organize your collected data systematically.
- Perform statistical analysis or use appropriate analytical methods (e.g., regression analysis for grinding laws, comparison of drying rates) to interpret your data.
- Present your data analysis results using tables, graphs, or charts as necessary to illustrate trends and relationships.

**7. Compare and Contrast Techniques:** Compare different techniques within your chosen area (e.g., compare the effectiveness of different drying methods, analyse the energy requirements of various size reduction techniques).

**8. Evaluate Results:** Evaluate the results of your experiments or simulations. Discuss how well your findings align with existing theories and whether they suggest improvements or modifications to current practices.

**9. Drafting the Report:**

- Structure your report according to academic standards (e.g., introduction, literature review, methodology, results, discussion, conclusions, recommendations).
- Clearly articulate your research question, objectives, and methodology used.
- Include detailed descriptions of experiments conducted and data collected.
- Present and discuss your findings, linking them back to relevant theories and literature.

**10. Draw Conclusions and Recommendations:** Summarize your findings and draw conclusions based on the results of your project. Provide recommendations for future research or practical applications based on your insights.

**11. Review and Finalize:** Review your draft report for clarity, coherence, and completeness. Ensure all sections are well-organized and effectively communicate your research findings and analysis.

**12. Submit and Present:** Submit your final report according to the specified guidelines. Prepare to present your findings in a clear and engaging manner, addressing any questions or feedback from your audience.

**Course Assessment Method**  
(CIE: 60 marks, ESE: 40 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Project | Internal Ex-1 | Internal Ex-2 | Total |
|------------|---------|---------------|---------------|-------|
| 5          | 30      | 12.5          | 12.5          | 60    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                   | Part B                                                                                                                                                                                              | Total |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 2 marks<br/>(8x2 =16 marks)</li> </ul> | 2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 2 sub divisions. Each question carries 6 marks.<br><br>(4x6 = 24 marks) | 40    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                        | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Identify the principles and techniques of food processing.                                             | K3                           |
| CO2            | Apply principles of size reduction and homogenization in food processing                               | K2                           |
| CO3            | Analyse thermal and low-temperature processing methods in food preservation                            | K2                           |
| CO4            | Evaluate non-thermal processing techniques and their application                                       | K2                           |
| CO5            | Develop food processing strategies integrating multiple techniques for optimal food quality and safety | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 3   |     | 2   |     |     |     |     | 2   |      | 2    | 3    |
| CO2 | 3   | 3   |     | 2   |     |     |     |     | 2   |      | 2    | 3    |
| CO3 | 3   | 3   |     | 2   |     |     |     |     | 2   |      | 2    | 3    |
| CO4 | 3   | 3   |     | 2   |     |     |     |     | 2   |      | 2    | 3    |
| CO5 | 3   | 3   |     | 2   |     |     |     |     | 2   |      | 2    | 3    |

| Text Books |                                                     |                                               |                       |                      |

| 5             | Final Presentations                                                 | 5                     |
| 6             | Project Quality, Innovation and Creativity                          | 3                     |
| <b>Total</b>  |                                                                     | <b>30</b>             |

#### **1. Project Planning and Proposal (5 Marks)**

- Clarity and feasibility of the project plan
- Research and background understanding
- Defined objectives and methodology

#### **2. Contribution in Progress Presentation and Question Answer Sessions (4 Marks)**

- Individual contribution to the presentation
- Effectiveness in answering questions and handling feedback

#### **3. Involvement in the Project Work and Team Work (3 Marks)**

- Active participation and individual contribution
- Teamwork and collaboration

**4. Execution and Implementation (10 Marks)**

- Adherence to the project timeline and milestones
- Application of theoretical knowledge and problem-solving
- Final Result

**5. Final Presentation (5 Marks)**

- Quality and clarity of the overall presentation
- Individual contribution to the presentation
- Effectiveness in answering questions

**6. Project Quality, Innovation, and Creativity (3 Marks)**

- Overall quality and technical excellence of the project
- Innovation and originality in the project
- Creativity in solutions and approaches

## SEMESTER S3

### INTRODUCTION TO ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>GNEST305</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:1:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Demonstrate a solid understanding of advanced linear algebra concepts, machine learning algorithms and statistical analysis techniques relevant to engineering applications, principles and algorithms.
2. Apply theoretical concepts to solve practical engineering problems, analyze data to extract meaningful insights, and implement appropriate mathematical and computational techniques for AI and data science applications.

## SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to AI and Machine Learning:</b> Basics of Machine Learning - types of Machine Learning systems-challenges in ML- Supervised learning model example- regression models- Classification model example- Logistic regression-unsupervised model example- K-means clustering. Artificial Neural Network- Perceptron- Universal Approximation Theorem (statement only)- Multi-Layer Perceptron- Deep Neural Network- demonstration of regression and classification problems using MLP.(Text-2) | <b>11</b>            |
| <b>2</b>          | <b>Mathematical Foundations of AI and Data science:</b> Role of linear algebra in Data representation and analysis – Matrix decomposition- Singular Value Decomposition (SVD)- Spectral decomposition- Dimensionality reduction technique-Principal Component Analysis (PCA). (Text-1)                                                                                                                                                                                                                    | <b>11</b>            |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |           |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>3</b> | <b>Applied Probability and Statistics for AI and Data Science:</b> Basics of probability-random variables and statistical measures - rules in probability- Bayes theorem and its applications- statistical estimation-Maximum Likelihood Estimator (MLE) - statistical summaries- Correlation analysis- linear correlation (direct problems only)- regression analysis- linear regression (using least square method) (Text book 4 )                               | <b>11</b> |
| <b>4</b> | <b>Basics of Data Science:</b> Benefits of data science-use of statistics and Machine Learning in Data Science- data science process - applications of Machine Learning in Data Science- modelling process- demonstration of ML applications in data science- Big Data and Data Science. (For visualization the software tools like Tableau, PowerBI, R or Python can be used. For Machine Learning implementation, Python, MATLAB or R can be used.)(Text book-5) | <b>11</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                    | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                        | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Apply the concept of machine learning algorithms including neural networks and supervised/unsupervised learning techniques for engineering applications.                               | K3                           |
| CO2            | Apply advanced mathematical concepts such as matrix operations, singular values, and principal component analysis to analyze and solve engineering problems.                           | K3                           |
| CO3            | Analyze and interpret data using statistical methods including descriptive statistics, correlation, and regression analysis to derive meaningful insights and make informed decisions. | K3                           |
| CO4            | Integrate statistical approaches and machine learning techniques to ensure practically feasible solutions in engineering contexts.                                                     | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S3/S4

### ECONOMICS FOR ENGINEERS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>UCHUT346</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 2:0:0:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students with an understanding of fundamental economic principles essential for effective decision-making in engineering contexts.
2. To enable students to apply economic analysis to production decisions, cost management, and market strategies in engineering practice.
3. To equip students with the ability to evaluate macroeconomic scenarios, financial methods, and investment decisions relevant to engineering projects.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Basic economic problems – Production Possibility Curve – Utility – Law of diminishing marginal utility –Demand: Factors determining demand – Law of Demand – Demand curve- Price elasticity of demand- measurement of price elasticity and its applications – Supply: factors determining supply - Law of supply – Supply curve- Equilibrium price determination- Changes in demand and supply and its effects on equilibrium price and quantity<br><br>Production: Production function - Law of variable proportion –Returns to scale- Cobb-Douglas Production Function | <b>6</b>             |
| <b>2</b>          | Cost: Cost concepts – Private cost and social cost – Sunk cost – Opportunity cost -Explicit and implicit cost –Short run cost curves –Long run average cost curve -Revenue concepts – Break-even point<br><br>Market: Perfect Competition – Monopoly - Monopolistic Competition (features and equilibrium of a firm) - Oligopoly – Features – Kinked demand model                                                                                                                                                                                                        | <b>6</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                             |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | <p>National income: Concepts (GDP, GNP and NNP)– Final goods and Intermediate goods - Methods of Estimation –output method – expenditure method-- Difficulties in the measurement of national income.</p> <p>Inflation: Causes and Effects – Measures to Control Inflation - Monetary and Fiscal policies – Repo and reverse repo rate</p>                  | <b>6</b> |
| <b>4</b> | <p>Value Analysis and value Engineering: Cost Value, Exchange Value, Use Value, Esteem Value - Aims, Advantages and Application areas of Value Engineering - Value Engineering Procedure</p> <p>Capital Budgeting: Time value of money - Net Present Value Method - Benefit Cost Ratio – Internal Rate of Return – Payback – Accounting Rate of Return.</p> | <b>6</b> |

**Course Assessment Method**  
(CIE: 50 marks, ESE: 50 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/Case Study/<br/>Microproject</b> | <b>Internal Examination-1<br/>(Written)</b> | <b>Internal Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|------------------------------------------------|---------------------------------------------|-----------------------------------------------|--------------|
| <b>10</b>         | <b>15</b>                                      | <b>12.5</b>                                 | <b>12.5</b>                                   | <b>50</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                  | <b>Part B</b>                                                                                                                                                                                                                         | <b>Total</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• Minimum 1 and Maximum 2 Questions from each module.</li> <li>• Total of 6 Questions, each carrying 3 marks (6x3 =18 marks)</li> </ul> | <p>2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 2 sub divisions. Each question carries 8 marks.</p> <p style="text-align: right;">(4x8 = 32 marks)</p> | <b>50</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                 | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of various economic issues using laws and learn the concepts of demand, supply, elasticity and production function.                                 | <b>K2</b>                    |
| <b>CO2</b>     | Develop decision making capability by applying concepts relating to costs and revenue, and acquire knowledge regarding the functioning of firms in different market situations. | <b>K3</b>                    |
| <b>CO3</b>     | Outline the macroeconomic principles of monetary and fiscal systems and national income.                                                                                        | <b>K2</b>                    |
| <b>CO4</b>     | Make use of the possibilities of value analysis and engineering, and take investment decisions through capital budgeting techniques.                                            | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

| Answer any one full question from each module. Each question carries 8 marks |        |                                                                                                                                                                                                     |                              |       |
| Module 1                                                                     |        |                                                                                                                                                                                                     |                              |       |
| 9                                                                            | a)     | Suppose a country is producing at a point inside the production possibility curve. Draw a PPC and examine this situation.                                                                           | CO1                          | (5)   |
|                                                                              | b)     | State the law of demand. Point out any two exceptions of this law.                                                                                                                                  | CO1                          | (3)   |
| 10                                                                           | a)     | A consumer purchases 10 units of a commodity when its price is Rs.100. Later when its price falls to Rs.90, he purchases 8 units only. Estimate price elasticity. What type of a commodity is this? | CO1                          | (5)   |
|                                                                              | b)     | State the law of variable proportion.                                                                                                                                                               | CO1                          | (3)   |

| Module 2 |    |                                                                                                                                                                                                                                                                                      |     |     |
|----------|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 11       | a) | What is oligopoly? Why price is rigid under oligopoly?                                                                                                                                                                                                                               | CO2 | (5) |
|          | b) | The cost function of a firm is given as $TC=1000+10Q-6Q^2+Q^3$ . Calculate fixed cost, variable cost and marginal cost when output is 10 units.                                                                                                                                      | CO2 | (3) |
| 12       | a) | Suppose a firm is earning super normal profit under monopolistic market condition. Explain this situation by drawing a diagram.                                                                                                                                                      | CO2 | (5) |
|          | b) | Suppose a firm sells its product at a price of Rs.10 per unit and its average variable cost is Rs.6. If the firm spend Ra.10000 as rent and pay Rs. 6000 as interest every month, estimate its break-even level of output.                                                           | CO2 | (3) |
| Module 3 |    |                                                                                                                                                                                                                                                                                      |     |     |
| 13       | a) | What is inflation? How does inflation affect investment and production.                                                                                                                                                                                                              | CO3 | (5) |
|          | b) | How will you obtain NNP <sub>fc</sub> from GDP <sub>mp</sub> .                                                                                                                                                                                                                       | CO3 | (3) |
| 14       | a) | From the data given below (In Rs. Crores) estimate GDP <sub>mp</sub> and national income.<br><br>Private final consumption expenditure = 1000, Government expenditure = 500, Invest expenditure = 700, Net exports = 300, Depreciation = 200, NFIA=(-200) and Net indirect tax = 100 | CO3 | (5) |
|          | b) | What is bank rate? Examine the bank rate policy of the government during inflation.                                                                                                                                                                                                  | CO3 | (3) |
| Module 4 |    |                                                                                                                                                                                                                                                                                      |     |     |
| 15       | a) | Examine the procedures of value engineering.                                                                                                                                                                                                                                         | CO4 | (5) |
|          | b) | Examine the application areas of value engineering                                                                                                                                                                                                                                   | CO4 | (3) |

|       |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |     |
|-------|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 16    | a) | 1. Suppose the initial investment of a project is Rs. 3000 (Crores) and the cost of capital or the opportunity cost of capital is 10 percent. Calculate NPV of the project based on the cash flows given below.<br><br>Year                      1                      2                      3                      4                      5<br><br>Cash flow                1000                900                800                700                600<br><br>(In Crores) | CO4 | (5) |
|       | b) | Point out any three merits of NPV method.                                                                                                                                                                                                                                                                                                                                                                                                                                          | CO4 | (3) |
| ***** |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |     |

## SEMESTER S3/S4

### ENGINEERING ETHICS AND SUSTAINABLE DEVELOPMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>UCHUT347</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 2:0:0:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Equip with the knowledge and skills to make ethical decisions and implement gender-sensitive practices in their professional lives.
2. Develop a holistic and comprehensive interdisciplinary approach to understanding engineering ethics principles from a perspective of environment protection and sustainable development.
3. Develop the ability to find strategies for implementing sustainable engineering solutions.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |

**Course Assessment Method**  
(CIE: 50 marks , ESE: 50)

**Continuous Internal Evaluation Marks (CIE):**

Continuous internal evaluation will be based on individual and group activities undertaken throughout the course and the portfolio created documenting their work and learning. The portfolio will include reflections, project reports, case studies, and all other relevant materials.

- The students should be grouped into groups of size 4 to 6 at the beginning of the semester. These groups can be the same ones they have formed in the previous semester.
- Activities are to be distributed between 2 class hours and 3 Self-study hours.
- The portfolio and reflective journal should be carried forward and displayed during the 7th Semester Seminar course as a part of the experience sharing regarding the skills developed through various courses.

One activity* each from Module II, Module III & Module IV                                                                                                                              | G                      | 15        |
| 4           | Final Presentation                                                                                               | A comprehensive presentation summarising the key takeaways from the course, personal reflections, and proposed future actions based on the learnings.                                     | G                      | 5         |
| Total Marks |                                                                                                                  |                                                                                                                                                                                           |                        | <b>50</b> |

\*Can be taken from the given sample activities/projects

**Evaluation Criteria:**

- **Depth of Analysis:** Quality and depth of reflections and analysis in project reports and case studies.
- **Application of Concepts:** Ability to apply course concepts to real-world problems and local contexts.
- **Creativity:** Innovative approaches and creative solutions proposed in projects and reflections.
- **Presentation Skills:** Clarity, coherence, and professionalism in the final presentation.

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Develop the ability to apply the principles of engineering ethics in their professional life.                                                | K3                           |
| CO2            | Develop the ability to exercise gender-sensitive practices in their professional lives                                                       | K4                           |
| CO3            | Develop the ability to explore contemporary environmental issues and sustainable practices.                                                  | K5                           |
| CO4            | Develop the ability to analyse the role of engineers in promoting sustainability and climate resilience.                                     | K4                           |
| CO5            | Develop interest and skills in addressing pertinent environmental and climate-related challenges through a sustainable engineering approach. | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### Suggested Activities/Projects:

#### Module-II

- Write a reflection on a local environmental issue (e.g., plastic waste in Kerala backwaters or oceans) from different ethical perspectives (anthropocentric, biocentric, ecocentric).
- Write a life cycle analysis report of a common product used in Kerala (e.g., a coconut, bamboo or rubber-based product) and present findings on its sustainability.
- Create a sustainability report for a local business, assessing its environmental, social, and economic impacts
- Presentation on biodiversity in a nearby area (e.g., a local park, a wetland, mangroves, college campus etc) and propose conservation strategies to protect it.
- Develop a conservation plan for an endangered species found in Kerala.
- Analyze the green spaces in a local urban area and propose a plan to enhance urban ecology using native plants and sustainable design.
- Create a model of a sustainable urban landscape for a chosen locality in Kerala.

#### Module-III

- Study a local water body (e.g., a river or lake) for signs of pollution or natural flow disruption and suggest sustainable management and restoration practices.
- Analyse the effectiveness of water management in the college campus and propose improvements -

calculate the water footprint, how to reduce the footprint, how to increase supply through rainwater harvesting, and how to decrease the supply-demand ratio

- Implement a zero waste initiative on the college campus for one week and document the challenges and outcomes.
- Develop a waste audit report for the campus. Suggest a plan for a zero-waste approach.
- Create a circular economy model for a common product used in Kerala (e.g., coconut oil, cloth etc).
- Design a product or service based on circular economy and degrowth principles and present a business plan.
- Develop a plan to improve pedestrian and cycling infrastructure in a chosen locality in Kerala

#### **Module-IV**

- Evaluate the potential for installing solar panels on the college campus including cost-benefit analysis and feasibility study.
- Analyse the energy consumption patterns of the college campus and propose sustainable alternatives to reduce consumption - What gadgets are being used? How can we reduce demand using energy-saving gadgets?
- Analyse a local infrastructure project for its climate resilience and suggest improvements.
- Analyse a specific environmental regulation in India (e.g., Coastal Regulation Zone) and its impact on local communities and ecosystems.
- Research and present a case study of a successful sustainable engineering project in Kerala/India (e.g., sustainable building design, water management project, infrastructure project).
- Research and present a case study of an unsustainable engineering project in Kerala/India highlighting design and implementation faults and possible corrections/alternatives (e.g., a housing complex with water logging, a water management project causing frequent floods, infrastructure project that affects surrounding landscapes or ecosystems).

## SEMESTER S3

### FOOD MICROBIOLOGY LAB

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL307</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0-0-3-0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Lab            |

#### Course Objectives:

**1.** Goal of this course is to develop the knowledge of students in the basic area of Food Microbiology. This is essential for the better understanding of various basic microbiological technologies and acquires knowledge about different types microorganisms related to food and techniques of microbial analysis

| <b>Expt. No.</b> | <b>Experiments</b>                                                        |
|------------------|---------------------------------------------------------------------------|
| <b>1</b>         | Introduction to Basic Microbiological Practices and Equipment             |
| <b>2</b>         | Sterilization techniques and disinfection                                 |
| <b>3</b>         | Preparation of culture media – solid and liquid                           |
| <b>4</b>         | Cultivation and Subculturing of microbes                                  |
| <b>5</b>         | Isolation techniques for microorganisms – spread, pour & streak plate     |
| <b>6</b>         | Simple staining techniques                                                |
| <b>7</b>         | Gram staining method for differentiation of bacteria                      |
| <b>8</b>         | Motility of microorganism – hanging drop method                           |
| <b>9</b>         | Enumeration of microorganisms in air                                      |
| <b>10</b>        | Evaluation of microbiological quality of potable water                    |
| <b>11</b>        | Evaluation of microbiological quality of milk (MBRT)                      |
| <b>12</b>        | Quantitative analysis of milk by Standard plate count (SPC) method        |
| <b>13</b>        | Evaluation of microbiological quality of food products                    |
| <b>14</b>        | Microbial Examination of Fruit sample-surface washing and internal tissue |

|    |                                                     |
|----|-----------------------------------------------------|
| 15 | Methods for identification of Escherichia coli      |
| 16 | Methods for identification of Staphylococcus aureus |
| 17 | Counting for yeasts and moulds                      |
| 18 | Demonstration of microbial production of curd       |

**Course Assessment Method**  
(CIE: 50 marks, ESE: 50 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Preparation/Pre-Lab Work experiments, Viva and Timely completion of Lab Reports / Record (Continuous Assessment) | Internal Examination | Total |
|------------|------------------------------------------------------------------------------------------------------------------|----------------------|-------|
| 5          | 25                                                                                                               | 20                   | 50    |

**End Semester Examination Marks (ESE):**

| Procedure/ Preparatory work/Design/ Algorithm | Conduct of experiment/ Execution of work/ troubleshooting/ Programming | Result with valid inference/ Quality of Output | Viva voce | Record | Total |
|-----------------------------------------------|------------------------------------------------------------------------|------------------------------------------------|-----------|--------|-------|
| 10                                            | 15                                                                     | 10                                             | 10        | 5      | 50    |

- *Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.*
- *Endorsement by External Examiner: The external examiner shall endorse the record*

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Demonstrate safety practices inside a microbiology laboratory and familiarise with different equipments                             | K2                           |
| CO2            | Preparation and sterilisation of common culture media for subculturing microbes                                                     | K3                           |
| CO3            | Identify suitable methods for qualitative and quantitative evaluation of food                                                       | K3                           |
| CO4            | Evaluate the total microbial load in the food or in the environment                                                                 | K3                           |
| CO5            | Demonstrate the procedure for identification of specific microorganism in food and usage of beneficial microbes for food production | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Creat

### CO- PO Mapping (Mapping of Course Outcomes with Program Outcomes)

### Continuous Assessment (25 Marks)

#### 1. Preparation and Pre-Lab Work (7 Marks)

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

## **2. Conduct of Experiments (7 Marks)**

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

## **3. Lab Reports and Record Keeping (6 Marks)**

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

## **4. Viva Voce (5 Marks)**

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

***Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.***

## **Evaluation Pattern for End Semester Examination (50 Marks)**

### **1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)**

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.
- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.
- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

### **2. Conduct of Experiment/Execution of Work/Programming (15 Marks)**

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

**3. Result with Valid Inference/Quality of Output (10 Marks)**

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

**4. Viva Voce (10 Marks)**

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

**5. Record (5 Marks)**

- Completeness, clarity, and accuracy of the lab record submitted

**SEMESTER S3**

**FOOD CHEMISTRY LAB**

| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Lab           |

**Course Objectives:**

1. Provides an experimental experience with the basic scientific principles of food systems and practical applications to Food Chemistry.
2. Demonstrate the chemical/biochemical reactions of carbohydrates, lipids, proteins, and other constituents in fresh and processed foods with respect to food quality.
3. Helps to examine the reaction conditions and processes that affect the color, flavor, and texture of food

| <b>Expt. No.</b> | <b>Experiments</b>                                                                                                           |
|------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>1</b>         | Karl Fischer titration for determination of moisture content                                                                 |
| <b>2</b>         | Qualitative tests for carbohydrates<br>a) Distinguishing reducing from non- reducing sugars<br>b) Keto sugar from aldo sugar |
| <b>3</b>         | Determination of rate/ extent of hydrolysis of sucrose/starch                                                                |
| <b>4</b>         | Acid hydrolysis and action of salivary amylase on starch                                                                     |
| <b>5</b>         | Estimation of gluten in wheat                                                                                                |
| <b>6</b>         | Study of gelling properties of starch- gelatinisation and retrogradation                                                     |
| <b>7</b>         | Quantitative tests for proteins- Kjelhdal method                                                                             |
| <b>8</b>         | Effect of heat treatment on protein quality                                                                                  |
| <b>9</b>         | Effect of pH on hydration of meat proteins                                                                                   |
| <b>10</b>        | Water holding capacity and oil holding capacity of proteins                                                                  |

|    |                                                              |
|----|--------------------------------------------------------------|
| 11 | Detection and estimation of oxidative rancidity in fats/oils |
| 12 | Determination of enzymatic browning reactions                |
| 13 | Determination of non enzymatic browning reactions            |
| 14 | Determination of free fatty acid content in fats and oils    |
| 15 | Determination of hardness of water                           |
| 16 | Determination of heat stability of vitamin C                 |
| 17 | Detection of adulteration in food products                   |
| 18 | Detection / Estimation of some additives in foods            |

**Course Assessment Method  
(CIE: 50 marks, ESE: 50 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Preparation/Pre-Lab Work experiments,<br>Viva and Timely<br>completion of Lab Reports / Record<br>(Continuous Assessment) | Internal<br>Examination | Total |
|------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------|-------|
| 5          | 25                                                                                                                        | 20                      | 50    |

**End Semester Examination Marks (ESE):**

| Procedure/<br>Preparatory<br>work/Design/<br>Algorithm | Conduct of experiment/<br>Execution of work/<br>troubleshooting/<br>Programming | Result with valid<br>inference/<br>Quality of<br>Output | Viva<br>voce | Record | Total |
|--------------------------------------------------------|---------------------------------------------------------------------------------|---------------------------------------------------------|--------------|--------|-------|
| 10                                                     | 15                                                                              | 10                                                      | 10           | 5      | 50    |

- **Submission of Record:** Students shall be allowed for the end semester examination only upon submitting the duly certified record.
- **Endorsement by External Examiner:** The external examiner shall endorse the record

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                               | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------|------------------------------|
| CO1            | Students will be able to estimate the moisture content in food                | K3                           |
| CO2            | Understand the biochemical reactions in food components                       | K3                           |
| CO3            | Demonstrate the knowledge on chemical properties of food components           | K3                           |
| CO4            | Evaluate and interpret food analysis data and scientifically communicate this | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## CO- PO Mapping (Mapping of Course Outcomes with Program Outcomes)

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 2   | 2   |     |     |     |     | 1   | 1   | 2   |      |      | 1    |
| CO2 | 2   | 2   |     |     |     |     | 1   | 1   | 2   |      |      | 1    |
| CO3 | 2   | 2   |     |     |     |     | 1   | 1   | 2   |      |      | 1    |

| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | GDMAT301        | <b>Course Type</b> | Theory         |

**Course Objectives:**

To provide a comprehensive understanding of the concepts of population and sample distinctions, interval estimation, hypothesis testing, the method of least squares for regression, and ANOVA for variance analysis and to apply them in practical applications across various fields.

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Population and sample, The sample mean, Population mean and variance, The central limit theorem – Distribution of sum of random variables, Approximate distribution of the sample mean, Sample variance and sample standard deviation.<br>[Text 1: Relevant topics from sections 6.1,6.2,6.3, 6.3.1,6.3.2, 6.4]                                                | <b>9</b>             |
| <b>2</b>          | Interval estimation of population mean - Two sided confidence interval, One-sided lower and upper confidence intervals, Confidence interval for the mean when the variance is unknown, Confidence intervals for the variance of a normal distribution.<br>[Text 1: Relevant topics from sections 7.3, 7.3.1, 7.3.3]                                            | <b>9</b>             |
| <b>3</b>          | Hypothesis testing, Significance levels, Null hypothesis, Critical region, Type I and Type II error, Testing of mean of a normal population – Case of known variance, One sided tests; Testing of mean of a normal population- Case of unknown variance, One sided <i>t</i> - test.<br>[Text 1: Relevant topics from sections 8.1, 8.2, 8.3.1, 8.3.1.1, 8.3.2] | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                             |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | The method of least squares-regression line, Multiple regression (for two independent variables only), Analysis of variance, Completely randomized design (One-way ANOVA), Randomized-block design (Two-way ANOVA).<br>[Text 2: Relevant topics from sections 11.1, 11.4, 12.1, 12.2, 12.3] | <b>9</b> |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand population and sample distinctions, calculate means and variances and to apply the central limit theorem to distributions of sums of random variables.                                                                                            | <b>K3</b>                    |
| <b>CO2</b>     | Construct interval estimates for population means using two-sided and one-sided confidence intervals, to determine confidence intervals for the mean with unknown variance, and to calculate confidence intervals for the variance of a normal distribution. | <b>K3</b>                    |
| <b>CO3</b>     | Understand the basic concepts of hypothesis tests and to apply them in testing means of normal populations with known and unknown variances.                                                                                                                 | <b>K3</b>                    |
| <b>CO4</b>     | Apply the method of least squares to determine regression lines to conduct multiple regression analysis for two independent variables and to perform analysis of variance (ANOVA) including completely randomized and randomized-block designs.              | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

## SEMESTER S4

### HEAT AND MASS TRANSFER IN FOOD PROCESSING

(Common to FT Branches D Group/Groups)

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT402</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:1:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Identify the important modes of heat transfer and their applications.
2. Impart the knowledge of various mass transfer operation related with food processing.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Mechanisms and modes of heat transfer:-</b> conduction and Fourier law – Thermal conductivity of food products, General Heat conduction Equation, Heat conduction in Plane wall, cylinder, sphere for single and composite resistances, Critical Thickness of Insulation – wall, cylinder, and sphere (Basic numerical problems).                                                                                                                                                                    | <b>11</b>            |
| <b>2</b>          | <b>Basics and concepts, Types of Convection:-</b> Free convection – Forced Convection, heat transfer coefficient, and overall heat transfer coefficient, factors affecting heat transfer coefficients, Types of Boiling and Condensation. Importance of boilers and condensers in the food industry, dimensionless numbers used in heat transfer.<br><br>Radiation heat transfer- Basic Concepts, Laws of Radiation – Stefan Boltzmann Law, Kirchoff Law, Weins displacement law, Black Body Radiation. | <b>11</b>            |
| <b>3</b>          | <b>Molecular diffusion:-</b> Fick's Law, concentration, mass flux, Steady State molecular diffusion of A through stagnant gas B and equimolar counter diffusion in liquids, Application; Mass Transfer coefficients: Types of mass Transfer Coefficient, Dimensionless Groups in Mass Transfer, types of                                                                                                                                                                                                | <b>11</b>            |

## SEMESTER S4

### PROCESSING OF CEREALS, PULSES AND OILSEEDS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT403</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:1:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To study various properties and functions of cereals pulses and oilseeds
2. To acquire knowledge on various unit operations involved in processing of cereals, pulses and oilseeds

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Status of grain processing industries in India:</b> – rice- varieties- nutrient composition, Parboiling – physicochemical changes during parboiling modern methods of parboiling- Rice milling – equipment involved in the rice milling processing – Cleaner – Stoner – Husker- Separator- Whitening machine, Wheat - nutrient composition – classification of wheat - Milling of wheat - equipment used in milling – break roll – reduction roll- purifier – plan sifter – scalping - scratch system, Types of wheat. | <b>11</b>            |
| <b>2</b>          | <b>Barley:</b> – Nutrient composition – Commercial production of malt, Milling of corn -Dry milling and wet milling- Gluten and starch separation – enzyme hydrolysis – acid hydrolysis- Processing of oats- Processing of Millets- Processing of Pulses- antinutritional factors in pulses- Dhal mill                                                                                                                                                                                                                    | <b>11</b>            |
| <b>3</b>          | <b>Value added products from Cereals:-</b> Processing of breakfast cereals – processing of extruded products (noodles and pasta) - bread - Processing of protein isolates, flaked products-puffed snacks, HFCS - Processing of special dietary foods                                                                                                                                                                                                                                                                      | <b>11</b>            |
| <b>4</b>          | <b>Milling of oilseeds:-</b> mechanical expression, screw press, hydraulic press, solvent extraction methods, preconditioning of oilseeds, refining of oil, stabilization of rice bran.- Processing of soya bean- Storage structure- Bag storage, Cover and plinth, CAP storage (Ceiling and Plinth Storage)- Silos and large bins - Silos flow pattern.                                                                                                                                                                  | <b>11</b>            |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|------------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                           | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                   | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|-----------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Explain the processing technology of rice                                         | <b>K2</b>                          |
| <b>CO2</b>     | Describe the processing technology of wheat                                       | <b>K2</b>                          |
| <b>CO3</b>     | Illustrate the processing of value added products from cereals                    | <b>K2</b>                          |
| <b>CO4</b>     | Explain the extraction of oil from oilseeds                                       | <b>K2</b>                          |
| <b>CO5</b>     | Evaluate the suitability of different storage structures for specific grain types | <b>K4</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**SEMESTER S4**  
**FOOD ANALYSIS**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PBFTT404</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 4               | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 3:0:0:1         | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | 4               | <b>Course Type</b> | Theory         |

**Course Objectives:**

1. Introduce the basic concepts of Food Analysis, and explain the principles behind sampling and proximate analysis.
2. Familiarize the regulations by Government agencies based on the analysis of food.
3. Strengthen the knowledge about the different equipment and techniques employed in food analysis.

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                           | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to food analysis, significance, FSSAI regulations for food analysis, Sampling and sampling plan in relation to food analysis, AOAC, NABL Accreditation, Export Inspect Council<br>Proximate Analysis – Moisture, Ash, Fiber                                                                                                                                                              | <b>9</b>             |
| <b>2</b>          | Proximate Analysis –Carbohydrates, Protein,Protein Quality<br>Fat analysis – method of analysis, oxidation test for fat<br>methods, modern analytical techniques for proximate analysis<br>Protein separation techniques – Electrophoresis – principle. Types of electrophoresis – capillary electrophoresis, Gel electrophoresis – PAGE and SDS PAGE, 1Dimensional and 2-Dimensional electrophoresis | <b>9</b>             |
| <b>3</b>          | Spectroscopy – principles, Beer Lambert’s law- deviation from Beer lambert’s law, construction of calibration curve, UV Visible spectroscopy. Fluorescence spectroscopy. Atomic Absorption and emission spectroscopy,                                                                                                                                                                                 | <b>9</b>             |
| <b>4</b>          | Chromatography – Principles of chromatography column chromatography, Gel filtration chromatography, GLC, HPLC, Supercritical fluid chromatography                                                                                                                                                                                                                                                     | <b>9</b>             |

**Suggestion on Project Topics**

1. Identify any one of the food products from market and check for its label for nutritional value and health claim if any
2. Identify the official method of analysis protocol – AOAC, FSSAI Method
3. Conduct the proximate analysis of selected food – moisture, ash, protein, fat, carbohydrate, fiber
4. Evaluate the rancidity study – peroxide value, acid number of oil, saponification value
5. Conduct the shelf-life analysis and sensory analysis of food product
6. Identify the methods available for spectroscopy and chromatography for the specific analysis of food
7. Refer FSSAI standard for the food product from FSSAI regulations
8. Compare the result of your analysis with FSSAI standards and infer the result
9. Prepare a project report and present the results.

**Course Assessment Method**  
**(CIE: 60 marks, ESE: 40 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Project | Internal Ex-1 | Internal Ex-2 | Total |
|------------|---------|---------------|---------------|-------|
| 5          | 30      | 12.5          | 12.5          | 60    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                    | Part B                                                                                                                                                                                          | Total |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 2 marks<br/>(8x2 =16 marks)</li></ul> | 2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 2 sub divisions. Each question carries 6 marks.<br>(4x6 = 24 marks) | 40    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------|------------------------------|
| CO1            | To be familiar with the Government Regulations pertaining to Food Analysis               | K1                           |
| CO2            | Identify the different methodologies employed in proper sampling of food                 | K2                           |
| CO3            | Review the principles behind the analysis of various food components                     | K2                           |
| CO4            | To recognise the different techniques employed for analysis of components in food        | K3                           |
| CO5            | To gain knowledge of the instrumentation and working of equipment used for Food Analysis | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create  
**CO-PO Mapping Table:**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 2   |     |     |     |     | 1   |     | 1   |     |      |      |      |
| CO2 | 3   |     |     | 1   |     |     |     | 1   |     |      |      | 2    |
| CO3 | 3   | 2   | 1   |     |     |     |     |     |     |      |      | 2    |
| CO4 | 2   |     |     |     |     |     | 1   |     |     |      |      |      |
| CO5 | 2   |     |     |     | 1   |     |     |     |     |      |      |      |

| Text Books |                                                      |                         |                       |                  |

| 1             | Project Planning and Proposal                                       | 5                     |
| 2             | Contribution in Progress Presentations and Question Answer Sessions | 4                     |
| 3             | Involvement in the project work and Team Work                       | 3                     |
| 4             | Execution and Implementation                                        | 10                    |
| 5             | Final Presentations                                                 | 5                     |
| 6             | Project Quality, Innovation and Creativity                          | 3                     |
| <b>Total</b>  |                                                                     | <b>30</b>             |

### **1. Project Planning and Proposal (5 Marks)**

- Clarity and feasibility of the project plan
- Research and background understanding
- Defined objectives and methodology

### **2. Contribution in Progress Presentation and Question Answer Sessions (4 Marks)**

- Individual contribution to the presentation
- Effectiveness in answering questions and handling feedback

### **3. Involvement in the Project Work and Team Work (3 Marks)**

- Active participation and individual contribution
- Teamwork and collaboration

### **4. Execution and Implementation (10 Marks)**

- Adherence to the project timeline and milestones
- Application of theoretical knowledge and problem-solving
- Final Result

### **5. Final Presentation (5 Marks)**

- Quality and clarity of the overall presentation
- Individual contribution to the presentation
- Effectiveness in answering questions

**6. Project Quality, Innovation, and Creativity (3 Marks)**

- Overall quality and technical excellence of the project
- Innovation and originality in the project

Creativity in solutions and approaches

## SEMESTER S4

### FOOD PRODUCT DESIGN AND DEVELOPMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT411</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquire knowledge about food product development process
2. To analyse various concepts about food product commercialization

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Concept behind food product design and development process :-</b> Concept of product development, product success and failure, factors for success- Market survey process for product development, managing for product's success- Innovation strategy -possibilities for innovation, building up strategy, product development programme. Stages of product development process - product life cycle                | <b>9</b>             |
| <b>2</b>          | <b>Food product commercialization:-</b> product launch and evaluation, Technology, knowledge and the food system, knowledge management, knowledge for the conversion of raw material properties, equipment needed. Role of consumers in product development - consumer behaviour, Food preferences, Avoiding and acceptance of consumers, Integration of consumer needs in product development.                         | <b>9</b>             |
| <b>3</b>          | <b>Principles of product development management:-</b> People in product development management, Establishing outcomes, budgets and constraints.Improving the product development process - key message, evaluating product development, innovative matrices, striving for continuous improvement, Improving success potential of new products, market exploration and acquisition, Legal aspects of new product launch. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                              |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Product Stability:-</b> Evaluation of shelf life; changes in sensory attributes and effects of environmental conditions; accelerated shelf-life determination; developing packaging systems for maximum stability and cost effectiveness; interaction of package with food; Regulatory Aspects; whether standard product and conformation to standards; Approval for Proprietary Product. | <b>9</b> |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method (CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|--------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                            | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                        | <b>Part B</b>                                                                                                                                                                                                                                                                                         | <b>Total</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p align="center"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p align="center"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| <b>Course Outcome</b> |                                                                                                                                                                                                     | <b>Bloom's<br/>Knowledge<br/>Level (KL)</b> |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>CO1</b>            | Explain the basic concept of product development and innovation strategy                                                                                                                            | <b>K2</b>                                   |
| <b>CO2</b>            | Apply the concept of Product Development Process in real life by product commercialisation.                                                                                                         | <b>K3</b>                                   |
| <b>CO3</b>            | Describe the role and behaviour of consumer in Product Development                                                                                                                                  | <b>K2</b>                                   |
| <b>CO4</b>            | Restate the establishment out comes, budget and constraints in product development                                                                                                                  | <b>K1</b>                                   |
| <b>CO5</b>            | Analyse product development strategies to optimize packaged food stability through advanced packaging systems and environmental controls, integrating sensory attributes and regulatory compliance. | <b>K3</b>                                   |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

#### Course Objectives:

1. Develop proficiency in fundamental baking techniques such as dough preparation, fermentation processes, and baking temperatures to consistently produce high-quality bread and pastry products.
2. Acquire advanced skills in confectionery, including tempering chocolate, creating intricate sugar decorations, and mastering techniques for producing a variety of candies and chocolates with different textures and flavors.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |

|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Basics of Molecular Biology:</b> – Chemical nature of the genetic material - DNA, RNA and proteins, DNA replication, transcription and translation in prokaryotes. Application of enzymes in bakery, meat, fruit, vegetable and dairy Industries                                                                 | <b>9</b>             |
| <b>2</b>          | <b>Expression of foreign genes:-</b> Promoter enzymes; Recombinant DNA technology: Restriction enzymes, cloning vectors, Basics of strain improvement techniques, cloning procedure, cloning of specific gene and their identification.                                                                             | <b>9</b>             |
| <b>3</b>          | <b>Fermented Foods:-</b> Dairy products, Oriental fermentations, Alcoholic Beverages. Process of production of commercially important organic acids- Citric Acid, Lactic Acid, Amino acids- glutamic acid, lysine. Bioproducts for food industries- SCP, Mushroom. Natural Bio preservatives -Nisin.                | <b>9</b>             |
| <b>4</b>          | <b>Concepts working, significance of Nutrigenomics</b> Nutraceuticals and Functional Foods. Genetically Modified Foods- Plant and Animal origin. Ethical issues concerning GM Foods, testing for Genetically modified organisms, labeling and traceability, Biosafety- Public perception of GM foods, GMO Act- 2004 | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|------------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                           | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                 | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Understand the basic principles of molecular biology and applications of enzymes in food                                        | <b>K2</b>                          |
| <b>CO2</b>     | Comprehend the fermentation processes and their applications in the production of food additives, enzymes, and other metabolite | <b>K2</b>                          |
| <b>CO3</b>     | Apply different recombinant DNA techniques used in the development of genetically modified foods.                               | <b>K3</b>                          |
| <b>CO4</b>     | Analyze the potential risks and benefits of biotechnological advancements in the food industry.                                 | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     | 2   | 2   | 1   |     |      |      |      |
| <b>CO2</b> | 2   |     | 2   |     |     | 2   | 2   |     |     |      |      |      |
| <b>CO3</b> | 2   | 2   | 2   |     |     | 2   | 2   | 2   |     |      |      |      |
| <b>CO4</b> | 3   | 2   | 2   |     |     |     | 2   | 2   |     |      |      |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

| <b>Text Books</b> |                                             |                             |                                                    |                         |

## SEMESTER S4

### REFRIGERATION AND COLD CHAIN

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT414</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To study the application of various air conditioning and refrigeration systems in food industry
2. To understand psychrometric terms and cold chain processes and their application in food processing

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Basics of Refrigeration and Air-conditioning:</b> Refrigeration-units of refrigeration - COP- Reversed Carnot cycle T-S diagram – P-H chart; Types of refrigerants and their properties; commonly used refrigerants; Psychrometric properties-psychrometric chart; Saturation line-relative humidity line-constant specific volume lines – constant thermodynamic wet bulb temperature lines-constant enthalpy lines. | <b>9</b>             |
| <b>2</b>          | <b>Refrigeration Components:</b> Compressor -Reciprocating, Rotary and Centrifugal Compressors. Condenser- Aircooled& watercooled; Evaporative condensers- Cooling tower, Spray Pond. Evaporator-Classification-Flooded evaporator-Dry expansion evaporator. Refrigeration Controls: Low and high side float valves, capillary tube, thermostatic expansion valve, automatic expansion valve.                            | <b>9</b>             |
| <b>3</b>          | <b>Refrigeration &amp; AC systems:-</b> Simple vapour compression and vapour absorption. Industrially used refrigeration systems .Three fluid refrigeration, Lithium Bromide Refrigeration System .Cryogenics-Cryogenic Freezers. Air Conditioning-Human and Industrial air conditioning systems                                                                                                                         | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                  |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Cold chain:-</b> Need for cold chain- shelf- life- Q10 Value - just -in-time deliveries. Temperature limits Chilling and freezing injury, cold – shortening; PPP and TTT concepts. Temperature monitoring: Temperature-time indicators and correlation-Transportation regulations-Role of packaging in cold chain-Thaw Indicators-Cooling Load-Cold storages. | <b>9</b> |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|--------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                            | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| <b>Course Outcome</b> |                                                                                                      | <b>Bloom's<br/>Knowledge<br/>Level (KL)</b> |
|-----------------------|------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>CO1</b>            | Familiarize concepts of basic refrigeration cycles, Air conditioning and psychrometry                | <b>K2</b>                                   |
| <b>CO2</b>            | Identify the components of Refrigeration system and compare different types of refrigeration systems | <b>K3</b>                                   |
| <b>CO3</b>            | Identify the components of Air Conditioning and compare different types of Air conditioning systems  | <b>K3</b>                                   |
| <b>CO4</b>            | Analyse the components of cold chain                                                                 | <b>K3</b>                                   |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S4

### EXTENSION AND TRANSFER OF TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT416</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To develop knowledge of extension and technology transfer with respect to food processing.
2. To understand the role of intellectual property legislation in the food business and also learn how to manage the production, processing, and marketing of food and agricultural products.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                        | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction:</b> Current technologies and practices in food processing sector, Value chain in Food processing sector, Product process service, Study of market/ research, Marketing channel, Food business stakeholders, Market size barriers, Players in the Indian food industry                                                                             | <b>9</b>             |
| <b>2</b>          | <b>Strategy:</b> Strategy- Nash equilibrium. Social, environmental, legal obligation for technology, Intellectual Property Rights, WIPO, Intellectual Properties: Patent, Trademarks, Copyright, Geographical Indications. Filing Process and Procedures in India                                                                                                  | <b>9</b>             |
| <b>3</b>          | <b>Positioning:</b> Positioning the technology for the end user, Hypothesis- Types and characteristics, Procedure for testing hypothesis, SWOT Analysis, Determine strength weakness, opportunities and threats.                                                                                                                                                   | <b>9</b>             |
| <b>4</b>          | <b>Prototype:</b> Design of prototype, testing – Quality standards, Finding the target, Market alignment, Technology alignment, Risk analysis, Revenue expense valuation Evaluation of technology: Inventory management, EOQ, EBQ, ABC and VED analysis, CPM and PERT network analysis, Role of Government and non-Government organizations in technology transfer | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|------------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                           | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                          | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|--------------------------------------------------------------------------|------------------------------------|
| CO1            | Explain the current technologies and practices in food processing sector | K2                                 |
| CO2            | Describe different strategies in food business                           | K2                                 |
| CO3            | Explain how to position a technology for the end user                    | K2                                 |
| CO4            | Understand different technology and market alignment techniques          | K2                                 |
| CO5            | Elaborate on different technology evaluation methods                     | K2                                 |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Students will learn to identify major classes of phytochemicals present in commonly consumed foods, such as flavonoids, carotenoids, and phenolic acids.
2. Students will investigate how various food processing techniques affect the concentration and bioavailability of phytochemicals in foods.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                          | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction:</b> Introduction to a variety of food plants & health promotion, Methods used to study connections between phytochemicals and health, ROS and Antioxidant hypothesis, Total antioxidant activity assays, Methods to study phytochemicals and health promotion. Introduction, morphological, microscopical, physical, chemical, biological analysis of herbal drugs. | <b>9</b>             |
| <b>2</b>          | <b>Introduction to different sugars, organic acids and soluble fibres:</b> Sugars, Soluble fibres, Ascorbic acid, Other organic acids, Amino acids. Flavonoids, anthocyanins and polyphenolics - Flavonoid biosynthesis, Anthocyanins, Condensed tannins, Tea polyphenolics, Adulteration of crude drugs and their detection by evaluation methods.                                  | <b>9</b>             |
| <b>3</b>          | <b>Types, functions and mode of action of different fats and oils:</b> Carotenoids, Seed oils, Terpenoids, Glucosinates Alkaloids and Seed storage proteins- Alkaloids – Capsaicinoids, Alkaloids – Caffeine, Essential amino acids, Seed storage proteins, Plant-Animal interactions                                                                                                | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Different alkaloids and their mode of action:</b> Morphine and a brief account of its derivatives and analogues, Ergot alkaloids and semisynthetic derivatives, Caffeine and Theophylline, Reserpine, Quinine and Quinidine, Atropine, Hyoscyamine and Scopolamine, Structure and use of Homatropine. Vincristine and Vinblastine, Taxol, Camptothecin, Podophyllotoxin and Semi-synthetic derivatives of these compounds, Quality control of herbal drugs as per WHO Guidelines. | <b>9</b> |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total     |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-----------|
| <b>5</b>   | <b>15</b>                   | <b>10</b>                              | <b>10</b>                                | <b>40</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                            | Part B                                                                                                                                                                                                                                                                           | Total     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                         | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|-------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Learn the methods used to study phytochemicals and health.              | <b>K1</b>                          |
| <b>CO2</b>     | Gain knowledge on different sugars, organic acids and soluble fibres.   | <b>K2</b>                          |
| <b>CO3</b>     | Gain knowledge about different alkaloids and their mode of action.      | <b>K3</b>                          |
| <b>CO4</b>     | Gain knowledge on quality control of herbal drugs as per WHO guidelines | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

## SEMESTER S4

### SPICES AND PLANTATION CROPS TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT418</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Familiarize the students about the processing techniques of various major and minor spices, coffee and tea, cocoa and cocoa products
2. To gain the knowledge on quality analysis, grading and packaging of spices

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Major spices</b> :- Post Harvest Technology, composition, processed products of - Pepper, Cardamom, onion, ginger and turmeric – Oleoresins and essential oils – Method of manufacture – Chemistry of the volatiles – Enzymatic synthesis of flavour identical - Quality control, Flavour of major spices - Spice oil and oleoresins                                                                                                                                                                                                                                                                         | <b>9</b>             |
| <b>2</b>          | <b>Minor spices</b> :- Post Harvest Technology, composition, processed products of - Cumin, Coriander, Cinnamon, fenugreek, pepper, Garlic, Clove and Vanilla - Oleoresins and essential oils – Method of manufacture – Chemistry of the volatiles – flavours, Quality control.                                                                                                                                                                                                                                                                                                                                 | <b>9</b>             |
| <b>3</b>          | <b>Tea</b> :- Occurrence – chemistry of constituents – harvesting – types of tea – green, oolong tea etc – Chemistry and technology of CTC tea – Manufacturing process and equipment involved – Green tea manufacture – Instant tea manufacture – Grading of tea, Processing and quality control.<br><b>Coffee</b> :- Occurrence –harvesting – fermentation of coffee beans – changes taking place during fermentation – drying – roasting – Process flow sheet for the manufacture of coffee powder – Instant coffee, methods, process, and equipment involved– Chicory chemistry - Quality grading of coffee. | <b>9</b>             |
| <b>4</b>          | <b>Chemistry of the cocoa bean</b> :- changes taking place during fermentation of cocoa bean – Processing of cocoa bean – cocoa powder – cocoa liquor manufacture Chocolates – Types – Chemistry and technology of chocolate                                                                                                                                                                                                                                                                                                                                                                                    | <b>9</b>             |

|  |                                                                                                                                                                                                                                                                                 |  |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|  | manufacture<br><b>Processing of plantation crops</b> :- production and importance – processing of coconut, oil-palm, arecanut, cashew– harvesting and stages of harvest – drying, cleaning and grading – production of value added products – packaging and storage of produces |  |
|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|------------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                           | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                 | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Understand the processing steps involved for different plantation crops                                         | <b>K1</b>                          |
| <b>CO2</b>     | Acquire knowledge on the processing of major and minor spices                                                   | <b>K1</b>                          |
| <b>CO3</b>     | Define the different unit operations and its equipment's involved in coffee, tea and cocoa processing           | <b>K2</b>                          |
| <b>CO4</b>     | Processing steps involved for cocoa and cocoa products and processing of coconut, oil palm, arecanut and cashew | <b>K2</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 2   | 2   |     |     |     | 2   |     |     |     |      |      |      |
| <b>CO2</b> | 2   | 2   |     |     |     | 1   |     |     |     |      |      | 2    |
| <b>CO3</b> | 2   | 2   |     |     |     | 1   |     |     |     |      |      | 2    |
| <b>CO4</b> | 2   | 2   |     |     |     | 1   |     |     |     |      |      |      |
| <b>CO5</b> |     |     |     |     |     |     |     |     |     |      |      |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

| <b>Text Books</b> |                                                                                                    |                                                                                        |                                |                         |

## SEMESTER S4

### UNIT OPERATIONS IN FOOD PROCESSING

|                                            |                        |                    |                |
|--------------------------------------------|------------------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT415</b>        | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0                | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 5/3                    | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None/<br>(Course code) | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquaint and equip the students with different unit operations of food industries and their design features

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <p><b>Size reduction:-</b> Benefits, classification, determination and designation of the fineness of ground material, sieve/screen analysis, principle and mechanisms of comminution of food,</p> <p>Rittinger's, Kick's and Bond's equations, work index, energy utilization; Size reduction equipment: Principal types, crushers (jaw crushers, gyratory, smooth roll), hammer mills and impactors, attrition mills, tumbling mills, ultra fine grinders, fluid jet pulverizer, cutting machines (slicing, dicing, shredding).</p> <p><b>Mixing of fluids:</b> – blending – types of blenders – flow patterns in fluid mixing – energy input in fluid mixing - kneading – in flow mixing -mixing of particulate solids – mixing and segregation – quality of mixing – mixedness – emulsification and homogenization -equipments</p> | <b>9</b>             |
| <b>2</b>          | <p><b>Filtration:</b> – filter media – types and requirements - constant rate filtration – constant pressure filtration – filter cake resistance - filtration equipments – filter aids – expression – introduction – mechanisms – applications and equipment.</p> <p><b>Membrane separation:-</b> General considerations, materials for membrane construction, ultra-filtration, processing variables, membrane fouling, applications of ultra-filtration in food processing, reverse osmosis, mode of operation, and applications; Membrane separation methods, demineralization by electro-dialysis, gel filtration, ion exchange, per-evaporation and micro filtration</p>                                                                                                                                                          | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 3 | <p><b>Food freezing:-</b> Introduction, freezing point curve for food and water, freezing points of common food materials, Principles of food freezing, freezing time calculation by using Plank's equation; Freezing systems; Direct contact systems, air blast immersion; Changes in foods; Frozen food properties; freezing time, factors influencing freezing time ,freezing/thawing time; Freeze concentration: Principles, process, methods; Frozen food storage: Quality changes in foods during frozen storage; Freeze drying: Heat mass transfer during freeze drying, equipment and practice.</p> <p><b>Dehydration:-</b> Thermodynamics of moist air – Convective drying – drying curve- constant rate – falling rate – total drying time – Conductive drying – Dryers in the food processing industry – Cabinet, tunnel, belt, belt – trough, rotary – spray dryers – Fluidized bed dryer – Pneumatic dryer – drum dryer, sun, solar drying – Issues in food drying technology.</p> | 9 |
| 4 | <p><b>Extraction:-</b> solid – liquid extraction (leaching) – material balance – equilibrium – multistage extraction – stage efficiency – solid – liquid extraction systems – Super Critical Fluid extraction – principles – solvents – Super critical extraction systems – application – Liquid – liquid extraction – principle – application</p> <p><b>Evaporation:-</b> Principles of evaporation, mass and energy balance, factors affecting rate of evaporation, Heat and mass transfer in evaporator, factors influencing the overall heat transfer coefficient, influence of feed liquor properties on evaporation; Evaporation equipment: Natural circulation evaporators, horizontal/vertical short tube, long tube, forced circulation; single effect, multiple effect evaporators, feeding methods of multiple effect evaporation systems, feed preheating,; Fouling of evaporators and heat exchanges; Recompression heat and mass recovery and vacuum creating devices.</p>        | 9 |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|------------------------------|----------------------------------------|------------------------------------------|-------|

## SEMESTER S3/S4

### ECONOMICS FOR ENGINEERS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>UCHUT346</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 2:0:0:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students with an understanding of fundamental economic principles essential for effective decision-making in engineering contexts.
2. To enable students to apply economic analysis to production decisions, cost management, and market strategies in engineering practice.
3. To equip students with the ability to evaluate macroeconomic scenarios, financial methods, and investment decisions relevant to engineering projects.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Basic economic problems – Production Possibility Curve – Utility – Law of diminishing marginal utility –Demand: Factors determining demand – Law of Demand – Demand curve- Price elasticity of demand- measurement of price elasticity and its applications – Supply: factors determining supply - Law of supply – Supply curve- Equilibrium price determination- Changes in demand and supply and its effects on equilibrium price and quantity<br><br>Production: Production function - Law of variable proportion –Returns to scale- Cobb-Douglas Production Function | <b>6</b>             |
| <b>2</b>          | Cost: Cost concepts – Private cost and social cost – Sunk cost – Opportunity cost -Explicit and implicit cost –Short run cost curves –Long run average cost curve -Revenue concepts – Break-even point<br><br>Market: Perfect Competition – Monopoly - Monopolistic Competition (features and equilibrium of a firm) - Oligopoly – Features – Kinked demand model                                                                                                                                                                                                        | <b>6</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                      |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | National income: Concepts (GDP, GNP and NNP)– Final goods and Intermediate goods - Methods of Estimation –output method – expenditure method-- Difficulties in the measurement of national income.<br><br>Inflation: Causes and Effects – Measures to Control Inflation - Monetary and Fiscal policies – Repo and reverse repo rate                  | <b>6</b> |
| <b>4</b> | Value Analysis and value Engineering: Cost Value, Exchange Value, Use Value, Esteem Value - Aims, Advantages and Application areas of Value Engineering - Value Engineering Procedure<br><br>Capital Budgeting: Time value of money - Net Present Value Method - Benefit Cost Ratio – Internal Rate of Return – Payback – Accounting Rate of Return. | <b>6</b> |

**Course Assessment Method**  
(CIE: 50 marks, ESE: 50 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/Case Study/<br/>Microproject</b> | <b>Internal Examination-1<br/>(Written)</b> | <b>Internal Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|------------------------------------------------|---------------------------------------------|-----------------------------------------------|--------------|
| <b>10</b>         | <b>15</b>                                      | <b>12.5</b>                                 | <b>12.5</b>                                   | <b>50</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                  | <b>Part B</b>                                                                                                                                                                                   | <b>Total</b> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• Minimum 1 and Maximum 2 Questions from each module.</li> <li>• Total of 6 Questions, each carrying 3 marks (6x3 =18 marks)</li> </ul> | 2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 2 sub divisions. Each question carries 8 marks.<br>(4x8 = 32 marks) | <b>50</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                 | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of various economic issues using laws and learn the concepts of demand, supply, elasticity and production function.                                 | <b>K2</b>                    |
| <b>CO2</b>     | Develop decision making capability by applying concepts relating to costs and revenue, and acquire knowledge regarding the functioning of firms in different market situations. | <b>K3</b>                    |
| <b>CO3</b>     | Outline the macroeconomic principles of monetary and fiscal systems and national income.                                                                                        | <b>K2</b>                    |
| <b>CO4</b>     | Make use of the possibilities of value analysis and engineering, and take investment decisions through capital budgeting techniques.                                            | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

| Answer any one full question from each module. Each question carries 8 marks |        |                                                                                                                                                                                                     |                              |       |
| Module 1                                                                     |        |                                                                                                                                                                                                     |                              |       |
| 9                                                                            | a)     | Suppose a country is producing at a point inside the production possibility curve. Draw a PPC and examine this situation.                                                                           | CO1                          | (5)   |
|                                                                              | b)     | State the law of demand. Point out any two exceptions of this law.                                                                                                                                  | CO1                          | (3)   |
| 10                                                                           | a)     | A consumer purchases 10 units of a commodity when its price is Rs.100. Later when its price falls to Rs.90, he purchases 8 units only. Estimate price elasticity. What type of a commodity is this? | CO1                          | (5)   |
|                                                                              | b)     | State the law of variable proportion.                                                                                                                                                               | CO1                          | (3)   |

| Module 2 |    |                                                                                                                                                                                                                                                                                      |     |     |
|----------|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 11       | a) | What is oligopoly? Why price is rigid under oligopoly?                                                                                                                                                                                                                               | CO2 | (5) |
|          | b) | The cost function of a firm is given as $TC=1000+10Q-6Q^2+Q^3$ . Calculate fixed cost, variable cost and marginal cost when output is 10 units.                                                                                                                                      | CO2 | (3) |
| 12       | a) | Suppose a firm is earning super normal profit under monopolistic market condition. Explain this situation by drawing a diagram.                                                                                                                                                      | CO2 | (5) |
|          | b) | Suppose a firm sells its product at a price of Rs.10 per unit and its average variable cost is Rs.6. If the firm spend Ra.10000 as rent and pay Rs. 6000 as interest every month, estimate its break-even level of output.                                                           | CO2 | (3) |
| Module 3 |    |                                                                                                                                                                                                                                                                                      |     |     |
| 13       | a) | What is inflation? How does inflation affect investment and production.                                                                                                                                                                                                              | CO3 | (5) |
|          | b) | How will you obtain NNP <sub>fc</sub> from GDP <sub>mp</sub> .                                                                                                                                                                                                                       | CO3 | (3) |
| 14       | a) | From the data given below (In Rs. Crores) estimate GDP <sub>mp</sub> and national income.<br><br>Private final consumption expenditure = 1000, Government expenditure = 500, Invest expenditure = 700, Net exports = 300, Depreciation = 200, NFIA=(-200) and Net indirect tax = 100 | CO3 | (5) |
|          | b) | What is bank rate? Examine the bank rate policy of the government during inflation.                                                                                                                                                                                                  | CO3 | (3) |
| Module 4 |    |                                                                                                                                                                                                                                                                                      |     |     |
| 15       | a) | Examine the procedures of value engineering.                                                                                                                                                                                                                                         | CO4 | (5) |
|          | b) | Examine the application areas of value engineering                                                                                                                                                                                                                                   | CO4 | (3) |

|       |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |     |
|-------|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----|
| 16    | a) | 1. Suppose the initial investment of a project is Rs. 3000 (Crores) and the cost of capital or the opportunity cost of capital is 10 percent. Calculate NPV of the project based on the cash flows given below.<br><br>Year                      1                      2                      3                      4                      5<br><br>Cash flow                1000                900                800                700                600<br><br>(In Crores) | CO4 | (5) |
|       | b) | Point out any three merits of NPV method.                                                                                                                                                                                                                                                                                                                                                                                                                                          | CO4 | (3) |
| ***** |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |     |

## SEMESTER S3/S4

### ENGINEERING ETHICS AND SUSTAINABLE DEVELOPMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>UCHUT347</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 2:0:0:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Equip with the knowledge and skills to make ethical decisions and implement gender-sensitive practices in their professional lives.
2. Develop a holistic and comprehensive interdisciplinary approach to understanding engineering ethics principles from a perspective of environment protection and sustainable development.
3. Develop the ability to find strategies for implementing sustainable engineering solutions.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |

**Course Assessment Method  
(CIE: 50 marks , ESE: 50)**

**Continuous Internal Evaluation Marks (CIE):**

Continuous internal evaluation will be based on individual and group activities undertaken throughout the course and the portfolio created documenting their work and learning. The portfolio will include reflections, project reports, case studies, and all other relevant materials.

- The students should be grouped into groups of size 4 to 6 at the beginning of the semester. These groups can be the same ones they have formed in the previous semester.
- Activities are to be distributed between 2 class hours and 3 Self-study hours.
- The portfolio and reflective journal should be carried forward and displayed during the 7th Semester Seminar course as a part of the experience sharing regarding the skills developed through various courses.

| Sl. No.     | Item                                                                                                         | Particulars                                                                                                                                                                           | Group/Individual (G/I) | Marks     |

| 1           | Reflective Journal                                                                                           | Weekly entries reflecting on what was learned, personal insights, and how it can be applied to local contexts.                                                                        | I                      | 5         |
| 2           | Micro project<br>(Detailed documentation of the project, including methodologies, findings, and reflections) | 1 a) Perform an Engineering Ethics Case Study analysis and prepare a report<br>1 b) Conduct a literature survey on 'Code of Ethics for Engineers' and prepare a sample code of ethics | G                      | 8         |
|             |                                                                                                              | 2. Listen to a TED talk on a Gender-related topic, do a literature survey on that topic and make a report citing the relevant papers with a specific analysis of the Kerala context   | G                      | 5         |
|             |                                                                                                              | 3. Undertake a project study based on the concepts of sustainable development* - Module II, Module III & Module IV                                                                    | G                      | 12        |
| 3           | Activities                                                                                                   | 2. One activity* each from Module II, Module III & Module IV                                                                                                                          | G                      | 15        |
| 4           | Final Presentation                                                                                           | A comprehensive presentation summarising the key takeaways from the course, personal reflections, and proposed future actions based on the learnings.                                 | G                      | 5         |
| Total Marks |                                                                                                              |                                                                                                                                                                                       |                        | <b>50</b> |

\*Can be taken from the given sample activities/projects

**Evaluation Criteria:**

- **Depth of Analysis:** Quality and depth of reflections and analysis in project reports and case studies.
- **Application of Concepts:** Ability to apply course concepts to real-world problems and local contexts.
- **Creativity:** Innovative approaches and creative solutions proposed in projects and reflections.
- **Presentation Skills:** Clarity, coherence, and professionalism in the final presentation.

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Develop the ability to apply the principles of engineering ethics in their professional life.                                                | <b>K3</b>                    |
| <b>CO2</b>     | Develop the ability to exercise gender-sensitive practices in their professional lives                                                       | <b>K4</b>                    |
| <b>CO3</b>     | Develop the ability to explore contemporary environmental issues and sustainable practices.                                                  | <b>K5</b>                    |
| <b>CO4</b>     | Develop the ability to analyse the role of engineers in promoting sustainability and climate resilience.                                     | <b>K4</b>                    |
| <b>CO5</b>     | Develop interest and skills in addressing pertinent environmental and climate-related challenges through a sustainable engineering approach. | <b>K3</b>                    |

Note: *K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create*  
**CO-PO Mapping Table:**

| 7               | Ethics in Engineering                           | Mike W Martin and Roland Schinzinger,             | Tata McGraw Hill Publishing Company Pvt Ltd, New Delhi | 4 <sup>th</sup> edition, 2014 |

### Suggested Activities/Projects:

#### Module-II

- Write a reflection on a local environmental issue (e.g., plastic waste in Kerala backwaters or oceans) from different ethical perspectives (anthropocentric, biocentric, ecocentric).
- Write a life cycle analysis report of a common product used in Kerala (e.g., a coconut, bamboo or rubber-based product) and present findings on its sustainability.
- Create a sustainability report for a local business, assessing its environmental, social, and economic impacts
- Presentation on biodiversity in a nearby area (e.g., a local park, a wetland, mangroves, college campus etc) and propose conservation strategies to protect it.
- Develop a conservation plan for an endangered species found in Kerala.
- Analyze the green spaces in a local urban area and propose a plan to enhance urban ecology using native plants and sustainable design.
- Create a model of a sustainable urban landscape for a chosen locality in Kerala.

#### Module-III

- Study a local water body (e.g., a river or lake) for signs of pollution or natural flow disruption and suggest sustainable management and restoration practices.

- Analyse the effectiveness of water management in the college campus and propose improvements - calculate the water footprint, how to reduce the footprint, how to increase supply through rainwater harvesting, and how to decrease the supply-demand ratio
- Implement a zero waste initiative on the college campus for one week and document the challenges and outcomes.
- Develop a waste audit report for the campus. Suggest a plan for a zero-waste approach.
- Create a circular economy model for a common product used in Kerala (e.g., coconut oil, cloth etc).
- Design a product or service based on circular economy and degrowth principles and present a business plan.
- Develop a plan to improve pedestrian and cycling infrastructure in a chosen locality in Kerala

#### **Module-IV**

- Evaluate the potential for installing solar panels on the college campus including cost-benefit analysis and feasibility study.
- Analyse the energy consumption patterns of the college campus and propose sustainable alternatives to reduce consumption - What gadgets are being used? How can we reduce demand using energy-saving gadgets?
- Analyse a local infrastructure project for its climate resilience and suggest improvements.
- Analyse a specific environmental regulation in India (e.g., Coastal Regulation Zone) and its impact on local communities and ecosystems.
- Research and present a case study of a successful sustainable engineering project in Kerala/India (e.g., sustainable building design, water management project, infrastructure project).
- Research and present a case study of an unsustainable engineering project in Kerala/India highlighting design and implementation faults and possible corrections/alternatives (e.g., a housing complex with water logging, a water management project causing frequent floods, infrastructure project that affects surrounding landscapes or ecosystems).

## SEMESTER S4

### FOOD ANALYSIS AND QUALITY EVALUATION LAB

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL407</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0:0:3:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Lab            |

#### Course Objectives:

1. To develop the knowledge of students in the area of Food analysis
2. To evaluate different food products using various chemical analysis techniques.

| <b>Expt. No.</b> | <b>Experiments</b>                                                        |
|------------------|---------------------------------------------------------------------------|
| 1                | Determination of total ash content in food products                       |
| 2                | Determination of acid-insoluble ash and acid-soluble ash in food products |
| 3                | Determination of water-soluble and water-insoluble ash in food products   |
| 4                | Separation of amino acids by TLC.                                         |
| 5                | Estimation of the protein content of food by Lowry's method               |
| 6                | Determination of fat content of food by Soxhlet extraction method         |
| 7                | Determination of starch in food by Anthrone method                        |
| 8                | Determination of crude fiber content of food                              |
| 9                | Sensory evaluation of food sample – Descriptive and Discriminative method |
| 10               | Quality analysis of Beverages - tea/coffee/cocoa, chicory                 |
| 11               | Quality analysis of sugar and confectionery products                      |
| 12               | Quality analysis of fruit and vegetable products                          |
| 13               | Quality analysis of spices                                                |
| 14               | Quality analysis of fat and oils                                          |
| 15               | Quality analysis of fish and meat                                         |
| 16               | Quality analysis of milk and milk products                                |

|    |                                                                                  |
|----|----------------------------------------------------------------------------------|
| 17 | Quality analysis of cereal and cereal products                                   |
| 18 | Determination of Antioxidant activity of food by Spectroscopic method            |
| 19 | Determination of pigments present in food – chlorophyll/ carotenoid /anthocyanin |

**Course Assessment Method**  
**(CIE: 50 marks, ESE: 50 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Preparation/Pre-Lab Work experiments, Viva and Timely completion of Lab Reports / Record (Continuous Assessment) | Internal Examination | Total |
|------------|------------------------------------------------------------------------------------------------------------------|----------------------|-------|
| 5          | 25                                                                                                               | 20                   | 50    |

**End Semester Examination Marks (ESE):**

| Procedure/ Preparatory work/Design/ Algorithm | Conduct of experiment/ Execution of work/ troubleshooting/ Programming | Result with valid inference/ Quality of Output | Viva voce | Record | Total |
|-----------------------------------------------|------------------------------------------------------------------------|------------------------------------------------|-----------|--------|-------|
| 10                                            | 15                                                                     | 10                                             | 10        | 5      | 50    |

- *Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.*
- *Endorsement by External Examiner: The external examiner shall endorse the record*

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------|------------------------------|
| CO1            | To understand the principles behind food analysis                                            | K2                           |
| CO2            | To gain Knowledge of basic equipment for food sample analysis                                | K2                           |
| CO3            | Calculate and interpret nutrient composition of foods                                        | K2                           |
| CO4            | Evaluate data generated by experimental methods for quality evaluation of food sample        | K3                           |
| CO5            | Interpret the quality parameters of food sample in relation to food standards and regulation | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO- PO Mapping (Mapping of Course Outcomes with Program Outcomes)

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## **Continuous Assessment (25 Marks)**

### **1. Preparation and Pre-Lab Work (7 Marks)**

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

### **2. Conduct of Experiments (7 Marks)**

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

### **3. Lab Reports and Record Keeping (6 Marks)**

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

### **4. Viva Voce (5 Marks)**

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

***Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.***

## **Evaluation Pattern for End Semester Examination (50 Marks)**

### **1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)**

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.
- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.

- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

## **2. Conduct of Experiment/Execution of Work/Programming (15 Marks)**

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

## **3. Result with Valid Inference/Quality of Output (10 Marks)**

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

## **4. Viva Voce (10 Marks)**

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

## **5. Record (5 Marks)**

- Completeness, clarity, and accuracy of the lab record submitted

## SEMESTER S4

### FOOD PROCESS ENGINEERING LAB

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL408</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0:0:3:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Lab            |

#### Course Objectives:

1. To understand the principle behind the various food processing unit operations.

| <b>Expt. No.</b> | <b>Experiments</b>                                                                                                                                                                   |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                | Experimentation on the size reduction of food material using milling                                                                                                                 |
| 2                | Determination of Particle size distribution of food material using sieve analysis                                                                                                    |
| 3                | Development of Food Product using single screw extrusion                                                                                                                             |
| 4                | Determination of the rate of heat transfer and heat transfer coefficient of heat exchanger                                                                                           |
| 5                | Determination of rate of filtration for constant pressure filtration                                                                                                                 |
| 6                | Perform the simple distillation for studying separation of mixture                                                                                                                   |
| 7                | Determination of Mixing index of various Food samples                                                                                                                                |
| 8                | Experimentation of Pasteurisation of milk/ fruit juices and microbial inactivation                                                                                                   |
| 9                | Determination of the rate of drying for the given food grains in Rotary dryer                                                                                                        |
| 10               | Experimentation of Osmotic dehydration of food materials                                                                                                                             |
| 11               | Determination of the percentage of actual recovery for single stage leaching                                                                                                         |
| 12               | Determination of separation efficiency of an inclined belt separator                                                                                                                 |
| 13               | Experimentation on microwave heating of food materials                                                                                                                               |
| 14               | Experimentation on drying with a Fluidised bed dryer                                                                                                                                 |
| 15               | Verification of the applicability of Freundlich equation for adsorption for the given system and determination of the values of adsorption constants 'k' and 'n' at room temperature |
| 16               | Development of a food product using Freeze drying                                                                                                                                    |
| 17               | Determination of the separation efficiency of a spiral separator                                                                                                                     |
| 18               | Performance of a Spray dryer in food product development.                                                                                                                            |

**Course Assessment Method**  
**(CIE: 50 marks, ESE: 50 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Preparation/Pre-Lab Work experiments, Viva and Timely completion of Lab Reports / Record (Continuous Assessment) | Internal Examination | Total |
|------------|------------------------------------------------------------------------------------------------------------------|----------------------|-------|
| 5          | 25                                                                                                               | 20                   | 50    |

|-----------------------------------------------|------------------------------------------------------------------------|------------------------------------------------|-----------|--------|-------|
| 10                                            | 15                                                                     | 10                                             | 10        | 5      | 50    |

- *Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.*
- *Endorsement by External Examiner: The external examiner shall endorse the record*

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                                                                   | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Describe operational principles of milling equipment, dryers, extruders, heat exchangers, distillation, and separators in food engineering processes.                                                                             | K2                           |
| CO2            | Explain underlying concepts of particle size distribution analysis, heat transfer mechanisms, filtration principles, distillation processes, and adsorption dynamics in food engineering.                                         | K2                           |
| CO3            | Interpret experimental data from sieve analysis, heat transfer coefficients, filtration rates, adsorption constants, and separation efficiencies to assess process performance and equipment effectiveness in food engineering.   | K2                           |
| CO4            | Apply theoretical knowledge to operate and conduct experiments with milling equipment, dryers, extruders, distillation apparatus, and separators to achieve specific experimental goals in food engineering.                      | K3                           |
| CO5            | Conduct experiments in food engineering to determine fluidization velocity, settling velocity, and recovery curves, integrating theoretical principles with practical applications relevant to food processing and manufacturing. | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO- PO Mapping (Mapping of Course Outcomes with Program Outcomes)

## **Continuous Assessment (25 Marks)**

### **1. Preparation and Pre-Lab Work (7 Marks)**

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

### **2. Conduct of Experiments (7 Marks)**

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

### **3. Lab Reports and Record Keeping (6 Marks)**

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

### **4. Viva Voce (5 Marks)**

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

***Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.***

## **Evaluation Pattern for End Semester Examination (50 Marks)**

### **1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)**

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.
- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.

- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

## **2. Conduct of Experiment/Execution of Work/Programming (15 Marks)**

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

## **3. Result with Valid Inference/Quality of Output (10 Marks)**

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

## **4. Viva Voce (10 Marks)**

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

## **5. Record (5 Marks)**

- Completeness, clarity, and accuracy of the lab record submitted

# **SEMESTER 5**

## **FOOD TECHNOLOGY**

## SEMESTER S5

### PROCESSING OF FRUITS AND VEGETABLES

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT501</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 4:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

- 1.The students will gain knowledge about methods used for preserving fruits and vegetables.
- 2.Students will get a thorough Knowledge and understandings of the specific processing technologies used for different foods and the various products derived from these materials.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                       | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------|------------------------------|
| CO1            | To study the processing and preservation technologies of fruits and vegetables | K2                           |
| CO2            | To give knowledge on the value addition on fruit and vegetable                 | K2                           |
| CO3            | To give knowledge on the Processing technology of fruit beverages              | K3                           |
| CO4            | To give knowledge on the Fermented products from fruits and vegetables         | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S5

### PROCESSING OF MILK & MILK PRODUCTS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT502</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:1:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the production and processing of milk and milk products.
2. To familiarize with the technological advancements in milk industry.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                          | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Milk-Types-Composition-factors affecting composition of milk. Physical-Chemical and Thermal Properties- Reception and storage-cooling of milk - Cleaning-basic principles-can washing - can washers-cleaning-in centralised and decentralized CIP system - cleaning of various equipment.                                            | <b>11</b>            |
| <b>2</b>          | Pasteurization - principles, objectives and methods - LTLT/holding pasteurization-types, advantages and disadvantages - HTST pasteurization-components and function of HTST pasteurizer, advantages and disadvantages. Sterilization - In-bottle sterilization, UHT processing.                                                      | <b>11</b>            |
| <b>3</b>          | Homogenization theory, effects of homogenization of milk, Types of homogenizers-stages of homogenization-importance. Centrifugation-clarification-clarifiers and separators-separation efficiency- Bactofugation. New technologies in dairy industry-membrane separation- Ultrafiltration, Reverse osmosis process, electrodialysis. | <b>11</b>            |

|          |                                                                                                                                                                                                                      |           |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>4</b> | Technology of traditional Indian milk products- Khoa, Channa. Butter manufacture, cheese manufacture-methods. Basic principles of spray drying and roller drum drying- Skimmed milk powder, fermented milk products. | <b>11</b> |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Gain a thorough knowledge on the properties, reception and storage of milk in dairy industries.                                     | <b>K1</b>                    |
| <b>CO2</b>     | Get familiarized with the principle, importance and various methods of sterilization and pasteurization followed in dairy industry. | <b>K2</b>                    |
| <b>CO3</b>     | Study the effect of homogenization of milk and its efficiency                                                                       | <b>K2</b>                    |
| <b>CO4</b>     | Comprehend the importance of centrifugation and membrane separation in dairy industry                                               | <b>K2</b>                    |
| <b>CO5</b>     | Impart the ideas on the manufacture of different types of milk and milk products                                                    | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S5

### FOOD SAFETY AND QUALITY REGULATION

|                                            |                 |                    |               |
|--------------------------------------------|-----------------|--------------------|---------------|
| <b>Course Code</b>                         | <b>PCFTT503</b> | <b>CIE Marks</b>   | 40            |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60            |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hr. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory        |

#### Course Objectives:

1. This course will deal with the food safety, quality and regulations practiced in food industry.
2. The course will focus on providing graduate students with a detailed knowledge of risk analysis in food analysis.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | INTRODUCTION: Principles of food safety, need for food safety culture, consequences of unsafe food, challenges in food safety, recent statistics of foodborne illness, Design and construction of food premises, cleaning and disinfection facilities, Control of rats and rodents, insects and microbes, Personal hygiene,SOP,SSOP.<br>Hazard and risk analysis: Hazard, types, risk, risk analysis, risk assessment, food recall -significance food recall plan, allergen control plan, food traceability, significance, methods available. | <b>9</b>             |
| <b>2</b>          | Definition of food quality- ways for describing food quality, factors affecting food quality, Quality aspect in food supply chain and food processing industry Different quality control tools, Food authentication – significance, methods available for food authentication.                                                                                                                                                                                                                                                                | <b>9</b>             |
| <b>3</b>          | HACCP – History, introduction and significance, Principles of HACCP and steps in HACCP,HACCP worksheet – preparation with case study Significance, CCP determination, ISO, FSMS, TQM.<br>Food Standards and Specification –Global Food Safety Initiative, CODEX, CODEXINDIA, National Codex Committee of India, ToR,                                                                                                                                                                                                                          | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                               |   |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
|   | Shadow Committee FSSA 2006- its origin, Salient features of Act, Regulations, FSSAI, its activities for ensuring food safety in India, BIS, BRC, FAO, AGMARK, Other agencies involved in regulating food business.                                                                                                                                                                            |   |
| 4 | Risk assessment studies: Risk management, risk characterization and communication. Voluntary Quality Standards and Certification GMP, GHP, HACCP, GAP, Good Animal Husbandry Practices, Good Aquaculture Practices. An Overview and structure of 9001:2000/2008, ISO 9001:2000, ISO 22000:2005, ISO 9000, ISO 22000, ISO 14000, ISO 17025, FSSC 22000, BRC, BRC IOP, IFS, SQF 1000, SQF 2000. | 9 |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Recognize the concept of food safety and standards and rules established to enforce the safety and purity of food products          | K2                           |
| CO2            | Summarize different types of food hazards and contaminations and know about food safety aspects of novel methods of food processing | K3                           |
| CO3            | To gain knowledge of the food safety aspects of novel methods of food processing                                                    | K2                           |
| CO4            | Distinguish various food safety regulations, risk assessments and voluntary quality standards and certification                     | K3                           |
| CO5            | Relate different types of food acts and food standardization                                                                        | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 3   |     |     |     |     |     |     |     |      |      |      |
| CO2 | 3   | 2   | 2   |     |     |     |     |     |     |      |      |      |
| CO3 | 2   | 3   |     | 3   |     | 2   | 2   |     |     |      |      |      |
| CO4 | 2   | 3   |     | 3   |     |     |     |     |     |      |      |      |
| CO5 | 2   | 2   | 2   |     |     | 3   | 3   |     |     |      |      |      |

| Text Books |                                               |                                  |                       |                     |

## SEMESTER S5

### FOOD ADDITIVES AND FLAVORINGS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PBFTT504</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 4               | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 3:0:0:1         | <b>Exam Hours</b>  | 2 Hrs. 30 min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To impart knowledge about various categories of food additives their functions, permissible limits to be used in various food products.
2. To gain knowledge on flavour isolation methods and application of flavouring agents in food processing

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Food Additives – definition, types, examples, functions, rules and regulations responsible for use of food additives, GRAS, maximum permissible limits, AD1, Risk Assessment, Toxicity Evaluation of food additive , Application of food additive in food processing and preservation                  | <b>9</b>             |
| <b>2</b>          | Different types of food additives –functions ,mode of action, examples and applications in food industry – Preservatives, Antioxidants, Acidulants, Colouring agents, Emulsifiers, Sweeteners and thickening agent                                                                                     | <b>9</b>             |
| <b>3</b>          | Food flavour – Food flavour industry – scope and significance, flavouring agents, example, natural, natural identical and artificial flavour, methods of flavour isolation, different flavour products, spray drying of flavour, different types of flavour products, application of flavouring agents | <b>9</b>             |
| <b>4</b>          | Flavour creation ,Sensory analysis of flavour, Subjective and objective methods of flavour analysis, Scoville unit<br>Seasoning –development and optimization process, application of seasonings<br>flavour enhancer, flavour quality analysis, flavour organizations certifications                   | <b>9</b>             |

**Suggestion on Project Topics**

1. Market study on the food additive – variety and types of food additive in different processed foods
2. Case study on the food additive – Review of literature on health risk caused by food additive
3. Application of food additive in selected processed food item
4. Isolation of flavour from selected spices/herbs
5. Development of seasoning agent and evaluation of seasoning using subjective and objective methods

**Course Assessment Method**  
**(CIE: 60 marks, ESE: 40 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Project | Internal Ex-1 | Internal Ex-2 | Total |
|------------|---------|---------------|---------------|-------|
| 5          | 30      | 12.5          | 12.5          | 60    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                    | Part B                                                                                                                                                                                              | Total |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 2 marks<br/>(8x2 =16 marks)</li></ul> | 2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 2 sub divisions. Each question carries 6 marks.<br><br>(4x6 = 24 marks) | 40    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand diverse food additives used in the food industries and its technological function | <b>K2</b>                    |
| <b>CO2</b>     | Knowledge on the rules and regulations prevailing for the use of food additives              | <b>K2</b>                    |
| <b>CO3</b>     | Application of different food additives in food processing and preservation                  | <b>K3</b>                    |
| <b>CO4</b>     | Application of flavouring agents and flavour products in food industry                       | <b>K3</b>                    |
| <b>CO5</b>     | Identification of different methods of flavour isolation and development of seasonings       | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   | 2   |     |     |     |     |     |     |      |      | 2    |
| <b>CO2</b> | 3   |     |     |     |     | 2   |     |     |     |      |      | 2    |
| <b>CO3</b> | 3   |     | 2   |     |     | 2   |     |     |     |      |      |      |
| <b>CO4</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO5</b> | 3   |     |     |     |     |     |     |     | 2   |      |      |      |

| Text Books |                                               |                                                                       |                         |                  |
|------------|-----------------------------------------------|-----------------------------------------------------------------------|-------------------------|------------------|

## **Assessment and Evaluation for Project Activity**

| <b>Sl. No</b> | <b>Evaluation for</b>                                               | <b>Allotted Marks</b> |
|---------------|---------------------------------------------------------------------|-----------------------|
| 1             | Project Planning and Proposal                                       | 5                     |
| 2             | Contribution in Progress Presentations and Question Answer Sessions | 4                     |
| 3             | Involvement in the project work and Team Work                       | 3                     |
| 4             | Execution and Implementation                                        | 10                    |
| 5             | Final Presentations                                                 | 5                     |
| 6             | Project Quality, Innovation and Creativity                          | 3                     |
| <b>Total</b>  |                                                                     | <b>30</b>             |

### **1. Project Planning and Proposal (5 Marks)**

- Clarity and feasibility of the project plan
- Research and background understanding
- Defined objectives and methodology

### **2. Contribution in Progress Presentation and Question Answer Sessions (4 Marks)**

- Individual contribution to the presentation
- Effectiveness in answering questions and handling feedback

### **3. Involvement in the Project Work and Team Work (3 Marks)**

- Active participation and individual contribution
- Teamwork and collaboration

### **4. Execution and Implementation (10 Marks)**

- Adherence to the project timeline and milestones
- Application of theoretical knowledge and problem-solving
- Final Result

**5. Final Presentation (5 Marks)**

- Quality and clarity of the overall presentation
- Individual contribution to the presentation
- Effectiveness in answering questions

**6. Project Quality, Innovation, and Creativity (3 Marks)**

- Overall quality and technical excellence of the project
- Innovation and originality in the project

Creativity in solutions and approaches

## SEMESTER S5

### MODELLING & SIMULATION IN FOOD PROCESSING

|                                            |                 |                    |                |

#### Course Objectives:

1. To introduce students to the principles and applications of statistical methods in the food processing industry fundamental principles of food process modelling and simulation.
2. To provide students with a comprehensive understanding of the different types of food process models the role of food process modelling and simulation in the food industry and its potential for improving food quality and safety, reducing costs and waste, and promoting sustainability.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Statistical Analysis in Food Processing: Definition of statistical analysis and its importance in the food processing industry, Understanding the various types of statistical methods used in food processing analysis, Overview of hypothesis testing and its use in food analysis, Steps involved in conducting hypothesis tests and interpreting the results. | <b>9</b>             |
| <b>2</b>          | Fundamentals of Linear Regression, Introduction to regression analysis, Simple linear regression and its assumptions, Estimation of regression coefficients, Hypothesis testing in linear regression, Model evaluation metrics: R-squared, adjusted R-squared, Mean Squared Error (MSE), Introduction to multiple linear regression                                               | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                           |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Introduction to Food Process Modelling: Overview of food process modelling and its applications, Types of models and their use in food processing, Empirical Model Development: Factorial, fractional factorial and rotatable central composite experimental design, developing empirical equations using experimental data.              | <b>9</b> |
| <b>4</b> | Mass transfer models: such as liquid-liquid extraction, distillation, multicomponent separation, evaporator. The main steps in model building of separation equipment. Major types of available heat exchange equipment. Shell-and-tube heat exchangers, Required Heat Duty. The main steps in model building of heat-exchange equipment. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                  | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the statistical techniques and their applications in food processing, including ANOVA, and hypothesis testing                                                         | <b>K2</b>                    |
| <b>CO2</b>     | Understand the fundamental principles of food process modelling.                                                                                                                 | <b>K2</b>                    |
| <b>CO3</b>     | Know the different types of food process models, including empirical models, analytical models, and numerical models                                                             | <b>K3</b>                    |
| <b>CO4</b>     | Develop and validate food process models using experimental data and statistical techniques, such as regression analysis and optimization methods.                               | <b>K4</b>                    |
| <b>CO5</b>     | Know the different types of simulation software and their applications in the food industry, including computational fluid dynamics (CFD) software, such as ANSYS Fluent, MATLAB | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S5

### NANOTECHNOLOGY IN FOOD

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT522</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | PE             |

#### Course Objectives:

1. Develop students' knowledge in nanoparticles, covering their synthesis, characterization, and unique properties.
2. Explore the potential applications of nanotechnology in the food industry by leveraging the distinctive features of nanomaterials.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|

Quantum dots, nanocomposites, nanofibers, nanowires, nanotubes, nanoforms of carbon.<br><b>Environmental toxicology of engineered nanoparticles.</b> Monitoring nanoparticles - Risk governance, General regulations on safety aspects, Regulation aspects of nano scale food ingredients. | <b>9</b>             |
| <b>2</b>          | <b>Synthesis and characterization of nanomaterials:</b><br>Bottom up Synthesis and Top down Approach – Physical, chemical and Biological methods of nanoparticles synthesis. Characterization of nanomaterials – UV Visible Spectroscopy, X-ray diffraction technique, Scanning Electron Microscopy, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques -AFM, SPM, STM, SNOM, ESCA, SIMS.                 | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | <b>Nano-engineered food ingredients and additives:</b><br>Nano materials for food applications - functionalized nanomaterials, nano additives. Food processing and food safety and bio-security - Nanotechnology for improving food quality, detection of contaminants, Electrochemical sensors for food analysis                                                                                                                                                                                                                                       | <b>9</b> |
| <b>4</b> | <b>Nanotechnology in food packaging and food preservation:</b><br>Nanomaterials for bacterial, fungal and viral inhibition – properties, mode of action. Nanopackaging for enhanced shelf life -nano composites, nano coatings, nanomembranes. Role in active packaging - Smart/ Intelligent packaging.<br><b>Potential hazards and regulations:</b><br>Potential hazards - health risks, toxicity of nanoparticles, effects of inhaled particles -respiratory systems, skin exposure to nanoparticles, hazards and risks of exposure to nanoparticles. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total     |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-----------|
| <b>5</b>   | <b>15</b>                   | <b>10</b>                              | <b>10</b>                                | <b>40</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                            | Part B                                                                                                                                                                                                                                                                           | Total     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

At the end of the course students should be able to:

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

[illegible]

## SEMESTER S5

### FOOD RHEOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT523</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the rheological properties of food and their significance in food processing.
2. To apply the knowledge of viscoelastic properties in handling equipments and processing of foods.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                 | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Basic concepts of Food Rheology:</b> Introduction and scope, food rheological properties, Various types of stress, strain, modulus and viscosity, Poisson ratio evaluation, Physical state of a food material, various flows, Classical ideal materials, Time effects (viscoelasticity), Rheological equations, Rheological models                                                                       | <b>9</b>             |
| <b>2</b>          | <b>Rheological Properties of food:</b> Types of Deformation; Newtonian and Non-Newtonian fluids, Creep, Stress relaxation, Viscometry, Dynamic tests, Various behaviour: Force deformation behaviour, Stress strain behaviour (Basic & Bulk), Elastic plastic behaviour, Viscoelastic behaviour, Flow behaviour of Pseudoplastic, Thixotropic, Dilatant, Rheopectic and Plastic; Phase transition in foods. | <b>9</b>             |
| <b>3</b>          | <b>Measurement of Rheological properties:</b> Different viscosity measurement and viscometers: Rotational viscometers, Vibrational (Oscillation) viscometer, Bostwick consistometer, Pressure-Driven                                                                                                                                                                                                        | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                          |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Flow Viscometers, Capillary tubes and Falling sphere type, Torsion Gelometer for Solid Foods, Texture of Foods: Dough testing instruments.                                                                                                                                                                                                                                                                               |          |
| <b>4</b> | <b>Application of Rheology in fluid food handling and processing:</b><br>Textural properties of fruits & vegetables; Dough, Pasta and Baked products; dairy products; Meat; Fat and fat products; and their instrumental Measurements. Rheology of chocolate, Textural characteristics of food emulsions, Functions of emulsifiers in relation to food texture, Sensory measurement of food texture and texture profile. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the rheological properties of food and their significance in food processing                  | <b>KL2</b>                   |
| <b>CO2</b>     | Apply the knowledge of viscoelastic properties in handling and processing of foods                       | <b>KL3</b>                   |
| <b>CO3</b>     | Differentiate different types of viscometers, understand their working and applications in food industry | <b>KL2 ,KL4</b>              |
| <b>CO4</b>     | Analyse the rheological properties and texture in food handling and processing                           | <b>KL4</b>                   |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> |     | 2   | 1   |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   | 2   | 2   | 1   |     | 2   |     |     |     |      |      |      |
| <b>CO3</b> | 2   |     |     |     | 3   | 2   |     |     |     |      |      |      |
| <b>CO4</b> | 1   | 2   | 2   | 1   | 3   | 2   |     |     |     |      |      |      |

## SEMESTER S5

### SENSORY EVALUATION OF FOOD PRODUCTS

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>PEFTT524</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To familiarize the different methods used in the sensory evaluation of the food product
2. To understand the procedure and selection aspects of evaluation panel and the method to be used for the evaluation.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction</b><br>Definitions of sensory evaluation, importance of sensory evaluation. Factors affecting food acceptance- sensory, psychological and physiological aspects.<br>Sensory assessment of food quality<br>Appearance- Visual perception, colour of foods, Flavour, Taste, Aroma & odour- Perception of odour, sniffing, texture.                                                                                                                                                                                                                                                                     | <b>9</b>             |
| <b>2</b>          | <b>Selection of panel-</b> Types of panel, methodology for sensory evaluation.<br><b>Considerations for testing sensory evaluation-</b> Testing area & setup, lighting, testing schedule, preparation of samples, cooling & order of presentation, choosing of panels.<br>Sensory tests for food- Types of test- Analytical - Discriminative (difference test, sensitivity test)<br>Descriptive test – (Category scaling, radio scaling, Flavour Profile analysis, texture profile analysis, quantitative descriptive analysis)<br>Affective test – Paired performance, Ranking, Rating- hedonic & food action scale | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                    |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | <b>Texture &amp; optical properties:</b><br>Subjective measurements – physiological aspects, psychological aspects, mechanical aspects. Imitative measurements- equipments used, texture profile analysis, dynamic test for evaluation of food texture, colour, measuring equipment, L*a*b system.                                                                                                 | <b>9</b> |
| <b>4</b> | <b>Introduction to Statistical Analysis in Food Processing:</b> Definition of statistical analysis and its importance in the food processing industry, Understanding the various types of statistical methods used in food processing analysis. Data analysis- concept of mean, median & standard deviation, certification of laboratories for sensory analysis, application of sensory evaluation | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

At the end of the course students should be able to:

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

[illegible]

## SEMESTER S5

### ENGINEERING PROPERTIES OF FOOD MATERIALS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT526</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquire knowledge about properties of food materials that are important in processing
2. To study the measurement methods of engineering properties and analysis of food materials

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to engineering properties of biological materials, classification of food properties, food quality and safety<br><b>Physical properties:</b> Shape and size – criteria for describing shape and size<br>Volume and methods of measurement of volume, Density, Types, Method of measurement of apparent density, material density, particle density, bulk density, true density Porosity, types, methods of measurement of porosity<br>Surface area measurement for fruits and vegetables, egg surface area, pore surface area. | <b>9</b>             |
| <b>2</b>          | <b>Frictional properties:</b> Laws of friction, effect of load and properties of contacting bodies. Effect of sliding velocity and contact surface temperature, effect of water film and surface roughness. Rolling resistance, angle of repose, angle of internal friction, pressure distribution in storage structures and compression chambers                                                                                                                                                                                           | <b>9</b>             |
| <b>3</b>          | <b>Thermal properties:</b> Thermal conductivity, measurement of thermal conductivity, Specific heat, measurement of specific heat, enthalpy, thermal diffusivity, boiling point, freezing point, dielectric properties                                                                                                                                                                                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | <b>Aerodynamic properties:</b> drag coefficient, terminal velocity, measurement of terminal velocity; application the properties in the harvesting, post harvest handling, processing, storage and how it affects consumer's perception of food quality and safety.                                                                                                                                                                                                                 |          |
| <b>4</b> | <b>Texture &amp; optical properties:</b><br>Subjective measurements – physiological aspects, psychological aspects, mechanical aspects. Imitative measurements- equipments used, texture profile analysis, dynamic test for evaluation of food texture, mechanical test applicable to food materials – firmness and hardness, mechanics of hardness, dynamic hardness, effect of age, water content and temperature on texture of foods; colour, measuring equipment, L*a*b system. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                           | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Understand the significance and evaluation of physical properties of food materials                       | K2                           |
| CO2            | Acquire knowledge of frictional properties of food materials                                              | K2                           |
| CO3            | Recognize thermal, aerodynamic properties food and their measurement techniques.                          | K2                           |
| CO4            | Understand methods for the measurement of texture and colour of food material                             | K2                           |
| CO5            | Apply the knowledge of various properties to improve the qualitative and quantitative attributes of food. | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Differentiate conventional and novel separation techniques
2. Apply novel separation techniques in various fields of Food Technology

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to separation techniques: Separation factor and its dependence on process variable. Equilibrium and rate governed process. Classification of separation process: conventional methods like sedimentation, centrifugal separation, distillation, absorption, adsorption etc. Limitations of conventional methods. Theory of cascades and its application in single and multistage operation for binary and multi component separations, thermodynamic analysis of separation systems. | <b>9</b>             |
| <b>2</b>          | Membrane Separation: Membrane configurations – Plate and Frame, Tubular, Spiral wound and Hollow fibre systems. Types of membranes, Materials for membrane, design considerations, performance of membrane, electro dialysis, reverse osmosis, Nanofiltration, ultrafiltration, Microfiltration and Donnan dialysis, External field induced membrane separation processes, Applications in food processing.                                                                                       | <b>9</b>             |
| <b>3</b>          | Chromatographic Separations: Theory of chromatographic separation, Selectivity or separation factor, Efficiency of chromatographic system. Principle, method and applications of different chromatographic techniques in Food Processing: Liquid chromatography, Liquid-solid chromatography, Affinity chromatography, Immunochromatography, Ion exchange                                                                                                                                         | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | chromatography<br>Advantages and disadvantages of chromatographic separations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |
| <b>4</b> | <p>Adsorption and Ionic Separations: Types and choice of adsorbants, Adsorptive Membranes, adsorption techniques, batch adsorption, stage-type and continuous adsorption; fixed-bed adsorption, adsorption isotherms. Ion exchange resins, properties, Binary ion exchange, Ion movement theory, Controlling factors, electrophoresis, Di-electrophoresis, Zonal electrophoresis, Applications of Ion Exchange separation in the Food Industry.</p> <p>Other major techniques: Freeze crystallization, Prevaporation and permeation techniques for solids, liquids and gases. Osmotic distillation, Zone melting: Equilibrium diagrams, Controlling factors ,Apparatus and applications, Foam Separation: Surface adsorption, Nature of foams, Apparatus, Applications in food processing, and Controlling factors.</p> | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                               | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Differentiate conventional and novel separation techniques                    | <b>K2</b>                    |
| <b>CO2</b>     | Analyze and design novel membranes for food industry application              | <b>K2</b>                    |
| <b>CO3</b>     | Paraphrase different chromatographic separation techniques                    | <b>K2</b>                    |
| <b>CO4</b>     | Analyze adsorption and ion exchange based separation processes                | <b>K3</b>                    |
| <b>CO5</b>     | Describe pervaporation, freeze crystallisation and other separation processes | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> |     |     | 3   |     |     |     |     |     |     |      |      |      |
| <b>CO3</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> |     | 3   |     |     |     |     |     |     |     |      |      |      |
| <b>CO5</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |

| Text Books |                                          |                                            |                                            |                  |

## SEMESTER S5

### FOOD FERMENTATION TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT528</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Impart knowledge and skills related to process technologies in fermented food products.
2. Learn about the fermentation metabolism involved in the production of various fermented food products.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to food fermentation</b> -Definition and significance of food fermentation, historical background and cultural aspects of fermented foods. Importance of fermentation in food preservation. Microbiology of fermented foods- types of microorganisms in food fermentation (yeast, bacteria, molds), role of microorganisms, starter cultures and their selection.                                                                                                                               | <b>9</b>             |
| <b>2</b>          | <b>Fermentation metabolism, equipment and technology</b> -fermentation pathways and metabolic processes- glycolysis, TCA cycle, anaerobic respiration. Production of metabolites- ethanol, lactic acid, acetic acid. Factors affecting microbial growth and fermentation. Types of fermentation systems- batch, fed-batch, continuous. Design and operation of bioreactors.                                                                                                                                     | <b>9</b>             |
| <b>3</b>          | <b>Fermented food products and its manufacturing</b> - fermented dairy products- yogurt, cheese, kefir- microorganisms and process involved. Fermented fruits and vegetable products- sauerkraut, kimchi, pickles- lactic acid bacteria and fermentation processes. Fermented cereal and legume product- bread, rice-based and soy-based products- biochemical changes during fermentation. Fermented meat and fish products- sausages, salami, fish sauce, fish paste. Storage and shelf-life of the products. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <p><b>Health benefits of fermented foods-</b> Probiotics and their health benefits, fermented foods in nutrition and health.</p> <p><b>Quality control and safety in fermented foods-</b> Quality control parameters and testing methods, regulatory aspects of fermented foods, Safety aspects- pathogenic microorganisms, toxins and allergens.</p> <p>Future prospects of food fermentation and advances in fermentation technology.</p> | <b>9</b> |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of microbial fermentation.                                       | <b>K2</b>                    |
| <b>CO2</b>     | Understand the different fermentation metabolism process and equipments                      | <b>K3</b>                    |
| <b>CO3</b>     | Gain knowledge on manufacturing of different fermented food products.                        | <b>K4</b>                    |
| <b>CO4</b>     | Critically assess quality control,safety measures and nutritional values of fermented foods. | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     | 2   | 1   |     |     |      |      |      |
| <b>CO2</b> | 3   |     | 2   |     | 1   |     |     |     |     |      |      |      |
| <b>CO3</b> | 2   |     | 2   |     |     |     | 2   |     |     |      |      |      |
| <b>CO4</b> | 1   |     |     |     |     | 2   |     | 2   |     |      |      |      |

| Text Books |                                                        |                      |                       |                               |
|------------|--------------------------------------------------------|----------------------|-----------------------|-------------------------------|
| Sl. No     | Title of the Book                                      | Name of the Author/s | Name of the Publisher | Edition and Year              |
| 1          | “Microbiology and Technology of Fermented Foods”       | Robert W. Hutkins.   | Blackwell             | 2 <sup>nd</sup> Edition, 2016 |

## SEMESTER 5

### NOVEL FOOD PROCESSING TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT525</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 5/3             | <b>Exam Hours</b>  | 2 Hrs. 30 min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Students will be learning the latest technologies in food processing and its applications

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction and HPP Introduction to Food Process Engineering</b><br>Scope and importance. High Pressure processing – principle, equipment and process of HPP treatment, Application of HPP in food processing.                                                                                                                             | <b>9</b>             |
| <b>2</b>          | <b>Membrane Technologies and PEF</b><br>Membrane technologies in food processing – Overview of Membrane technology. Microfiltration, Ultra filtration (UF), Nano filtration(NF) and Reverse Osmosis (RO) and their industrial applications.<br>Pulsed electric field processing - Principle, process and application in food processing sector | <b>9</b>             |
| <b>3</b>          | <b>Ultrasonic processing</b><br>Properties and application of ultrasonic processing techniques.<br>Microwave and radio frequency processing.<br>Ohmic heating, IR heating, dielectric heating and Food irradiation, Effects on foods Applications of irradiation.                                                                              | <b>9</b>             |
| <b>4</b>          | <b>Hurdle technology and Nanotechnology</b><br>Hurdle technology - Concept of hurdle technology and its application.<br>Nanotechnology, its principles and applications in foods                                                                                                                                                               | <b>9</b>             |

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <i>Attendance</i> | <i>Internal Ex</i> | <i>Evaluate</i> | <i>Analyse</i> | <i>Total</i> |
|-------------------|--------------------|-----------------|----------------|--------------|
| <b>5</b>          | <b>15</b>          | <b>10</b>       | <b>10</b>      | <b>40</b>    |

**Criteria for Evaluation(Evaluate and Analyse): 20 marks**

**1. Problem Definition (2 points)**

- Check for clarity and completeness of the problem definition.
- Check for clear objectives and divide into sub objectives

**2. Problem Analysis (4 points)**

- Examine the problem and identify the variables and responses
- Divide the problem to manageable parts

**3. Implementation of software (2 points)**

- Use suitable software for getting the solution
- Check for the appropriateness of tools used

**4. Evaluate (4 points)**

- Evaluate the proposed solution.
- Assess the correctness of solution.

**5. Validation of the results (4 points)**

- Validate the results using available data.
- Do the error analysis of the results obtained.

**6. Conclusion and presentation (4 points)**

- Summarize the results obtained
- Do critical thinking of the results obtained and evaluate.
- Submit a technical report

**End Semester Examination Marks (ESE):**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                     | Part B                                                                                                                                                                                                 | Total     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <b>(8x3 =24marks)</b> | 2 questions will be given from each module, out of which 1 question should be answered. Each question can have a maximum of 3 sub divisions. Each question carries 9 marks.<br><b>(4x9 = 36 marks)</b> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                   | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Carry out the high-pressure processing in food industry                                           | <b>K2</b>                    |
| <b>CO2</b>     | Explain in detail about all membrane technology so that it can be applied in processing industry. | <b>K2</b>                    |
| <b>CO3</b>     | Process the food items through novel heating methods.                                             | <b>K3</b>                    |
| <b>CO4</b>     | Apply nanotechnology to food processing to produce novel foods.                                   | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

**SEMESTER 5**  
**FOOD PRESERVATION LAB**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL507</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0-0:3-0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Lab            |

**Course Objectives:**

- 1.To understand basic preservation methods in food manufacturing
2. To evaluate quality parameters of processed food products

**Details of Experiment**

| <b>Expt. No</b> | <b>Experiment</b>                                                            |
|-----------------|------------------------------------------------------------------------------|
| <b>1</b>        | Specifications suggested by fssai-specification of fruit beverages           |
| <b>2</b>        | Preservation of pine apple squash                                            |
| <b>3</b>        | Preservation by drying                                                       |
| <b>4</b>        | Preparation of pine apple syrup                                              |
| <b>5</b>        | Preparation of RTS and analysis of yield, TSS and acidity                    |
| <b>6</b>        | Preparation of mango bar and shelf life study                                |
| <b>7</b>        | Preparation of nutmeg pickle                                                 |
| <b>8</b>        | Preparation of sauce                                                         |
| <b>9</b>        | Preparation of grape wine                                                    |
| <b>10</b>       | Sulphating of vegetables                                                     |
| <b>11</b>       | Preparation of synthetic syrup                                               |
| <b>12</b>       | Manufacture of pan bread                                                     |
| <b>13</b>       | Preservation meat by curing and analysis of color and water holding capacity |

|           |                                                  |
|-----------|--------------------------------------------------|
| <b>14</b> | Candling of egg and estimation of egg quality    |
| <b>15</b> | Blanching of vegetable and checking the adequacy |

#### **Course Assessment Method**

**(CIE: 50 Marks, ESE 50 Marks)**

#### **Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Preparation/Pre-Lab Work, experiments, Viva and Timely completion of Lab Reports / Record. (Continuous Assessment)</b> | <b>Internal Exam</b> | <b>Total</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------|----------------------|--------------|
| <b>5</b>          | <b>25</b>                                                                                                                 | <b>20</b>            | <b>50</b>    |

#### **End Semester Examination Marks (ESE):**

| <b>Procedure/<br/>Preparatory<br/>work/Design/<br/>Algorithm</b> | <b>Conduct of experiment/<br/>Execution of work/<br/>troubleshooting/<br/>Programming</b> | <b>Result with<br/>valid<br/>inference/<br/>Quality of<br/>Output</b> | <b>Viva<br/>voce</b> | <b>Record</b> | <b>Total</b> |
|------------------------------------------------------------------|-------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|----------------------|---------------|--------------|
| <b>10</b>                                                        | <b>15</b>                                                                                 | <b>10</b>                                                             | <b>10</b>            | <b>5</b>      | <b>50</b>    |

#### **Mandatory requirements for ESE:**

- Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.
- Endorsement by External Examiner: The external examiner shall endorse the record.

#### **Course Outcomes (COs)**

**At the end of the course the student will be able to:**

| <b>Course Outcome</b> |                                                                                                    | <b>Bloom's Knowledge Level (KL)</b> |
|-----------------------|----------------------------------------------------------------------------------------------------|-------------------------------------|
| <b>CO1</b>            | Demonstrate the understanding about various methods for food preservation of fruits and vegetables | <b>K1</b>                           |
| <b>CO2</b>            | Evaluate the raw material-product ratio . Analyse various FSSAI specification of food products     | <b>K5</b>                           |
| <b>CO3</b>            | Analyse various FSSAI specification of food products                                               | <b>K4</b>                           |
| <b>CO4</b>            | Identification of traditional products                                                             | <b>K1</b>                           |
| <b>CO5</b>            | Understand water holding capacity of animal products                                               | <b>K2</b>                           |

***K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create***

### **Continuous Assessment (25 Marks)**

#### **1. Preparation and Pre-Lab Work (7 Marks)**

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

#### **2. Conduct of Experiments (7 Marks)**

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

#### **3. Lab Reports and Record Keeping (6 Marks)**

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

#### **4. Viva Voce (5 Marks)**

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

*Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.*

## **Evaluation Pattern for End Semester Examination (50 Marks)**

### **1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)**

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.
- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.
- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

### **2. Conduct of Experiment/Execution of Work/Programming (15 Marks)**

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

### **3. Result with Valid Inference/Quality of Output (10 Marks)**

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

### **4. Viva Voce (10 Marks)**

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

### **5. Record (5 Marks)**

- Completeness, clarity, and accuracy of the lab record submitted

**SEMESTER 5**  
**FOOD PROCESSING LAB**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL508</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0-0-3-0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Lab            |

**Course Objectives:**

1. To study processing methods of different types of food
2. To learn the effect of different processing methods on the nutritional quality preservation of the foods

**Details of Experiment**

| <b>Expt. No</b> | <b>Experiment</b>                                           |
|-----------------|-------------------------------------------------------------|
| <b>1</b>        | Study on Freeze Drying                                      |
| <b>2</b>        | Study on Spray Drying                                       |
| <b>3</b>        | Blanching of Vegetables with and without acid pre-treatment |
| <b>4</b>        | Dehydration study of vegetables                             |
| <b>5</b>        | Stages of sugar cooking/ cookery                            |
| <b>6</b>        | Preparation of fruit candy/Toffee                           |
| <b>7</b>        | Preparation of Chocolate                                    |
| <b>8</b>        | Osmotic Dehydration of Amla/Gooseberry                      |
| <b>9</b>        | Preparation of Jam, Jelly                                   |
| <b>10</b>       | Preparation of Paneer                                       |
| <b>11</b>       | Preparation of tomato puree/ ketchup                        |
| <b>12</b>       | Preparation of sauerkraut                                   |
| <b>13</b>       | Preparation of squash                                       |
| <b>14</b>       | Preparation of Dahi/Yoghurt                                 |

|           |                                                              |
|-----------|--------------------------------------------------------------|
| <b>15</b> | Sensory Evaluation of food products by 9 point hedonic Scale |
|-----------|--------------------------------------------------------------|

**Course Assessment Method (CIE: 50 Marks, ESE 50 Marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Preparation/Pre-Lab Work, experiments, Viva and Timely completion of Lab Reports / Record.<br/>(Continuous Assessment)</b> | <b>Internal Exam</b> | <b>Total</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------|
| <b>5</b>          | <b>25</b>                                                                                                                     | <b>20</b>            | <b>50</b>    |

**End Semester Examination Marks (ESE):**

| <b>Procedure/<br/>Preparatory<br/>work/Design/<br/>Algorithm</b> | <b>Conduct of experiment/<br/>Execution of work/<br/>troubleshooting/ Programming</b> | <b>Result with<br/>valid inference/<br/>Quality of<br/>Output</b> | <b>Viva<br/>voce</b> | <b>Record</b> | <b>Total</b> |
|------------------------------------------------------------------|---------------------------------------------------------------------------------------|-------------------------------------------------------------------|----------------------|---------------|--------------|
| <b>10</b>                                                        | <b>15</b>                                                                             | <b>10</b>                                                         | <b>10</b>            | <b>5</b>      | <b>50</b>    |

**Mandatory requirements for ESE:**

- Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.
- Endorsement by External Examiner: The external examiner shall endorse the record.

**Course Outcomes (COs)**

**At the end of the course the student will be able to:**

| <b>Course Outcome</b> |                                                                                | <b>Bloom's<br/>Knowledge<br/>Level (KL)</b> |
|-----------------------|--------------------------------------------------------------------------------|---------------------------------------------|
| CO1                   | Apply the principles and methods involved in the processing of different foods | K1                                          |
| CO2                   | Analyse various preservation techniques of foods                               | K5                                          |
| CO3                   | Develop skills to analyze food quality                                         | K4                                          |
| CO4                   | Formulate various nutritive products and work in team                          | K1                                          |
| CO5                   | Evaluate different food products                                               | K2                                          |

K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S6

### DESIGN OF FOOD PROCESSING EQUIPMENT & PLANT LAYOUT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT601</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquire basic understanding of design parameters and knowledge of design procedures for commonly used food processing equipment.
2. To acquaint and equip the students with different unit operations of food industries and their design features

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction and Design of vessels:</b> Nature of equipment, general design procedure, equipment classification. Properties of materials -Types of stresses and strains - Poisson's ratio- Hooke's Law – stress strain diagram- factor of safety, Materials of construction, Corrosion<br><br>Pressure vessel- design of cylindrical and spherical shell subject to internal and external pressure, Silo design- Rankine Theory-Airy equation- Janssen equation | <b>9</b>             |
| <b>2</b>          | <b>Design of heat exchangers, evaporators and dryers:</b> Design of heat exchangers –Double pipe heat exchangers, plate heat exchanger, shell and tube heat exchangers, design of evaporators-mass and energy balance-single effect and multiple effect evaporators, Design of dryers-mass and energy balance, Psychrometrics-drying time calculation.                                                                                                             | <b>9</b>             |
| <b>3</b>          | <b>Design of supplemental processes:</b> Design of food extruders – power requirements, Design of cold storage – factors to be considered –estimation                                                                                                                                                                                                                                                                                                              | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                            |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | of cooling load – construction and operation. Design of Agitation Vessels- power requirements, Design of centrifugal separator- rate of separation, Design considerations of cleaners, Design considerations of Belt conveyor, bucket elevator, screw conveyor, chain conveyor, pneumatic conveyor.                        |          |
| <b>4</b> | <b>Plant layout and Design:</b> Basic concepts of plant layout and design with special reference to food process industries, Plant location- factors- location theory and models, plant layout-characteristics- types, SLP and its application in development of plant layout, Development of food plant layout and design | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total     |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-----------|
| <b>5</b>   | <b>15</b>                   | <b>10</b>                              | <b>10</b>                               | <b>40</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                            | Part B                                                                                                                                                                                                                                                                                                             | Total     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                       | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Describe the basics concepts related to design of equipment.                                          | <b>K2</b>                    |
| <b>CO2</b>     | Determine the design parameters of heat exchangers, evaporators and dryers                            | <b>K3</b>                    |
| <b>CO3</b>     | Estimate the design parameters of extruders, cold storage, agitation vessel and centrifugal separator | <b>K3</b>                    |
| <b>CO4</b>     | Explain the basic concepts in development plant layout                                                | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 3   | 2   |     |     |     |     |     |     |      | 3    |      |
| <b>CO2</b> | 3   | 3   | 3   |     |     |     | 2   |     |     | 1    | 3    | 2    |
| <b>CO3</b> | 3   | 3   | 3   |     |     |     | 1   |     |     | 1    | 3    | 1    |
| <b>CO4</b> | 3   | 3   | 1   |     |     |     | 2   |     |     | 1    | 3    | 2    |
| <b>CO5</b> |     |     |     |     |     | 3   |     | 3   |     |      |      |      |

| Text Books |                                           |                                           |                                         |                       |

## SEMESTER S6

### MEAT, FISH AND POULTRY PROCESSING

|                                            |                 |                        |                |
|--------------------------------------------|-----------------|------------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTT602</b> | <b>CIE Marks</b>       | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>       | 60             |
| <b>Credits</b>                             | 3               | <b>Exam<br/>Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course<br/>Type</b> | Theory         |

#### Course Objectives:

1. Provide an understanding of various chemical and instrumental methods for analyzing food.
2. Equip graduate students with detailed knowledge of modern techniques used in research, development, and inspection of food products in industry, analytical laboratories, and government agencies.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction</b><br>Current level of production, consumption and export of meat products. Meat composition from different sources; muscle structure and compositions; Effect of feed, breed and management on production and quality, post-mortem muscle chemistry; meat colour and flavours; meat microbiology and safety                                                                                                                                                                                              | <b>9</b>             |
| <b>2</b>          | <b>Types of Meat</b><br>Beef, mutton, pork as human foods. Modern abattoirs, typical layout and features, Ante- mortem handling and design of handling facilities; stunning methods; steps in slaughtering and dressing; and inspection; inedible by-products; effects of processing on meat tenderization; abattoir equipment and utilities.<br><b>Processing technologies</b><br>Chilling and freezing of carcass and meat; canning, pickling, curing and smoking; prepared meat products like salami, kebabs, sausages; |                      |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | intermediate moisture and dried meat products; radiation processing, canning of meat                                                                                                                                                                                                                                                                                                                                                                               |          |
| <b>3</b> | <b>Handling and Transportation</b><br>Care in Handling and transportation of fish at sea; Handling and transportation on land; Ship board refrigeration equipment's; Cold chain. design of refrigerated and insulated trucks;<br><b>Cured and smoked fish</b><br>Salt curing of fish; Storage of salted fish; Quality of finished products; Production of cold smoke fish; Hot smoked fish and light salted and light smoked fish; smoked fish using curing liquid | <b>9</b> |
| <b>4</b> | <b>Poultry processing</b><br>Introduction, Reception of birds, antemortem examination of poultry, steps involved in poultry processing, post mortem examination, chilling, grading, cutting, packaging. Meat yield                                                                                                                                                                                                                                                 | <b>9</b> |

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Categorize various equipment involved in production, processing and acceptance of meat and poultry. | <b>K2</b>                    |
| <b>CO2</b>     | Investigate the processed products and by-product utilization of meat and poultry.                  | <b>K2</b>                    |
| <b>CO3</b>     | Evaluate about the care in handling and transportation of fish at sea and on land                   | <b>K3</b>                    |
| <b>CO4</b>     | Distinguish the quality of cured and smoked fish in preservation                                    | <b>K3</b>                    |
| <b>CO5</b>     | Understand the various processes involved in poultry processing.                                    | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S6

### NON-THERMAL PROCESSING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT631</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To analyze the principles and methods of non-thermal processing technologies and their application in food processing industries.
2. A thorough understanding of the specific novel processing technologies for different food items

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Emerging technologies in food processing – necessity and advantages of non-thermal technologies. High Pressure Processing – Principle, equipment and process of HPP treatment, mechanism of microbial inactivation, application of HPP in food processing. Concept of hurdle technology.                                | <b>9</b>             |
| <b>2</b>          | Pulsed Electric field processing - Principle, process, equipment, principle of microbial inactivation, application in food processing. Ultrasonic processing – principle of operation, effect on microorganisms, applications. Ozone processing and cold plasma.                                                        | <b>9</b>             |
| <b>3</b>          | Radiation processing of foods – food irradiation, microwave processing, Infrared heating, radiofrequency heating – principle, working and microbial inactivation. Pulsed light technology and Oscillating magnetic field in preservation – principle and working.                                                       | <b>9</b>             |
| <b>4</b>          | Food extrusion technology – theory, equipment and its functioning, Types of extruders, Effect of extrusion on foods. Membrane technologies in food processing – Overview of Membrane technology. Microfiltration, Ultrafiltration (UF), Nanofiltration (NF) and Reverse Osmosis (RO) and their industrial applications. | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                            | Part B                                                                                                                                                                                                                                                                           | Total     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                             | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|---------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Explain different emerging technologies in food industry                                    | <b>K1</b>                          |
| <b>CO2</b>     | Discuss the fundamentals of HPP processing and its applications                             | <b>K2</b>                          |
| <b>CO3</b>     | Describe the concepts behind PEF, ultrasound, ozone and cold plasma technologies            | <b>K3</b>                          |
| <b>CO4</b>     | Explore food preservation techniques using magnetic fields and radiation of different forms | <b>K3</b>                          |
| <b>CO5</b>     | Familiarise with the concepts of extrusion and membrane technology                          | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S6

### BEVERAGE PROCESSING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT632</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To develop the knowledge of students on various concepts, procedures and manufacturing of different beverages.
2. To understand the quality control and quality assurance systems in beverage processing industry

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                           | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Basic Ingredients in Beverages:</b> Beverage definition-ingredients-water, CO <sub>2</sub> , Bulk and Intense Sweeteners, Water Miscible and Water dispersible flavouring agents, Colours-natural and artificial, micro and nano emulsions of flavours and colours in beverages, Preservatives, Emulsifiers and Stabilizers, FSSAI standards for beverages, quality control analysis for beverages | <b>9</b>             |
| <b>2</b>          | <b>Beer and Wine Manufacture:</b> Ingredients-Malt, Hops-adjuncts-water, yeast. Beer manufacturing process-malting, preparation of sweet wort, brewing, fermentation, pasteurization and packaging. Beer defects and spoilage. Wine fermentation-types-red and white. Wine defects and spoilage                                                                                                       | <b>9</b>             |
| <b>3</b>          | <b>Manufacture of Distilled Fermented Beverages:</b> Malt and Grain, Whisky-types, raw materials and processing. Design-wash still operation-spirit still operation-continuous distillation-design and operation of grain whisky stills-maturation and blending- co products. Whiskies of the world and their regulations                                                                             | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Carbonated and Non-carbonated Beverages:</b> Procedures - Carbonation equipment - ingredients, preparation of syrups - filling systems - packaging - containers and closures. Coffee bean preparation-processing-brewing-decaffeination-Instant Coffee-Tea-types-Black, Green and oolong. Dairy based beverages. Fruit juices, Nectar, Squash, RTS beverages and Isotonic Beverages. Flash Pasteurization, Canning and Aseptic packaging of beverages | <b>9</b> |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                         | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | To study the basic ingredients of beverages and classification                                          | <b>K3</b>                    |
| <b>CO2</b>     | To study the process techniques and equipment used for the beer and wine manufacture                    | <b>K3</b>                    |
| <b>CO3</b>     | To study the process techniques and equipment used for the manufacture of distilled fermented beverages | <b>K3</b>                    |
| <b>CO4</b>     | To study the process techniques and equipment used for carbonated beverages                             | <b>K3</b>                    |
| <b>CO5</b>     | To study the quality parameters of beverages                                                            | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

## SEMESTER S6

### FOOD STORAGE ENGINEERING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT633</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students with a fundamental understanding of traditional and modern storage structures
2. To acquire knowledge on the importance of safe and scientific storage structures and different factors affecting storage.
3. To design storage structures and cold stores based on the available product information.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to Food and grain storage</b> - Scope, importance, basic requirements, safe and scientific storage, pre and post-storage operations; post-harvest physiology of semi-perishables and perishables, climacteric and non-climacteric fruits, respiration, ripening, changes during ripening. Direct damages, indirect damages, causes of spoilage in storage (moisture, temperature, humidity, respiration loss, heat of respiration, sprouting), destructive agents (rodents, birds, insects, etc.), sources of infestation and control. | <b>9</b>             |
| <b>2</b>          | <b>Traditional and small-scale storage methods</b> -Traditional storage structures, bag and bulk storage - mud bin, drums, gunny bags etc - method of stacking. Small-scale storage structures, brick, concrete types. Local storage structures, Morai, Bukhari, Kothar, Kuthla, improved storage structures Pusa Bin, Brick and Cement Bin, Bunker storage structure, Cover and plinth storage structure, Factors affecting storage, Temperature and Moisture migration in storage structures.                                                        | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | <b>Modern and large-scale storage</b> - Characteristics of Bulk materials, Bulk storage, Silos; types- deep, shallow. Physical factors influencing flow characteristics, mechanics of bulk solids, flow through hoppers, openings, and ducts - Bulk density, True density, Apparent density, Angle of repose, Angle of rupture, Plane of rupture, Angle of repose, Internal and external friction, Pressure distribution in silos, Rankine's earth pressure coefficient, Airys, Janssens equations, numerical. Warehouses - Selection of site for storage types, specific volume of bagged grains and importance, Percentage utilization of warehouse-numerical. Economic aspects of storage. | <b>9</b> |
| <b>4</b> | <b>Storage of perishables</b> -Cold storage – construction and operation, design of cold storage; controlled and modified atmospheric storage, membrane storage, hypobaric storage, evaporative cooling storage, control of temperature and relative humidity inside storage. Storage conditions for raw and processed fruits, vegetables, meat, dairy etc. Factors affecting storage life. Material handling equipment - belt, chain, screw, roller, pneumatic conveyors and bucket elevators                                                                                                                                                                                                | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                       | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                               | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Explain the requirements of safe and scientific storage of grains and the operations involved | K2                           |
| CO2            | Study the types and the methods for traditional and small-scale safe storage of food grains   | K2                           |
| CO3            | Explain the modern storage structures and grain flow characteristics                          | K2                           |
| CO4            | Analyse and design silos using different pressure distribution theories                       | K3                           |
| CO5            | Explore the storage techniques for different food commodities and their handling              | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to food toxicology:</b> Definition, scope, Principles of toxicology, General mechanisms by which toxic chemicals causes disease in humans - Absorption, distribution, metabolism and excretion of toxic chemicals, Classification of food toxicants, factors affecting toxicity of compounds.                                                                                                                                                                                                 | <b>9</b>             |
| <b>2</b>          | <b>Natural and Derived Food toxicants:</b> Toxicants and allergens derived from plants, animals, marine algae, mushrooms etc. Microbial toxins –Mycotoxins Impacting Food Production and Manufacturing-, Guidance and regulations on mycotoxins in food, Toxicants generated during food processing and packaging such as nitrosamines, acrylamide, benzene, dioxins, furans etc., persistent organic pollutants, food carcinogen and mutagens and their mode of action, Transgenic approaches, Bioterrorism. | <b>9</b>             |
| <b>3</b>          | <b>Food allergens:</b> Types, Chemistry of food allergens, Food allergy and hypersensitivity, mechanisms of allergic-type reactions and allergenic components in foods. Food disorders associated with metabolism, lactose intolerance, and asthma, handle of food allergies.                                                                                                                                                                                                                                 | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Determination of toxins and risk assessment:</b> Quantitative and qualitative analysis of toxicants in foods; Biological determination of toxicants, Assessment of food safety – Risk assessment and risk benefit indices of human exposure, acute toxicity, mutagenicity and carcinogenicity, reproductive and developmental toxicity, neurotoxicity and behavioural effect, immunotoxicity. Laws and regulation of safety assessment of foods | <b>9</b> |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Acquire an idea about scope, basic principles of food toxicology, classifications and the factor affecting toxicity | <b>K3</b>                    |
| <b>CO2</b>     | Familiarize about natural and derived food toxicants and their mode of action                                       | <b>K3</b>                    |
| <b>CO3</b>     | Develop knowledge about Food allergens, toxicity of additives and difference between safety, hazard and toxicity    | <b>K3</b>                    |
| <b>CO4</b>     | Explain the methods for the Determination of toxins and their risk assessment                                       | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S6

### FOOD SUPPLY CHAIN MANAGEMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT636</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the fundamentals on logistic and supply chain management in food industries.
2. To study the various aspects of food supply chain management globally, and the pervasiveness of Information Technology in SCM.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Logistics and supply chain management:</b> Scope, Significance and Drivers; Basic Model – Primary and Secondary Activities; Role and Challenges of Logistics and supply chain management in food industry.                                                                                                                                                                                  | <b>9</b>             |
| <b>2</b>          | <b>Demand and supply management:</b> Forecasting techniques, Strategic planning for material sourcing, Outsourcing strategies, Warehouse strategies, Inventory models and control techniques.                                                                                                                                                                                                  | <b>9</b>             |
| <b>3</b>          | <b>Introduction to Refrigerated Cold Chain:</b> Importance and challenges in postharvest management- Major technologies in maintaining cold chain. Factors influencing refrigerated cold chain. Storage requirements of fruits and vegetables, milk and milk products, meat and meat products and marine products during transit.                                                              | <b>9</b>             |
| <b>4</b>          | <b>Applications of Packaging in logistics:</b> Types of packaging and packaging materials, Export & import packaging and labelling details, Containerization, Pervasiveness of IT in Supply Chain Management – ERP, Bar-coding, RFID, GPS, E-Procurement. Export and import procedure and Documentation, Risk management in global logistics, Customer relationship management in LSCM Module. | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                  | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|----------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Understand logistics and supply chain management                                 | <b>K1</b>                          |
| <b>CO2</b>     | Know about the procurement and warehousing strategies in SCM                     | <b>K2</b>                          |
| <b>CO3</b>     | Gain knowledge on use of application of refrigeration in food supply chain       | <b>K1</b>                          |
| <b>CO4</b>     | Understand the importance of information technology in packaging and supply      | <b>K1</b>                          |
| <b>CO5</b>     | Know about the relevance and concept of documentation in supply chain management | <b>K2</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S6

### ADVANCED EXTRUSION TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT637</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To impart knowledge on the working and principle of extruders in food technology.
2. To formulate, process and understand quality parameters of varied combinations in food extruder.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Food Extrusion:</b> Definition, introduction to extruders, principles and types, Uses of extruders in the food industry, Pre-conditioning of raw materials used in extrusion process, Extruder Selection, Design, and Operation for Different Food Applications.                                     | <b>9</b>             |
| <b>2</b>          | <b>Single screw extruder:</b> Principle of working, Net Flow, Operations, manufacturing of pasta and vermicelli. <b>Twin screw extruder:</b> Counter rotating and co-rotating twin screw extruder. Rheological Properties of Materials During the Extrusion Process, Advantages of Twin Screw Extruder. | <b>9</b>             |
| <b>3</b>          | <b>Extrusion Technology:</b> Classification of Breakfast cereals - Raw materials, process and quality testing for Ready to eat breakfast cereals. Texturized vegetable protein: Definition, Manufacturing process and quality parameters of TVP                                                         | <b>9</b>             |
| <b>4</b>          | <b>Effect of extrusion on food products:</b> Chemical and nutritional changes in food during extrusion, factors affecting extrusion, Net Flow, Packaging materials for extruded product. Recent Advances in extrusion technology: Carbon dioxide or Nitrogen assisted extrusion technology              | <b>9</b>             |

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**  
**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                    | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Explain the basic fundamentals, design of equipment and processing of different extruded products.                 | <b>K1</b>                          |
| <b>CO2</b>     | Explain the types of extruders and its impact on extrusion process, rheological behaviour and product quality.     | <b>K2</b>                          |
| <b>CO3</b>     | Discuss about the future trends and aspects in food extrusion                                                      | <b>K3</b>                          |
| <b>CO4</b>     | Perceive on the chemical and nutritional changes occurring in extrusion process and its technological advancements | <b>K2</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S6

### PROCESS INSTRUMENTATION AND CONTROL

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT638</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide basic understanding of designing and implementing practical control strategies in process industries.
2. To acquire knowledge on instrumentation performance characteristics
3. To understand measuring principle of different temperature and pressure measuring instruments

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to process dynamics and control:</b> – definition of terms- Laplace transform – transform of simple functions- derivatives and integrals- properties of Laplace transforms - final value theorem -initial value theorem- transition of transforms and functions- examples - inversion by partial fraction – solution of differential equation- qualitative nature of solutions- linear loop open system – first order systems -mercury thermometer- liquid level and mixing processes – response of these to different types of forcing functions- systems in series – interacting and non-interacting types | <b>9</b>             |
| <b>2</b>          | <b>Linear open loop systems:</b> – second order systems – mercury thermometer in well and manometer – impulse and step response of under damped, critically damped and over-damped system, their derivation – closed loop system – servo and regulator problems – block diagram development – controllers- types, basic principles and transfer functions -PID, PI and PD                                                                                                                                                                                                                                                    | <b>9</b>             |
| <b>3</b>          | <b>Introduction to stability of linear system:</b> - Routh Hurwitz criterion for stability – root locus technique- plotting the root locus diagram –                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | transportation lag and its effect on root locus diagram- Introduction to frequency response – Bode diagram for first order system – bode stability criterion , gain margin and phase margin                                                                                                                                                                                                                                                                                                                                                                             |          |
| <b>4</b> | <b>Instrumentation:</b> – definition, performance characteristics of an instrument – static and dynamic characteristics- temperature measurement – three types of thermometers -liquid filled, vapour pressure and gas type – bimetallic thermometer – resistance thermometer – principles of thermoelectricity like Seebeck effect, Peltier effect, Thomson effect - radiation methods like pyrometry, optical pyrometry, thermistor. Pressure measurement – manometer of U tube, well type and inclined type – bourdon tube, flat and corrugated diaphragm, capsules. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                    | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain open loop systems                                          | <b>K2</b>                    |
| <b>CO2</b>     | Analyse and apply the knowledge of linear closed loop system       | <b>K4</b>                    |
| <b>CO3</b>     | Acquire working knowledge of control system by frequency response  | <b>K3</b>                    |
| <b>CO4</b>     | Explain the performance characteristics of instruments             | <b>K1</b>                    |
| <b>CO5</b>     | Summarize different temperature and pressure measuring instruments | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

## SEMESTER S6

### ADVANCES IN FOOD PACKAGING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT635</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 5/3             | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Able to understand with the different packaging materials and packaging systems used in food industry.
2. Understand the properties of different packaging material and its manufacturing processes.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to Food packaging:</b> need of food packaging, Role of packaging in extending shelf life of foods packaging materials and various package forms, Food packaging systems, Product characteristics and package requirements.                                                                                                                                                                                        | <b>9</b>             |
| <b>2</b>          | <b>Different forms of packaging:</b> Rigid, semi-rigid, flexible forms of packaging, wooden boxes and crates, Paper and paperboards, Glass, Metal container, Types of cans- Tinplate containers, Tin free steel (TFS), Aluminium containers, Composite containers, Lacquers. Properties, advantages and limitations of the following packaging materials: Glass, aluminium, its foil, metal tin containers, Paper and paperboard. | <b>9</b>             |
| <b>3</b>          | <b>Advances in Packaging Technology:</b> Introduction, Active packaging, Vacuum Packaging, Controlled atmospheric packaging, Modified atmosphere packaging, Aseptic packaging, Biodegradable plastics, Edible gums, Coatings. Gas packaging, seal and shrink packaging. Form & fill sealing, Aseptic packaging systems, Retort pouches, RFID indicators.                                                                          | <b>9</b>             |
| <b>4</b>          | <b>Packaging systems for- Fruit &amp; vegetable products:</b> Dehydrated foods, Frozen foods, fish and fish products, meat and meat products, Dairy                                                                                                                                                                                                                                                                               | <b>9</b>             |

|  |                                                                                                                                                                                                                                                |  |
|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|  | products, carbonated beverage, tea, coffee, alcoholic beverages, confectionery- fat and oil, biscuits, cakes, bread, food grains, storage and handling packaging materials. Physical properties and barrier properties of packaging materials. |  |
|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <i>Attendance</i> | <i>Internal Ex</i> | <i>Evaluate</i> | <i>Analyse</i> | <i>Total</i> |
|-------------------|--------------------|-----------------|----------------|--------------|
| <b>5</b>          | <b>15</b>          | <b>10</b>       | <b>10</b>      | <b>40</b>    |

**Criteria for Evaluation (Evaluate and Analyse): 20 marks**

1. Visit to relevant industries
2. Students can collect data with the latest trends in packaging consulting the web sites and magazines
3. Identification of different types of packaging and packaging materials
4. Determination of tensile strength of given material.

**End Semester Examination Marks (ESE):**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                        | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• 2 questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> <li>• Each question carries 9 marks.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                               | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Understand the different uses of packaging materials its manufacturing process and properties | K1                           |
| CO2            | Understand the principle and working set up of different packaging systems                    | K1                           |
| CO3            | Evaluate the physical and barrier properties of different packaging materials                 | K2                           |
| CO4            | Implement different packaging materials for food products                                     | K3                           |
| CO5            | Identify the criteria to design packaging material based on type of foods                     | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 1   | 1   |     |     |     |     |     |     |      |      |      |
| CO2 | 3   | 2   | 1   | 2   |     |     |     |     |     |      |      |      |
| CO3 | 3   | 2   | 2   | 1   | 1   |     |     |     |     |      |      |      |
| CO4 | 1   | 1   | 2   | 3   | 1   | 1   |     |     |     |      |      |      |
| CO5 | 3   | 1   | 3   | 2   |     | 1   |     |     |     |      |      |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

## SEMESTER S6

### FOOD PACKAGING TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PBFTT604</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:1         | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 4               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course objectives:

1. Understand the importance and role of packaging in the food industry.
2. Explore various types of food packaging materials and their properties.
3. Learn about packaging requirements for different food categories

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Packaging Scope &amp; Importance:</b> Packaging of foods, requirement, importance and scope, frame work of packaging strategy, environmental consideration. Factors affecting shelf life of food material during storage, Interactions of spoilage agents with environmental factors as water, oxygen, light, pH, etc. and general principles of control of the spoilage agents; Difference between food infection, food intoxication and allergy                                                                                                                                                                                                                                                 | <b>9</b>             |
| <b>2</b>          | <b>Packaging Systems And Packaging Materials:</b> 15Packaging systems, types: flexible and rigid; retail and bulk; levels of packaging; special solutions and packaging machines, technical packaging systems and data management packaging systems, Different types of packaging materials, their key properties and applications, Metal cans, manufacture of two piece and three-piece cans, Plastic packaging, different types of polymers used in food packaging and their barrier properties. manufacture of plastic packaging materials, profile extrusion, blown film/ sheet extrusion, blow molding, extrusion blow molding, injection blow molding, stretch blow molding, injection molding | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |   |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 3 | <b>Glass containers:</b> types of glass used in food packaging, manufacture of glass and glass containers, closures for glass containers. Paper and paper board packaging, paper and paper board manufacture process, modification of barrier properties and characteristics of paper/ boards. Relative advantages and disadvantages of different packaging materials; effect of these materials on packed commodities, Nutritional labelling on packages, CAP and MAP, shrink and cling packaging, vacuum and gas packaging; Active packaging, Smart packaging, Packaging requirement for raw and processed foods, and their selection of packaging materials, Factors affecting the choice of packaging materials, Disposal and recycle of packaging waste, Printing and labelling, Lamination | 9 |
| 4 | <b>Packaging from starches and other plant and animal sources:</b> Biodegradable packaging systems, Non-Migratory Biopolymers, Testing methods for flexible materials, rigid materials and semi rigid materials; Tests for paper (thickness, bursting strength, breaking length, stiffness, tear resistance, folding endurance, ply bond test, surface oil absorption test, etc.), plastic film and laminates (thickness, tensile strength, gloss, haze, burning test to identify polymer, etc.), aluminum foil (thickness, pin holes, etc.), glass containers (visual defects, colour, dimensions, impact strength, etc.), metal containers (pressure test, product compatibility, etc.).                                                                                                       | 9 |

## Suggestion on Project Topics

### 1. Select a Focus Area:

- Choose sustainable packaging materials and technologies as the focus area for your project. Explore materials like biodegradable polymers, active packaging solutions, or advanced recycling techniques.

### 2. Literature Review:

- Conduct a comprehensive literature review on sustainable packaging materials and technologies.
- Gather information on theoretical frameworks, principles of sustainable packaging, regulatory standards (e.g., FDA guidelines), and case studies of successful implementations.

### **3. Define Objectives:**

- Clearly define the objectives of your project, such as evaluating the effectiveness of biodegradable packaging materials in extending shelf life or comparing the environmental impact of different packaging materials.

### **4. Plan Experimental Design:**

- Design experiments or simulations to achieve your objectives.
- Specify factors like packaging material selection (e.g., biopolymers, compostable materials), processing conditions (e.g., manufacturing techniques like extrusion or injection molding), and performance metrics (e.g., barrier properties, biodegradability).

### **5. Data Collection:**

- Conduct experiments or gather data using appropriate methods (e.g., barrier tests, degradation studies, mechanical properties testing).
- Document data from trials with different packaging materials and processing techniques.

### **6. Data Analysis:**

- Organize collected data systematically.
- Perform statistical analysis or use appropriate analytical methods (e.g., comparison of mechanical properties, degradation rates) to interpret your data.
- Present data analysis results using tables, graphs, or charts to illustrate trends and relationships.

### **7. Compare and Contrast Techniques:**

- Compare different sustainable packaging techniques within your focus area.
- Analyze factors such as effectiveness in preserving food quality, environmental impact, and economic feasibility.

### **8. Evaluate Results:**

- Evaluate the results of your experiments or simulations.
- Discuss how well your findings align with theoretical frameworks and existing practices in sustainable food packaging.
- Propose recommendations for improvements or modifications based on your findings.

**Course Assessment Method**  
(CIE: 60 marks, ESE: 40 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Project | Internal Ex-1 | Internal Ex-2 | Total |
|------------|---------|---------------|---------------|-------|
| 5          | 30      | 12.5          | 12.5          | 60    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                      | Part B                                                                                                                                                                                                                                                                  | Total |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 2 marks</li> </ul> <p>(8x2 =16 marks)</p> | <ul style="list-style-type: none"> <li>2 questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 2 sub divisions.</li> <li>Each question carries 6 marks.</li> </ul> <p>(4x6 = 24 marks)</p> | 40    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                  | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------|------------------------------|
| CO1            | Understand the basics and importance of food packaging                           | K2                           |
| CO2            | Interpret the food qualities preserved by using different packaging technologies | K2                           |
| CO3            | Apply the knowledge to design and manufacture food packages                      | K6                           |
| CO4            | Apply the knowledge for testing different packaging materials                    | K5                           |
| CO5            | Develop sustainable food packaging solutions                                     | K6                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   |     |     |     |     |     |     | 3   | 2   |      | 3    | 3    |
| CO2 | 3   |     |     |     |     |     |     | 3   | 2   |      | 3    | 3    |
| CO3 | 3   |     |     |     |     |     |     | 3   | 2   |      | 3    | 3    |
| CO4 | 3   |     |     |     |     |     |     | 3   | 2   |      | 3    | 3    |
| CO5 | 3   |     |     |     |     |     | 3   | 3   | 2   |      | 3    | 3    |

| 5             | Final Presentations                                                 | 5                     |
| 6             | Project Quality, Innovation and Creativity                          | 3                     |
| <b>Total</b>  |                                                                     | <b>30</b>             |

### 1. Project Planning and Proposal (5 Marks)

- Clarity and feasibility of the project plan
- Research and background understanding
- Defined objectives and methodology

### 2. Contribution in Progress Presentation and Question Answer Sessions (4 Marks)

- Individual contribution to the presentation
- Effectiveness in answering questions and handling feedback

### **3. Involvement in the Project Work and Team Work (3 Marks)**

- Active participation and individual contribution
- Teamwork and collaboration

### **4. Execution and Implementation (10 Marks)**

- Adherence to the project timeline and milestones
- Application of theoretical knowledge and problem-solving
- Final Result

### **5. Final Presentation (5 Marks)**

- Quality and clarity of the overall presentation
- Individual contribution to the presentation
- Effectiveness in answering questions

### **6. Project Quality, Innovation, and Creativity (3 Marks)**

- Overall quality and technical excellence of the project
- Innovation and originality in the project
- Creativity in solutions and approaches

## SEMESTER S6

### UNIT OPERATIONS IN FOOD PROCESSING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT611</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquaint and equip the students with different unit operations of food industries and their design features

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Size reduction:</b> Benefits, classification, determination and designation of the fineness of ground material, sieve/screen analysis, principle and mechanisms of comminution of food, Rittinger's, Kick's and Bond's equations, work index, energy utilization; Size reduction equipment: Principal types, crushers (jaw crushers, gyratory, smooth roll), hammer mills and impactors, attrition mills, tumbling mills, ultra-fine grinders, fluid jet pulverizer, cutting machines (slicing, dicing, shredding). | <b>9</b>             |
| <b>2</b>          | <b>Membrane separation:</b> General considerations, materials for membrane construction, ultra-filtration, processing variables, membrane fouling, applications of ultra-filtration in food processing, reverse osmosis, mode of operation, and applications; Membrane separation methods, demineralization by electro-dialysis, gel filtration, ion exchange, per-evaporation and micro filtration                                                                                                                    | <b>9</b>             |
| <b>3</b>          | <b>Food freezing:</b> Introduction, freezing point curve for food and water, freezing points of common food materials, Principles of food freezing, freezing time calculation by using Plank's equation; Freezing systems;                                                                                                                                                                                                                                                                                             | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                          |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Direct contact systems, air blast immersion; Changes in foods; Frozen food properties; freezing time, factors influencing freezing time, freezing/thawing time; Freeze concentration: Principles, process, methods; Frozen food storage: Quality changes in foods during frozen storage; Freeze drying: Heat mass transfer during freeze drying, equipment and practice. |          |
| <b>4</b> | <b>Extraction</b> – solid – liquid extraction (leaching) – material balance – equilibrium – multistage extraction – stage efficiency – solid – liquid extraction systems – Super Critical Fluid extraction – principles – solvents – Super critical extraction systems – application – Liquid – liquid extraction – principle – application                              | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                        | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Characterize different unit operations in food processing                              | <b>K1</b>                    |
| <b>CO2</b>     | Identify and evaluate size reduction mechanism and mixing of fluids                    | <b>K3</b>                    |
| <b>CO3</b>     | Explain the working of filtration/membrane separation equipments used in food industry | <b>K3</b>                    |
| <b>CO4</b>     | Explain the mechanisms of freezing and dehydration operation                           | <b>K3</b>                    |
| <b>CO5</b>     | Analyse different types of evaporators and extraction systems                          | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   | 2   |     |     | 1   |     |     |     |     |      |      |      |

## SEMESTER S6

### REFRIGERATION & AIR CONDITIONING IN FOOD INDUSTRY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT612</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To the study the application of various air conditioning and refrigeration systems in food industry
2. To understand psychrometric terms and freezing processes and their application in food related industry and operations.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Refrigeration:</b> Thermodynamics & Principles, reversed Carnot cycle, heat pump, unit of refrigerating capacity, coefficient of performance; Production of low temperatures, refrigerants- classification, nomenclature and properties (physical, chemical, safety, thermodynamic and economical); types of refrigeration systems and their components.     | <b>9</b>             |
| <b>2</b>          | <b>Ice manufacture:</b> principles and systems of ice production, Treatment of water for making ice, brines, freezing tanks, ice cans, air agitation, quality of ice, Cold storage design for different categories of food resource (size and shape, construction and material, insulation, vapour barriers, floors, frost-heave, interior finish and fitting.) | <b>9</b>             |
| <b>3</b>          | <b>Air-conditioning:</b> Psychrometry principles, factors affecting comfort air-conditioning, classification, sensible heat factor, industrial air-conditioning Winter/summer/year-round air-conditioning, unitary air-conditioning systems, central air-conditioning, Cooling load calculations.                                                               | <b>9</b>             |
| <b>4</b>          | <b>Applications of Refrigeration and Air-conditioning in different food products:</b> fruits, vegetables, meat, fish and poultry, dairy products, Handling                                                                                                                                                                                                      | <b>9</b>             |

|  |                                                                                                                     |  |
|--|---------------------------------------------------------------------------------------------------------------------|--|
|  | and distribution of food through Refrigerated and Air-conditioned transport,<br>Food freezing, Frozen food storage. |  |
|--|---------------------------------------------------------------------------------------------------------------------|--|

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                            | Part B                                                                                                                                                                                                                                                                                                             | Total     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                      | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Familiarize concepts of refrigeration and types, components and properties of refrigerants                           | <b>K2</b>                          |
| <b>CO2</b>     | Apply the refrigeration for production of ice and ice- related cold process in food industry                         | <b>K3</b>                          |
| <b>CO3</b>     | Identify the various components of Air Conditioning and compare different types of Air conditioning systems          | <b>K3</b>                          |
| <b>CO4</b>     | Analyze the various application of Refrigeration and Air-conditioning in different foods and food related operations | <b>K4</b>                          |

*Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create*

**CO-PO Mapping Table:**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 3   | 2   |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   | 2   | 3   | 1   |     |     |     |     |     |      |      |      |

## SEMESTER S6

### INSTRUMENTAL METHODS IN FOOD ANALYSIS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT613</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              |                 | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Provide an understanding of various chemical and instrumental methods for analyzing food.
2. Equip graduate students with detailed knowledge of modern techniques used in research, development, and inspection of food products in industry, analytical laboratories, and government agencies.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Spectroscopy:</b> Food Analysis, Nature and Concept of Food analysis, Spectroscopy, Electromagnetic spectrum, Beer Lamberts law, Absorbance, Construction of calibration curve, Principle, instrumentation of single and double beam UV-Visible spectrophotometer, IR, NMR and Raman Spectroscopy<br><b>Microscopy:</b> Scanning electron microscopy (SEM) – Principle Instrumentation, applications, Transmission electron microscopy (TEM)- Principle, Instrumentation, applications | <b>9</b>             |
| <b>2</b>          | <b>Chromatography:</b> Basis of chromatography (mobile and stationary phases, Chromatography: Theory & Principle, chromatographic parameter (partition coefficient, capacity factor, retention & dead time, Resolution& their calculation), Types of chromatographic techniques, HPLC, GC – Instrumentation and application                                                                                                                                                               | <b>9</b>             |
| <b>3</b>          | <b>Hyphenated technique:</b> Mass Spectroscopy and Chromatography coupling technique - Basics of mass spectrometry, components of mass spectrometer,                                                                                                                                                                                                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | applications of mass spectroscopy, Gas chromatography, GC MS, LCMS – instrumentation and applications                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |
| <b>4</b> | <p><b>Biological Techniques:</b> DNA and protein-based methods, Fundamental principle and instrumentation of the system, measurement techniques and interpretation of Polymerase Chain Reaction, Real Time Polymerase Chain Reaction, Enzyme Linked Immunosorbent Assay, Radio Immuno Assay, Use of PCR for detection of genetically modified organisms, Electrophoresis techniques.</p> <p><b>Innovative Analytical Techniques:</b> Biosensor, nanotechnology and biosensor – applications in food industry, Instrumental measurement of texture of food, viscometer, viscoanalysis, texture analysis</p> | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                       | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of spectroscopy principle, instrumentation and applications                                               | <b>K2</b>                    |
| <b>CO2</b>     | Identify chromatographic techniques and the application of these techniques to the separation and analysis of multi-component samples | <b>K3</b>                    |
| <b>CO3</b>     | Summarize different hyphenated techniques of instrumental methods in food analysis                                                    | <b>K2</b>                    |
| <b>CO4</b>     | Knowledge on application of different biological methods in food analysis                                                             | <b>K3</b>                    |
| <b>CO5</b>     | Describe the application of innovative instrumental techniques for food analysis                                                      | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S6

### POST HARVEST HANDLING OF FOOD MATERIALS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT614</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Provide an understanding of various handling techniques and storage methods.
2. Equip graduate students with detailed knowledge of traditional and modern storage techniques, changes occur during storage.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction:</b> Basic post- harvest physiology, definition, respiration and gas exchange, Effect of respiration on physiology, factors affecting respiration, Respiration control methods, Changes during post- harvest, physical and chemical changes, transpiration, water stress                                                                                                                                                                        | <b>9</b>             |
| <b>2</b>          | <b>Factors affecting post-harvest physiology and mechanical damages:</b> Preharvest factors on postharvest life, harvesting and handling injuries, storage conditions; temperature, RH, composition and its modification, Ethylene, Role of ethylene in ripening, Climacteric and non-climacteric fruits, ethylene biosynthesis, ethylene generators, ethylene control methods. Mechanical damage, chilling injury, freezing injury, quality and safety factors | <b>11</b>            |
| <b>3</b>          | <b>Handling and storage:</b> Maturity indices, Assessment of crop maturity, Changes during ripening, physical and chemical changes, change in colour, texture, flavour during storage,                                                                                                                                                                                                                                                                          | <b>11</b>            |

|          |                                                                                                                                                                                                                                                                                                                       |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Harvesting methods, Storage conditions and types, Storage characteristics of different fruits and vegetables, MAP and CAP: Biotic and abiotic factors; temperature, insect infestation, microbes; fungi, virus, bacteria etc                                                                                          |          |
| <b>4</b> | <b>Quality Improvement techniques:</b> Harvesting and handling techniques, coatings and treatments, insect control and microbial control, Post-harvest treatments, GAP, GHP, GMP, HACCP, measurement of product quality methods; destructive and non-destructive tests; physical chemical, biological, visual methods | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                      | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Identify the physiological and biochemical changes in horticultural produce after harvest and apply suitable control methods                                                         | <b>K2</b>                    |
| <b>CO2</b>     | Use suitable ripening techniques for the development of safe and quality ripened products Acquire insight on various factors involved in spoilage and the techniques for its control | <b>K3</b>                    |
| <b>CO3</b>     | Identify various storage methods for the shelf-life extension of horticultural produce                                                                                               | <b>K2</b>                    |
| <b>CO4</b>     | Acquire knowledge about different factors which affect the post-harvest life of fruits and vegetables.                                                                               | <b>K3</b>                    |
| <b>CO5</b>     | Apply the knowledge of quality control for the quality improvement of fruits and vegetables                                                                                          | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students with a comprehensive understanding of milk types, the various factors affecting these compositions, as well as the knowledge of milk's properties and sterilization techniques
2. To provide students with an in-depth understanding of centrifugation and membrane separation techniques
3. To equip students with the knowledge and skills necessary for the manufacture of various dairy products

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Properties, Reception and Storage of Milk:</b> Milk-Types-Composition-factors affecting composition of milk. Physical-Chemical and Thermal Properties- Reception and storage-cooling of milk - Different types of coolers and cooling systems.<br>Cleaning-basic principles-can washing - can washers-cleaning-in centralised and decentralized CIP system - cleaning of various equipment, corrosion control.                                     | <b>9</b>             |
| <b>2</b>          | <b>Pasteurization and Sterilization of milk:</b> Pasteurization - principles, objectives and methods - LTLT/holding pasteurization-types, advantages and disadvantages - HTST pasteurization-components and function of HTST pasteurizer, advantages and disadvantages.<br>Sterilization - In-bottle sterilization, UHT processing – vacreation - Indirect heating systems using plate heat exchangers, Direct heating – steam injection and infusion | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | <p><b>Homogenization:</b> Homogenization theory, effect of homogenization of milk, Homogenizer components - valves. Pumps - functions and efficiency of process-operation and maintenance. Types of homogenizers-stages of homogenization-importance</p> <p><b>Centrifugation and membrane separation:</b> Centrifugation-clarification-clarifiers and separators-separation efficiency-factors affecting fat percentage in cream-fat loss in skim milk.</p> <p>Construction of separator components- bactofuge treatment. Ultra filtration - Reverse osmosis process - Electro dialysis.</p> | <b>9</b> |
| <b>4</b> | <p><b>Manufacture of dairy products:</b> Butter manufacture – methods - cheese manufacture-methods. Yogurt, paneer. Skimmed milk powder Drum dryer-spray dryer-construction, powder recovery systems agglomeration.</p> <p>Ice-cream manufacture-overflow-types of freezers.</p>                                                                                                                                                                                                                                                                                                              | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | To understand the different types of milk and their compositions, the factors affecting these compositions and effectively apply principles of cleaning. | <b>K2</b>                    |
| <b>CO2</b>     | To comprehend different pasteurization and sterilization techniques and selecting appropriate methods for ensuring the safety of dairy products          | <b>K3</b>                    |
| <b>CO3</b>     | To implement various processes to improve the quality and safety of dairy products.                                                                      | <b>K4</b>                    |
| <b>CO4</b>     | To evaluate and apply the methods for manufacturing different dairy products                                                                             | <b>K5</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   |     |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 2   | 2   | 2   |     |     |     |     |     |     |      |      |      |
| <b>CO3</b> | 2   | 2   |     |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> | 3   | 2   | 2   |     | 2   | 2   |     |     |     |      |      |      |

## SEMESTER S6

### THERMAL PROCESSING OF FOOD

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT616</b> | <b>CIE Marks</b>   | 60             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 40             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Explain the fundamental concepts of thermal processing.
2. Identify and describe different thermal processing methods.
3. Analyse the effects of thermal processing on food quality and microbial safety.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Contact Hours</b> |

|          | methods, Effects of blanching on food quality and enzyme inactivation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |
| <b>3</b> | <p><b>Drying</b> - Mechanisms and methods of drying, Types of dryers: tray, drum, spray, and freeze dryers, Moisture content and drying kinetics. Freeze Drying- Principles and stages of freeze drying, Equipment and applications</p> <p>Quality retention and rehydration characteristics. Freezing - Principles of freezing and thawing, Freezing rate and its impact on food quality, Types of freezers: blast, plate, and cryogenic freezers</p> <p>Advanced Thermal Processing Techniques and its principle, application and impact on food quality and safety- Microwave and Radio Frequency Heating, Ohmic Heating, High-Pressure Processing (HPP), Novel Thermal Processing Techniques- Infrared heating, Pulsed electric field (PEF).</p> | <b>9</b> |
| <b>4</b> | <p><b>Quality and Safety of Thermally Processed Foods</b> - Impact of thermal processing on food quality attributes (colour, texture, flavour), Nutritional changes due to thermal processing, Safety considerations and regulations.</p> <p>Packaging for Thermal Processing - Packaging materials and their properties, Role of packaging in thermal processing, Compatibility of packaging materials with thermal processes.</p>                                                                                                                                                                                                                                                                                                                  | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                       | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                  | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | To understand the principles and importance of thermal processing in the food industry.                          | K2                           |
| CO2            | Gain knowledge about various thermal processing techniques such as pasteurization, sterilization, and blanching. | K3                           |
| CO3            | To learn about different methods of thermal processing and their impact on food quality and safety.              | K4                           |
| CO4            | Study the effects of thermal processing on food quality, safety, and nutritional value and packing.              | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   |     |     |     |     | 2   | 1   |     |     |      |      |      |
| CO2 | 3   |     | 2   |     | 1   |     |     |     |     |      |      |      |
| CO3 | 2   |     | 2   |     |     |     | 2   |     |     |      |      |      |
| CO4 | 3   |     |     |     |     | 2   |     | 2   |     |      |      |      |

| <b>Text Books</b> |                                                                |                             |                               |                               |

## SEMESTER S6

### ENGINEERING PROPERTIES OF FOOD MATERIALS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code:</b>                        | <b>OEFTT617</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquire knowledge about properties of food material that are important in processing
2. To study the measurement methods of engineering properties and analysis of food materials

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction</b> to engineering properties of biological materials, classification of food properties, food quality and safety<br><b>Physical properties:</b> Shape and size – criteria for describing shape and size<br>Volume and methods of measurement of volume, Density, Types, Method of measurement of apparent density, material density, particle density, bulk density, true density, Surface area measurement for fruits and vegetables, egg surface area, pore surface area. | <b>9</b>             |
| <b>2</b>          | <b>Frictional properties:</b> Laws of friction, effect of load and properties of contacting bodies. Effect of sliding velocity and contact surface temperature, effect of water film and surface roughness. Rolling resistance, angle of repose, angle of internal friction, pressure distribution in storage structures and compression chambers                                                                                                                                            | <b>9</b>             |
| <b>3</b>          | <b>Thermal properties:</b> Thermal conductivity, measurement of thermal conductivity, Specific heat, measurement of specific heat, enthalpy, thermal diffusivity, boiling point, freezing point, dielectric properties<br><b>Aerodynamic properties:</b> drag coefficient, terminal velocity, measurement of terminal velocity; application the properties in the harvesting, post-harvest                                                                                                   | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |   |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
|   | handling, processing, storage and how it affects consumer's perception of food quality and safety.                                                                                                                                                                                                                                                                                                                                                                                   |   |
| 4 | <b>Texture &amp; optical properties:</b><br>Subjective measurements – physiological aspects, psychological aspects, mechanical aspects. Imitative measurements- equipment's used, texture profile analysis, dynamic test for evaluation of food texture, mechanical test applicable to food materials – firmness and hardness, mechanics of hardness, dynamic hardness, effect of age, water content and temperature on texture of foods; colour, measuring equipment, L*a*b system. | 8 |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                           | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the significance and evaluation of physical properties of food materials                          | <b>K2</b>                    |
| <b>CO2</b>     | Acquire knowledge of frictional properties of food materials                                              | <b>K2</b>                    |
| <b>CO3</b>     | Recognize thermal, aerodynamic properties food and their measurement techniques.                          | <b>K2</b>                    |
| <b>CO4</b>     | Explain methods for the measurement of texture and colour of food material                                | <b>K2</b>                    |
| <b>CO5</b>     | Apply the knowledge of various properties to improve the qualitative and quantitative attributes of food. | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   |     |     |     |     |     |     |     |      |      | 1    |
| <b>CO2</b> | 3   | 2   | 2   |     |     |     |     |     |     |      |      | 1    |
| <b>CO3</b> | 3   | 2   | 3   |     |     |     |     |     |     |      |      | 1    |
| <b>CO4</b> | 3   | 2   |     |     |     |     |     |     |     |      |      | 1    |
| <b>CO5</b> | 3   | 3   |     |     |     |     |     |     |     |      |      | 1    |

| Text Books |                                                             |                                                     |                                           |                  |
|------------|-------------------------------------------------------------|-----------------------------------------------------|-------------------------------------------|------------------|
| Sl. No     | Title of the Book                                           | Name of the Author/s                                | Name of the Publisher                     | Edition and Year |
| 1          | , Physical properties of plants animal materials            | Mohensenin N N                                      | , Gordon and Breach publishers, New York, | 1980             |

**SEMESTER S6**  
**MODELLING AND SIMULATION OF FOOD**  
**PROCESSES LAB**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PCFTL607</b> | <b>CIE Marks</b>   | 50             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 0:0:3:0         | <b>ESE Marks</b>   | 50             |
| <b>Credits</b>                             | 2               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Lab            |

**Course Objectives:**

1. To provide an overview of the possibilities of process simulation as a tool for computer systems analysis, which minimizes risks and costs in experimentation.
2. To familiarise students with the techniques of modelling of engineering processes and of the developed model optimization

**Details of Experiment**

| <b>Expt. No</b> | <b>Experiment</b>                                                                            |
|-----------------|----------------------------------------------------------------------------------------------|
| <b>1</b>        | Simulation of extraction of multicomponent using DWSIM software.                             |
| <b>2</b>        | Simulation of distillation column using DWSIM software                                       |
| <b>3</b>        | Simulation of heat exchanger using DWSIM software                                            |
| <b>4</b>        | Simulation of CSTR using DWSIM software                                                      |
| <b>5</b>        | Simulation of plug flow reactor using DWSIM software                                         |
| <b>6</b>        | Simulation of refrigeration gas plant using DWSIM software                                   |
| <b>7</b>        | Simulation of Component Separator using DWSIM software                                       |
| <b>8</b>        | Simulation of Solids Separator using DWSIM software                                          |
| <b>9</b>        | Simulation of Continuous Cake Filter using DWSIM software                                    |
| <b>10</b>       | Regression and curve-fitting of data from reaction and enzyme kinetics using MATLAB software |
| <b>11</b>       | Simulation of Mixer using DWSIM software                                                     |
| <b>12</b>       | Simulation of rotary dryer using MATLAB-SIMULINK software                                    |
| <b>13</b>       | Numerical analysis of Newton Raphson method using MATLAB software                            |
| <b>14</b>       | Bisection Methods for Solving a Nonlinear Equation in MATLAB software                        |
| <b>15</b>       | Gaussian Elimination Method for Solving Simultaneous Linear Equations in MATLAB              |

**Course Assessment Method**  
**(CIE: 50 Marks, ESE 50 Marks)**

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Preparation/Pre-Lab Work, experiments, Viva and Timely completion of Lab Reports / Record. (Continuous Assessment) | Internal Exam | Total |
|------------|--------------------------------------------------------------------------------------------------------------------|---------------|-------|
| 5          | 25                                                                                                                 | 20            | 50    |

**End Semester Examination Marks (ESE):**

| Procedure/ Preparatory work/Design/ Algorithm | Conduct of experiment/ Execution of work/ troubleshooting/ Programming | Result with valid inference/ Quality of Output | Viva voce | Record | Total |
|-----------------------------------------------|------------------------------------------------------------------------|------------------------------------------------|-----------|--------|-------|
| 10                                            | 15                                                                     | 10                                             | 10        | 5      | 50    |

**Mandatory requirements for ESE:**

- Submission of Record: Students shall be allowed for the end semester examination only upon submitting the duly certified record.
- Endorsement by External Examiner: The external examiner shall endorse the record.

**Course Outcomes (COs)**

At the end of the course the student will be able to:

| Course Outcome |                                                                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | To describe food engineering processes in mathematical form and create simulation models of various types                                                    | <b>K1</b>                    |
| <b>CO2</b>     | To apply simulation techniques to solve complex system issues and to select feasible, if not optimum, solutions and configurations amongst competing designs | <b>K3</b>                    |
| <b>CO3</b>     | Use modern computing tools necessary for analysis of the experimental data                                                                                   | <b>K3</b>                    |
| <b>CO4</b>     | Practice ethical approaches in experimental investigation, collection and reporting of data and adhering to the safety ethics set by the laboratory.         | <b>K2</b>                    |
| <b>CO5</b>     | Communicate through oral and writing skills through viva and preparing reports of experimental work.                                                         | <b>K3</b>                    |

### **Continuous Assessment (25 Marks)**

#### **1. Preparation and Pre-Lab Work (7 Marks)**

- Pre-Lab Assignments: Assessment of pre-lab assignments or quizzes that test understanding of the upcoming experiment.
- Understanding of Theory: Evaluation based on students' preparation and understanding of the theoretical background related to the experiments.

#### **2. Conduct of Experiments (7 Marks)**

- Procedure and Execution: Adherence to correct procedures, accurate execution of experiments, and following safety protocols.
- Skill Proficiency: Proficiency in handling equipment, accuracy in observations, and troubleshooting skills during the experiments.
- Teamwork: Collaboration and participation in group experiments.

#### **3. Lab Reports and Record Keeping (6 Marks)**

- Quality of Reports: Clarity, completeness and accuracy of lab reports. Proper documentation of experiments, data analysis and conclusions.
- Timely Submission: Adhering to deadlines for submitting lab reports/rough record and maintaining a well-organized fair record.

#### **4. Viva Voce (5 Marks)**

- Oral Examination: Ability to explain the experiment, results and underlying principles during a viva voce session.

*Final Marks Averaging: The final marks for preparation, conduct of experiments, viva, and record are the average of all the specified experiments in the syllabus.*

## **Evaluation Pattern for End Semester Examination (50 Marks)**

### **1. Procedure/Preliminary Work/Design/Algorithm (10 Marks)**

- Procedure Understanding and Description: Clarity in explaining the procedure and understanding each step involved.
- Preliminary Work and Planning: Thoroughness in planning and organizing materials/equipment.
- Algorithm Development: Correctness and efficiency of the algorithm related to the experiment.
- Creativity and logic in algorithm or experimental design.

### **2. Conduct of Experiment/Execution of Work/Programming (15 Marks)**

- Setup and Execution: Proper setup and accurate execution of the experiment or programming task.

### **3. Result with Valid Inference/Quality of Output (10 Marks)**

- Accuracy of Results: Precision and correctness of the obtained results.
- Analysis and Interpretation: Validity of inferences drawn from the experiment or quality of program output.

### **4. Viva Voce (10 Marks)**

- Ability to explain the experiment, procedure results and answer related questions
- Proficiency in answering questions related to theoretical and practical aspects of the subject.

### **5. Record (5 Marks)**

- Completeness, clarity, and accuracy of the lab record submitted

## **FOOD TECHNOLOGY**

## SEMESTER S7

### FOOD INFORMATICS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT741</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To define and explain the scope, importance, and applications of food informatics in various sectors of the food industry.
2. To apply fundamental data analytics techniques, including descriptive, predictive, and prescriptive methods, using industry-specific tools and software.
3. To analyze the role and implementation of information systems in the food industry, focusing on ERP, supply chain management, and their impact on food safety and quality.
4. To understand and apply food safety management systems, standards, and regulations, emphasizing microorganism detection and the use of informatics in compliance and certification processes.
5. To explore and evaluate the application of emerging technologies such as block chain, IoT, sensor technologies, and AI in enhancing food traceability, quality, safety, and personalized nutrition.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Overview of Food Informatics- definition, scope, importance and application of various food industry, Data Sources in Food Informatics- Sources of data in food production, processing, and distribution, challenges in data collection and integration, errors in data representation, Information Systems in Food Industry, Enterprise Resource Planning, Supply chain management, Role of information systems in food safety and quality assurance. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>2</b> | Fundamentals of Data Analytics, different data analysis techniques(descriptive, predictive, prescriptive), Tools and software for data analysis in the food industry, Big data in food industries, role and its application in food production and supply chain management, Challenges and ethical considerations in data analytics for food systems. Data representation errors and detection and troubleshooting procedures.                                             | <b>9</b> |
| <b>3</b> | Food Safety and Traceability, Food Safety Management Systems, food safety standards and regulations, Microorganism detection and analysis: Emerging Foodborne Pathogens, Investigation of food borne illnesses outbreaks, Pathogen Detection Methods, Role of informatics in compliance and certification processes, Traceability in Food Supply Chains, Using informatics to identify and mitigate risks in food production and distribution.                             | <b>9</b> |
| <b>4</b> | Emerging technologies (block chain, IoT) enabling traceability in food supply chains, cloud computing, Sensor Technologies, Applications of IoT and sensors in monitoring food quality and safety, Artificial Intelligence in Food Informatics: food processing, packaging, and distribution, AI-driven decision support systems, Emerging trends such as precision agriculture and personalized nutrition, Merits and demerits of incorporation of AI in Food industries. | <b>9</b> |

**Course Assessment Method**  
**(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                             | Part B                                                                                                                                                                                                                                                                             | Total     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>• Each question carries 9 marks.</li><li>• Two questions will be given from each module, out of which 1 question should be answered.</li><li>• Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                                                                                | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Demonstrate comprehensive understanding and applications of food informatics across various sectors of the food industry                                                                                                       | <b>K2</b>                    |
| <b>CO2</b>     | Analyze different sources of data in food production and supply chains, identify challenges in data collection and integration                                                                                                 | <b>K3</b>                    |
| <b>CO3</b>     | Applying descriptive, predictive, and prescriptive analytics techniques to analyze food industry data using relevant software tools, with an emphasis on addressing data representation errors and troubleshooting procedures. | <b>K3</b>                    |
| <b>CO4</b>     | Evaluate the role of informatics in implementing and managing Food Safety Management Systems (FSMS)                                                                                                                            | <b>K5</b>                    |
| <b>CO5</b>     | Explore the emerging technologies and their implications in food industries                                                                                                                                                    | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S7

### FOOD LAWS AND REGULATIONS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT742</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide a general overview of food laws and regulations
2. To assist students in finding sources of information pertaining to food laws and regulations

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction: Concept of food safety, food security and nutrition security, Indian food regulatory regime (existing & old), FSSAI, PFA Act and Rules, food licensing and registration system, AGMARK, Legal metrology act 2009, Export (Quality Control and Inspection) Amendment Act, 1984, Voluntary Standards and Certification, BIS, food licensing and registration system, food import clearance system, essential commodity act, 1995.                                     | <b>9</b>             |
| <b>2</b>          | Food hazard contamination-biological (bacteria, viruses and parasites), chemical (toxic constituents / hazardous materials) pesticides residues / environmental pollution / chemicals) and physical factors, Risk assessment studies: risk management, risk characterisation and communication, concept and implementation of HACCP in food premises, use of permitted additives like colours, preservatives, emulsifiers, stabilisers, antioxidants, etc. and their regulations. | <b>9</b>             |
| <b>3</b>          | Regulations of nutrition labelling, nutrient level claims, and health claims, Regulations of standard of identity and quality, Introduction to the Food, Drug, and Cosmetic Act, Introduction to OIE & IPPC, Other International                                                                                                                                                                                                                                                  | <b>9</b>             |

|          |                                                                                                                                                                                                                                             |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Food Standards (e.g. European Commission, USFDA etc), Introduction to WTO Agreements: SPS and TBT Agreement, Export & Import Laws and Regulations, WHO/FAO Expert Bodies (JECFA/JEMRA/JMPR)                                                 |          |
| <b>4</b> | Voluntary quality standards and certifications-GMP, GHP, GAP, Good Animal Husbandry Practices, ISO 9000, ISO 22000, ISO 14000, ISO 17025, PAS 22000, FSSC 22000, BRC, Halal & Kosher standards, concept of six sigma, TQC, NABL, NABH, NBQP | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                            | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the basic concept of food laws and regulations and major regulatory bodies in India                | <b>K2</b>                    |
| <b>CO2</b>     | Apply the concept of food contamination, risk assessment and HACCP application in food                     | <b>K3</b>                    |
| <b>CO3</b>     | Understand regulations related to labelling and various international food safety standards and agreements | <b>K2</b>                    |
| <b>CO4</b>     | Analyse sanitary regulations and ISO specifications                                                        | <b>K4</b>                    |
| <b>CO5</b>     | Explain the basic concept of food laws and regulations and major regulatory bodies in India                | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S7

### NANOTECHNOLOGY IN FOOD

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT743</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the applications of nanotechnology in food industry
2. Design and tailoring of advanced nanotechnological methods to facilitate emerging methods for sustainable food security

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                        | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Module 1: Introduction to Nanotechnology in Food Introduction to Nanotechnology – Definitions – Historical development – Scope and applications in the food industry. Nanomaterials – Types – Properties – Synthesis methods. Applications of Nanotechnology in Food – Food packaging – Food safety – Food processing – Nutrient delivery systems. | <b>9</b>             |
| <b>2</b>          | Module 2: Nanomaterials in Food<br>Nanomaterials – Characteristics – Functional properties – Mechanisms of action. Types of Nanomaterials used in Food – Organic nanomaterials – Inorganic nanomaterials – Composite nanomaterials. Safety and Toxicity of Nanomaterials – Regulatory aspects – Risk assessment – Toxicological studies.           | <b>9</b>             |
| <b>3</b>          | Module 3: Nanotechnology in Food Processing and Preservation<br>Nanotechnology in Food Processing – Enhancement of food texture – Flavor improvement – Stability and shelf-life extension. Nanotechnology in Food Preservation – Antimicrobial properties – Controlled release of preservatives                                                    | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                        |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | – Nano-encapsulation techniques. Nanotechnology in Food Packaging – Intelligent packaging – Active packaging – Barrier properties enhancement                                                                                                                                                                                                                          |          |
| <b>4</b> | Module 4: Future Trends and Innovations in Food Nanotechnology<br>Emerging Trends in Food Nanotechnology – Nano-biosensors – Nano-coatings – Smart delivery systems. Innovations in Food Nanotechnology – Recent advancements – Case studies – Future prospects. Ethical and Environmental Considerations – Public perception – Ethical issues – Environmental impact. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of optimization, including various types and formulations of optimization problems.                                                          | <b>K2</b>                    |
| <b>CO2</b>     | Apply classical optimization techniques to both single and multi-variable problems, utilizing methods such as the simplex method and Lagrange multipliers.               | <b>K3</b>                    |
| <b>CO3</b>     | Implement numerical methods and algorithms for solving complex optimization problems, including gradient descent and interior point methods.                             | <b>K4</b>                    |
| <b>CO4</b>     | Utilize advanced optimization techniques like dynamic programming, genetic algorithms, simulated annealing, and particle swarm optimization for real-world applications. | <b>K5</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   | 3   |     |     |     |     |     |     |      |      | 1    |
| <b>CO2</b> | 3   | 2   |     |     |     |     |     |     |     |      |      | 1    |
| <b>CO3</b> | 3   | 2   | 1   |     |     |     |     |     |     |      |      | 1    |
| <b>CO4</b> | 3   | 2   | 1   |     |     |     |     |     |     |      |      | 1    |

| Text Books |                                                                                              |                            |                       |                   |

## SEMESTER S7

### FOOD INDUSTRY WASTE MANAGEMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT744</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Understand the extent of wastes produced in different food industries
2. Identify the various by-products produced in food industries and their utilization
3. Analyze the strategies adopted for disposal of solid and liquid wastes
4. Distinguish various wastewater treatment methods in food industries

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Sources, classification and characterization of food industry waste from different industries - fruit and vegetable processing industry, beverage processing industry, sugar industry, dairy industry, meat and fish processing industry and sugar industry.                                                                                                                                                                                              | <b>9</b>             |
| <b>2</b>          | Characterization and utilization of by-products from cereals, pulses, oilseeds, fruits, vegetables, plantation, dairy, eggs, meat, fish and poultry processing industries. Elements of importance in efficient management of wastes from aforesaid food industries. Standards for emission or discharge of environmental pollutants from food processing industries. Characterization of food industries effluents, in terms of parameters of importance. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Physical, chemical and biological treatment strategies for solid and liquid wastes. Biological composting, Biogas and Vermicomposting. Unit concept of treatment of food industry effluents: Screening, sedimentation, floatation as per and primary treatments, biological oxidations: objectives, organisms, reactions, oxygen requirements, aeration devices.                                                                                               | <b>9</b> |
| <b>4</b> | Effect on characteristic parameters of effluents in treatments using lagoons, trickling filters, activated sludge process, oxidation ditches, UASB, rotating biological contractors and their variations and advanced modifications. Advanced wastewater treatment systems: physical, physicochemical and chemical treatments. Coagulation and flocculation, disinfection, handling and disposal of sludge and treated effluents conforming to EPA provisions. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 Marks, ESE: 60 Marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|--------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                            | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24Marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 Marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Demonstrate comprehensive understanding of wastes produced by different food industries. | <b>K1, K2</b>                |
| <b>CO2</b>     | Analyze the various by-products produced in food industries and their utilization.       | <b>K3,K4</b>                 |
| <b>CO3</b>     | Applying various strategies for disposal of solid and liquid wastes.                     | <b>K2,K3</b>                 |
| <b>CO4</b>     | Evaluate the different strategies adopted for effluent treatment                         | <b>K4, K5</b>                |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 2   |     |     |     | 2   |     |     |     |     |      |      | 3    |
| <b>CO2</b> | 2   | 2   |     |     | 2   | 2   |     |     |     |      |      | 3    |
| <b>CO3</b> | 2   | 2   |     |     | 2   |     |     |     |     |      |      | 3    |
| <b>CO4</b> | 3   | 2   |     |     | 3   | 2   |     |     |     |      |      | 3    |

| Text Books |                                                              |                      |                                              |                   |

## SEMESTER S7

### EMERGING TECHNIQUES IN FOOD QUALITY & SAFETY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT746</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To explore the area of emerging technologies involved in food quality as well as food safety
2. To understand the development of new approaches to food quality evaluation

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Criteria for quality control: Principles of food safety Historical developments - need for quality control and safety- strategy and criteria for food safety - microbiological criteria for safety and quality- Ways of describing food quality: Composition, appearance, kinesthetic and flavour attributes Nutritional quality of foods and its assessment (content and quality of nutrients). Definition- Aspects of quality - Quality control tools. Methods of food quality evaluation - Reference and standard methods for chemical and microbiological analysis, Comparison of newer and rapid methods | <b>9</b>             |
| <b>2</b>          | The role of food quality and safety evaluation. Sensory quality and its evaluation, instrumental measurement of sensory attributes such as colour, viscosity, texture, specific gravity. Rheological and textural characteristics, Use of rheological properties in food science and engineering. Texture profile analysis. Sensory evaluation using artificial intelligence, Application of Computer Vision Systems for Objective Assessment of Food Qualities- Evaluation of Color- Evaluation of Texture, Evaluation of shape and size. Nanotechnology in Food Quality and Safety Evaluation System        | <b>9</b>             |
| <b>3</b>          | NIR Spectroscopy for Chemical Composition and Internal Quality in Foods-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                             |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Principle of the Technique- Device and Apparatus Applications. Electronic Nose for Detection of Food Flavor and Volatile Components. Biosensors for Evaluating Food Quality and Safety                                                                                                      |          |
| <b>4</b> | Quality Measurements Using Nuclear Magnetic Resonance and Magnetic Resonance Imaging- Principles of Magnetic Resonance Equipment and applications. Ultrasound Systems for Food Quality Evaluation. Hyperspectral and Multispectral Imaging Technique for Food Quality and Safety Inspection | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                         | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Identify the historical developments and strategies in food safety and quality control.                                                                 | <b>K2</b>                    |
| <b>CO2</b>     | Evaluate the nutritional quality of foods through the assessment of nutrient content and quality.                                                       | <b>K2</b>                    |
| <b>CO3</b>     | Apply sensory evaluation techniques and instrumental measurements to assess food quality attributes like texture, color, and flavour.                   | <b>K3</b>                    |
| <b>CO4</b>     | Analyse the role of advanced technologies such as NIR spectroscopy, electronic noses, and biosensors in food quality and safety evaluation.             | <b>K2</b>                    |
| <b>CO5</b>     | Explain the integration of artificial intelligence and computer vision systems to objectively evaluate food qualities such as color, texture, and size. | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S7

### FOOD PLANT SANITATION & HYGEINE

|                                            |                   |                    |                |
|--------------------------------------------|-------------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT747</b>   | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0           | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3                 | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Food Plant Layout | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To Gain knowledge of the fundamental principles underlying food safety and sanitation practices in food processing plants.
2. To Understand the importance of maintaining high standards of sanitation to prevent foodborne illnesses and ensure consumer safety.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Food Plant Sanitation Fundamentals of Food Safety and Sanitation. Definition and importance of sanitation in food processing. Principles of food hygiene and sanitation practices. Overview of foodborne illnesses and their impact on public health. Sanitary Design and Layout of Food Plants. Principles of sanitary design in food processing facilities. Layout considerations for minimizing cross-contamination. Importance of proper drainage, ventilation, and lighting. Cleaning and Sanitizing Procedures Types of cleaning agents and sanitizers used in food plants. Cleaning schedules and protocols for equipment, surfaces, and utensils. Validation and verification of cleaning effectiveness. | <b>9</b>             |
| <b>2</b>          | Food Plant Hygiene Practices: Personal Hygiene and Employee Practices. Importance of personal hygiene for food handlers. Requirements for protective clothing, handwashing, and personal behavior. Employee training and education on hygiene practices. Pest Control and Waste Management                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Integrated pest management strategies in food facilities. Waste handling and disposal practices. Role of sanitation in preventing pest infestations. Water Quality and Control Importance of water quality in food processing. Water source selection, treatment, and monitoring. Hygienic design of water supply systems.                                                                                                                                                                                                                                                                                                                                                                                                                     |          |
| <b>3</b> | Sanitation in Food Processing Equipment and Facilities: Equipment Cleaning and Maintenance Procedures for disassembly, cleaning, and reassembly of equipment. Maintenance schedules and preventive maintenance programs. Hygienic design principles for equipment and utensils. Facility Sanitation and Environmental Monitoring Cleaning protocols for floors, walls, and ceilings. Air quality management and ventilation systems. Environmental monitoring programs for microbial and allergen control.                                                                                                                                                                                                                                     | <b>9</b> |
| <b>4</b> | Regulatory Compliance and Quality Assurance. Food Safety Regulations and Standards Overview of global and local food safety regulations (e.g., FDA, USDA, EU standards). Compliance requirements for food processing facilities. Role of quality assurance in maintaining sanitation standards. Auditing and Inspection Procedures Internal and external audits for sanitation and hygiene. Preparation for regulatory inspections and audits. Corrective actions and continuous improvement in sanitation practices. Emerging Trends and Technologies Innovations in sanitation equipment and technologies. Adoption of automation and digital tools for sanitation monitoring. Future challenges and opportunities in food plant sanitation. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                             | Part B                                                                                                                                                                                                                                                                             | Total     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>• Each question carries 9 marks.</li><li>• Two questions will be given from each module, out of which 1 question should be answered.</li><li>• Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                   | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Describe principles of food hygiene and sanitation practices to ensure food safety.               | K2                           |
| CO2            | Evaluate the effectiveness of cleaning and sanitizing procedures in food processing environments. | K3                           |
| CO3            | Explain the regulatory requirements and standards for food plant sanitation and hygiene.          | K2                           |
| CO4            | Elaborate emerging trends and technologies in food plant sanitation for future advancements.      | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S7

### FAT AND OIL PROCESSING TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT748</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To comprehend the nutritional roles of fats and oils in the human diet, including their impact on health
2. To gain proficiency in the extraction, refining, and processing techniques of fats and oils

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Fundamentals of Fats and Oils: Natural sources of vegetable oils: coconut, palm, peanut, rice bran, sesame, mustard, sunflower seeds. Production status and oil content. Physical properties: viscosity, melting point. Chemical properties: hydrolysis, hydrogenation, oxidation, polymerization. Importance of fatty acids and their classifications. Role of oils in nutrition. Impact of fatty acids on health                                      | <b>9</b>             |
| <b>2</b>          | Oil Extraction Techniques: Mechanical Extraction Methods Ghani, power Ghani, rotary, hydraulic press, screw press, expellers, filter press. Principles of operation and maintenance. Solvent Extraction Process steps and continuous solvent extraction for rice bran, soybean, and sunflower oils. Extraction methods for groundnut and cottonseed oils. Special Oils Production processes for palm oil, virgin coconut oil, and other specialty oils. | <b>9</b>             |
| <b>3</b>          | Refining and Processing of Oils: Refining Processes Objectives and characterization. Techniques: degumming, deacidification (acid refining), bleaching, deodorization, winterization. Hydrogenation of fats: production of vanaspati, margarine, ghee, and butter Specialty Oils and Products                                                                                                                                                           | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Conjugated linoleic acid (CLA), gamma linolenic acid (GLA), oils from microorganisms, lecithin, transgenic oils, fish oil. Production and processing of non-edible oils: castor oil, linseed oil, vegetable waxes.                                                                                                                                                                                                                                                                    |          |
| <b>4</b> | Applications, Quality Standards, Packaging and Storage Requirements and properties of packaging materials: tinplate, semi-rigid, glass, PET, PVC, flexible pouches. Changes during storage: causes of rancidity, atmospheric oxidation, enzyme action, free fatty acids, color changes.<br>Industrial Applications and Standards Industrial uses: soap, candles, paints, varnishes. Quality regulations: ISI, AGMARK standards. Safety aspects and HACCP standards in oil industries. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                   | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Describe the Characteristics and Properties of Fats and Oils                                                      | <b>K2</b>                    |
| <b>CO2</b>     | Evaluate various mechanical extraction methods                                                                    | <b>K3</b>                    |
| <b>CO3</b>     | Explain Refining and Processing Processes of Oils                                                                 | <b>K2</b>                    |
| <b>CO4</b>     | Assess the production and processing techniques of non-edible oils and specialty oils.                            | <b>K2</b>                    |
| <b>CO5</b>     | Describe quality regulations (e.g., ISI, AGMARK) and safety standards (e.g., HACCP) relevant to the oil industry. | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

#### Course Objectives:

1. Understand the fundamental concepts of rheology and its applications in food technology.
2. Analyze the impact of food structure on the rheological properties of various food products.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Some Basic concepts of Rheology: Introduction to Rheology, Biological systems and Mechanical properties, Force deformation behaviour, Uniaxial stress, Young's modulus, Stress strain behaviour, Elastic plastic behaviour, Evaluation of Poisson's ratio, Bulk stress strain behaviour, Physical state of a material, Classical ideal materials, Time effects (viscoelasticity), Rheological equations, Rheological models                                                                                  | <b>9</b>             |
| <b>2</b>          | Rheological Properties: Types of Deformation: Shear Flow, Extensional (Elongational) Flow, Volumetric Flows, Viscoelastic characterization of materials- Stress-strain behaviour, Creep, Stress relaxation, Dynamic tests, Viscoelastic behaviour, Viscometry, Apparent viscosity, Intrinsic viscosity, Newtonian and Non-Newtonian fluids, Pseudoplastic flow behaviour, Thixotropic flow behaviour, Dilatant flow behaviour, Rheopectic flow behaviour, Plastic flow behaviour, Phase transition in foods. | <b>9</b>             |
| <b>3</b>          | Measurement of Rheological property and Applications: Different viscosity measurement and viscometers: Rotational viscometers, Vibrational (Oscillation) viscometer, Bostwick consistometer, Pressure-Driven Flow Viscometers, Capillary tubes and Falling sphere type, Torsion Gelometer for Solid Foods, Texture of Foods: Dough testing instruments, Application of                                                                                                                                       | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Rheology in fluid food handling and processing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |
| <b>4</b> | <p>Fundamentals of Food Microstructure: Introduction, Food structure, Factors affecting structure, Microstructure Elements and their Interactions: Water, Protein, Fat, Polysaccharides and other components in food, Microstructure and its relationship with quality and stability of foods: Frozen foods, confectionary and bakery products, Extruded foods, Dried foods, Non-thermal processing Technologies for Fabrication of Microstructures, Engineered food microstructure</p> <p>Examination of food microstructure: Light Microscopy, Fluorescence microscopy, Confocal Laser Scanning Microscopy (CLSM), Polarizing microscopy, X ray Analysis, Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Immunolabeling Techniques</p> | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <i>Attendance</i> | <i>Internal Ex</i> | <i>Evaluate</i> | <i>Analyse</i> | <i>Total</i> |
|-------------------|--------------------|-----------------|----------------|--------------|
| <b>5</b>          | <b>15</b>          | <b>10</b>       | <b>10</b>      | <b>40</b>    |

**Criteria for Evaluation (Evaluate and Analyse): 20 marks**

**1. Problem Definition (2 points)**

- Check for clarity and completeness of the problem definition.
- Check for clear objectives and divide into sub objectives

**2. Problem Analysis (4 points)**

- Examine the problem and identify the variables and responses
- Divide the problem to manageable parts

**3. Implementation of software (2 points)**

- Use suitable software for getting the solution
- Check for the appropriateness of tools used

**4. Evaluate (4 points)**

- Evaluate the proposed solution.
- Assess the correctness of solution.

**5. Validation of the results (4 points)**

- Validate the results using available data.
- Do the error analysis of the results obtained.

#### 6. Conclusion and presentation (4 points)

- Summarize the results obtained
- Do critical thinking of the results obtained and evaluate.
- Submit a technical report

#### End Semester Examination Marks (ESE):

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                        | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <b>(8x3 =24marks)</b> | <ul style="list-style-type: none"> <li>• 2 questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> <li>• Each question carries 9 marks.</li> </ul> <b>(4x9 = 36 marks)</b> | <b>60</b> |

#### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                             | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the rheological properties of food and their significance in food processing                     | <b>K2</b>                    |
| <b>CO2</b>     | Describe the various of flow behaviour                                                                      | <b>K2</b>                    |
| <b>CO3</b>     | Differentiate different types of viscometers, understand their working and applications in food industry    | <b>K2</b>                    |
| <b>CO4</b>     | Develop the conceptual knowledge of food microstructure which can be utilized at industrial levels.         | <b>K2</b>                    |
| <b>CO5</b>     | Understand the working principle and applications of different techniques used to study food microstructure | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> |     | 2   | 1   |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   | 2   | 2   | 1   |     | 2   |     |     |     |      |      |      |
| <b>CO3</b> | 2   |     |     |     | 3   | 2   |     |     |     |      |      |      |
| <b>CO4</b> | 2   | 1   | 1   |     |     | 2   |     |     |     |      |      |      |
| <b>CO5</b> | 2   |     |     |     | 3   |     |     |     |     |      |      |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

| <b>Text Books</b> |                                                                     |                             |                                    |                         |
|-------------------|---------------------------------------------------------------------|-----------------------------|------------------------------------|-------------------------|
| <b>Sl. No</b>     | <b>Title of the Book</b>                                            | <b>Name of the Author/s</b> | <b>Name of the Publisher</b>       | <b>Edition and Year</b> |
| 1                 | Understanding and controlling the microstructure of complex foods   | D. Julian McClements        | CRC Press                          |                         |
| 2                 | Food Microstructure and its Relationship with Quality and Stability | Sakamon Devahastin          | Woodhead Publishing                |                         |
| 3                 | Physical Properties of Plant and Animal Materials                   | Nuri N Mohesenin            | Gordon & Breach Science Publishers |                         |

## SEMESTER S7

### ICT APPLICATIONS IN FOOD INDUSTRY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT751</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the importance of computerization in food industry and the applications of ICT in food industries.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Computerization in the Food Industry Importance and benefits of ICT in food processing. Operating environments and information systems. Supervisory Control and Data Acquisition (SCADA) Systems. Overview of SCADA systems: hardware, firmware, software, and protocols. Use cases in various types of food industries. Spreadsheet Applications for Engineering Problems. Data interpretation and problem-solving using spreadsheets. Creating charts, using macros, add-ins, and Solver for engineering applications.                                                 | <b>9</b>             |
| <b>2</b>          | Web Technologies and MATLAB in Food Industry Web Hosting and Webpage Design. Basics of web hosting, FTP for file transfer. Design considerations for online food process control. MATLAB Applications in Food Industry. Introduction to MATLAB: computing basics, script files, editor/debugger. Problem-solving methodologies using MATLAB for numeric and matrix operations. Advanced Tools and Computational Fluid Dynamics (CFD)Toolboxes Useful in Food Industry Overview of MATLAB toolboxes: curve fitting, fuzzy logic, neural networks, image processing, statistical analysis. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Introduction to Computational Fluid Dynamics (CFD). Governing equations of fluid dynamics. Models of flow, boundary conditions, discretization technique. Introduction to CFD Software (GAMBIT and FLUENT) Overview of CFD software applications in food and beverage industry. Hands-on practice with GAMBIT and FLUENT.                                                                                                                                                                                                                                           | <b>9</b> |
| <b>4</b> | LabVIEW for Data Acquisition and Control. Introduction to LabVIEW environment. Data acquisition using NI-DAQ and simulated data. Basic programming concepts in LabVIEW. ICT Applications in Food Industry. Role of ICT in food processing: robots, data collection, and wireless sensors. Data processing technologies: big data analysis, machine learning, cloud computing. Machine Learning and Image Processing. Overview of machine learning algorithms and applications in the food industry. Image processing techniques for quality control and inspection. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the importance and benefits of Information and Communication Technology (ICT) in the food industry.                                                              | <b>K2</b>                    |
| <b>CO2</b>     | Solve numeric and matrix operations using MATLAB to address engineering challenges in food processing.                                                                   | <b>K3</b>                    |
| <b>CO3</b>     | Understand the governing equations of fluid dynamics and apply models of flow, boundary conditions, and discretization techniques in Computational Fluid Dynamics (CFD). | <b>K2</b>                    |
| <b>CO4</b>     | Describe the role of ICT in integrating robots, wireless sensors, and data collection technologies in the food industry.                                                 | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   | 3   |     | 3   |     |     |     |     |      |      | 3    |
| <b>CO2</b> | 3   | 2   | 3   |     | 3   |     |     |     |     |      |      | 3    |
| <b>CO3</b> | 3   | 2   | 3   |     | 3   |     |     |     |     |      |      | 3    |
| <b>CO4</b> | 3   | 2   | 3   |     | 3   |     |     |     |     |      |      | 3    |

## SEMESTER S7

### ENERGY MANAGEMENT IN FOOD INSUSTRY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT752</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To optimize energy use in food processing operations
2. To foster an understanding of sustainable practices in food processing.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Fundamentals of Energy Management in Food Industry, Introduction to energy sources and their relevance in food processing. Basics of energy auditing and energy efficiency assessments. Energy conservation principles and techniques specific to food processing. Case studies highlighting successful energy management practices in food industry.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>9</b>             |
| <b>2</b>          | Energy Conservation Techniques- Thermal energy conservation techniques in food processing, Electrical energy conservation strategies and technologies, Renewable energy integration in food industry operations: Solar Energy: Solar PV systems: components, sizing, and installation considerations. Applications of solar energy in food processing (e.g., water heating, electricity generation). Economic feasibility analysis and incentives for solar energy adoption. Case studies of food processing facilities integrating solar energy and their experiences. Biomass Energy: Overview of biomass energy sources (biogas, biomass boilers). Utilization of biomass for heat and power generation in food processing. Environmental considerations and sustainability aspects of biomass energy. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Energy Management Systems (EnMS) and Standards. Overview of ISO 50001:2018 standard for energy management systems (EnMS). Implementation steps and requirements for EnMS in food processing units. Monitoring, measurement, and verification techniques for EnMS effectiveness. Case studies on EnMS implementation and certification in the food industry.                                                                                                                                                                                                                                                                                                  | <b>9</b> |
| <b>4</b> | Socio-Economic and Environmental Aspects of Energy Management Socio-economic benefits of energy efficiency in the food industry. Environmental impacts of energy use in food processing and mitigation strategies. Greenhouse Gas Emissions Reduction: Assessment of carbon footprint in food processing operations. Strategies for mitigating greenhouse gas emissions through energy efficiency. Case studies on successful implementation of emission reduction initiatives. Role of government policies, incentives, and regulations in promoting energy efficiency. Future trends and innovations in energy management for sustainable food processing. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                            | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Define and explain the basic concepts of energy management in the context of food processing.                                                              | <b>K2</b>                    |
| <b>CO2</b>     | Apply Energy Conservation Techniques in Food Processing                                                                                                    | <b>K3</b>                    |
| <b>CO3</b>     | Interpret and apply the ISO 50001:2018 standard for energy management systems (EnMS) in food processing units.                                             | <b>K3</b>                    |
| <b>CO4</b>     | Assess the environmental impacts of energy use in food processing operations, particularly in terms of greenhouse gas emissions and resource conservation. | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S7

### FOOD PRODUCTS MONITORING & CONTROL

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT753</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To gain the knowledge of instrumentation in the field of monitoring and control
2. To familiarize monitoring and control of Flavour, Colour, Structure and Chemical contamination of food.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Product monitoring and process control , the concept of Product and Process Monitoring in food industries. Process Control – Objectives, Control loop, Loop elements and their functions, Modes of process control, Control techniques, control equipment. Definition of quality - Optimization paradigm, Quality-prediction model based on quality kinetics and process state equations. Quality factors- appearance, texture and flavour. Appearance factors – size and shape, colour and gloss, consistency. Textural Factors – measuring texture, texture changes. Flavour Factors – influence of colour and texture on flavour - Taste Panels. Simulation modelling – Process and Product Optimization - Optimization procedures – Search methods, Response surface, Differentiation & Programming methods - Neural Networks - Optimization software | <b>9</b>             |
| <b>2</b>          | Instrumentation for monitoring and control Real-time Instrumentation – Sensors - Chemo sensors, biosensors, immune-sensors and DNA probes base devices with working principles. Requirements of on-line sensors. Biosensors – Construction, types, working principles, applications, merits                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>9</b>             |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |

|   | and limitations. E-Nose & E-Tongue – Simulation of natural organs, Components & their functions, Applications. Computer based monitoring and control - Advanced instruments - microwave measurements of product variables, ultrasonic instrumentation, conductance/impedance techniques for microbial assay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |   |
| 3 | Monitoring and control of Flavour & Colour Flavour analysis - Flavour bioassays – Gas Chromatography, Olfactometry techniques - Isolation, Separation and detection/Identification of flavour compounds – GC-MS, LC-MS, NMR, FTIR - Analysis of chiral compounds Formation of flavour compounds in milk and milk products during heat processing like UHT processing, caramelization and extrusion cooking. Fermentation and ripening and storage - Maillard Browning. Aroma loss or retention during the drying process - Industrial processes for extraction of desirable and undesirable volatile components from fresh and/or stored products by supercritical fluid (SCF) technique. Colour Characterization - Colour and appearance - gloss and translucence, monitoring through visual colorimeter, tri-stimulus colorimeters and reflectance spectrophotometer, CIE, Hunter- Lab, Munsel and other systems of three-dimensional expression of colour. Colour-based Sorting of foods, Computer Vision – Principles, applications and Benefits. | 9 |
| 4 | Monitoring and control of food structure Application of Thermal Analysis - Pulse Nuclear Magnetic Resonance (PNMR) spectroscopy in determination of solid-fat content (SFC) – Glass transitions in dairy products, Starch gelatinization Elucidation of crystal characteristics of milk fat in ghee and other fat-rich products by means of X ray Crystallography with reference to the impact of cooling and storage/handling conditions on the crystal nature and product texture – structure texture relationship, Emerging techniques in monitoring and control Raman Spectroscopy and ElectronSpin Spectroscopy – Working principles and applications - Monitoring of irradiated foods, detection of lipid auto- oxidation. Microwave & NIR absorption/reflection methods for Compositional analyses – Automated milk analysers; Proximate principles in cheese and milk powder                                                                                                                                                                  | 9 |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                    | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Understand and Apply Principles of Product Monitoring and Process Control in Food Industries                                       | K2                                 |
| <b>CO2</b>     | Describe the construction, types, and working principles of biosensors and their specific applications in food quality assessment. | K2                                 |
| <b>CO3</b>     | Illustrate techniques for Monitoring and Control of Flavour and Colour in Food Products                                            | K2                                 |
| <b>CO4</b>     | Explain advanced Techniques for Monitoring and Control of Food Structure and Composition                                           | K2                                 |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

## SEMESTER S7

### POST HARVEST SPOILAGE & PHYSIOLOGY OF FOODS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT754</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To identify the physiology changes and their reasons occurring after fruit and vegetable harvest
2. To study the methods for quality improvement of post-harvest produce

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction: Basic post- harvest physiology, definition, scope and importance in food production, respiration and gas exchange, Effect of respiration on physiology, factors affecting respiration, Respiration control methods, Changes during post- harvest, physical and chemical changes, transpiration, water stress. Different methods to determining maturity. Maturity indices for different cereals, pulses, oil seeds, fruits and vegetables. Ripening: Process of ripening, changes during ripening of fruits. Senescence: Physiological changes during senescence control of senescence and significance. Abscission: process of abscission, Factors affecting senescence and abscission of plant parts. | <b>9</b>             |
| <b>2</b>          | Factors affecting post-harvest physiology: Pre-harvest factors on post-harvest life, harvesting and handling injuries, storage conditions; temperature, RH, composition and its modification, Ethylene, Role of ethylene in ripening, Climacteric and non-climacteric fruits, ethylene biosynthesis, ethylene generators, ethylene control methods. Handling and storage: Maturity indices, Assessment of crop maturity, Changes during                                                                                                                                                                                                                                                                               | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                   |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | ripening, physical and chemical changes, change in colour, texture, flavour during storage, Harvesting methods, Storage conditions and types, Storage characteristics of different fruits and vegetables, MAP and CAP.                                                                                            |          |
| <b>3</b> | Factors involved with spoilage: Biotic and abiotic factors, temperature, insect infestation, microbes-fungi, virus, bacteria etc., mechanical damage, and chilling injury, freezing injury, quality and safety factors.                                                                                           | <b>9</b> |
| <b>4</b> | Quality Improvement techniques: Harvesting and handling techniques, coatings and treatments, insect control and microbial control, Post- harvest treatments, GAP, GHP, GMP, HACCP, measurement of product quality methods, destructive and non- destructive tests, physical chemical, biological, visual methods. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                      | Bloom's Knowledge Level (KL) |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Identify the physiological and biochemical changes in horticultural produce after harvest and apply suitable control methods                         | <b>K2</b>                    |
| <b>CO2</b>     | Describe suitable ripening techniques for the development of safe and quality ripened products for the shelf-life extension of horticultural produce | <b>K3</b>                    |
| <b>CO3</b>     | Understand the various factors involved in spoilage and the techniques for its control                                                               | <b>K2</b>                    |
| <b>CO4</b>     | Develop the knowledge of quality control for the quality improvement of fruits and vegetables                                                        | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S7

### SNACK FOOD TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT756</b> | <b>CIE Marks</b>   | <b>40</b>      |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquaint students with the principle involved in the manufacture of commercial snack foods
2. To familiarize students with equipment of importance in the snack food industry

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Snack foods: Types, specifications, compositions, ingredients, formulations, processing, equipment, packaging, storage and quality testing<br>Snack food seasonings; Breakfast cereals, macaroni products and malts: Specifications, compositions, ingredients, formulations, processing, equipment, packaging, storage and quality testing. | <b>9</b>             |
| <b>2</b>          | Grain-based snacks- Technology for Whole Grains Snacks – roasted, toasted, puffed, popped, flaked, Technology for Coated Grain Snacks – salted, spiced, sweetened, Technology for Batter-Based and Dough-Based Products, Technology for Formulated Products – chips, wafers, papads, instant pre mixes                                       | <b>9</b>             |
| <b>3</b>          | Horticulture produce-based snacks- Technology for Fruit-Based Snacks, Technology for Vegetable-Based Snacks, Technology for Coated Nuts<br>Extruded snacks- Formulation and Processing Technology, Colouring and Flavouring, Packaging, Machinery and Equipment, Use, and Care                                                               | <b>9</b>             |
| <b>4</b>          | Pulse based snacks-technology and processing formulations, Instant Food Pre-Mixes, Shelf-Life and Quality Characteristics of Snack Foods, regulations and standards of snack foods, permitted additives in snack foods.                                                                                                                      | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                       | 40    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                                        | Part B                                                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                    | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | The student will gain an understanding of processing techniques used to make snack foods and snack food seasonings | <b>K2</b>                          |
| <b>CO2</b>     | Apply grain, dough and batter-based snack food formulations in real world                                          | <b>K3</b>                          |
| <b>CO3</b>     | Comprehend fruit & vegetable and extruded snack foods along with machinery and packaging requirements              | <b>K2</b>                          |
| <b>CO4</b>     | Analyse quality characteristics, shelf life and major regulations of snack foods                                   | <b>K4</b>                          |
| <b>CO5</b>     | The student will gain an understanding of processing techniques used to make snack foods and snack food seasonings | <b>K2</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**SEMESTER S7**  
**CONSUMER BEHAVIOR IN FOOD MARKETING**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT757</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

**Course Objectives:**

1. To explain various theories and models related to consumer behavior and apply these concepts specifically to food marketing scenarios.
2. To identify and analyze psychological and social influences that impact consumer decision-making in food consumption.
3. To use various market research methods to gather data and apply the findings to develop effective food marketing strategies.
4. To design and assess food marketing strategies informed by consumer behavior principles, ensuring that the strategies are effective and relevant.
5. To evaluate how current trends and technological innovations influence consumer behavior and marketing strategies in the food industry.

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Consumer Behaviour in Food Marketing: Definition and importance of consumer behaviour - Key theories and models of consumer behaviour - Consumer decision-making process - The role of food marketing in consumer behaviour - Trends and challenges in food marketing - Regulatory and ethical considerations | <b>9</b>             |
| <b>2</b>          | Consumer Behaviour Models and Theories: Theory of Planned Behaviour - Stimulus-Response Theory - Hedonic vs. utilitarian consumption - Cognitive Dissonance Theory - Elaboration Likelihood Model (ELM) - Expectancy-Value Theory - The impact of culture and subculture on food choices -                                    | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Social class and consumer behaviour - Family and household influence on food consumption                                                                                                                                                                                                                                                                                                                                                                                                                                |          |
| <b>3</b> | Market Research, Consumer Insights, Branding and Product Development: Qualitative vs. quantitative research methods - Surveys, focus groups, and observational studies - Demographic, psychographic, and behavioural segmentation - Identifying and analyzing target markets - Brand equity and brand loyalty - The role of branding in consumer perception - Consumer-driven product innovation - The role of sensory marketing in product development - Testing and refining food products based on consumer feedback | <b>9</b> |
| <b>4</b> | Consumer Behaviour Trends and Technology: Health and wellness trends affecting food choices- Sustainability and ethical consumption-Impact of convenience and ready-to-eat foods- Role of digital marketing in influencing food choices - Social media, influencer marketing, and e-commerce - Data privacy and consumer trust in digital platforms                                                                                                                                                                     | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| 5                 | 15                                  | 10                                              | 10                                                | 40           |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                          | Part B                                                                                                                                                                                                                                                                       | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 = 24marks)</b></p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand and apply key theories and models of consumer behaviour in the context of food marketing.         | <b>K2</b>                    |
| <b>CO2</b>     | Analyze the psychological and social factors influencing consumer choices and behaviours in the food sector. | <b>K3</b>                    |
| <b>CO3</b>     | Conduct market research and apply insights to food marketing strategies.                                     | <b>K3</b>                    |
| <b>CO4</b>     | Develop and evaluate food marketing strategies based on consumer behaviour principles.                       | <b>K5</b>                    |
| <b>CO5</b>     | Assess emerging trends and technological advancements affecting consumer behaviour in food marketing.        | <b>K4</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**Course Objectives:**

1. Understand the fundamental concepts and importance of optimization in various fields
2. Develop practical skills to apply optimization techniques to solve real-world problems

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Module 1: Introduction to Optimization<br>Introduction to Optimization – Definitions – Historical development – Scope of optimization techniques. Classification of Optimization Problems – Linear and Non-linear – Static and Dynamic – Deterministic and Stochastic – Single and Multi-objective. Formulation of Optimization Problems – Objective function – Constraints – Decision variables.                                                          | <b>9</b>             |
| <b>2</b>          | Module 2: Classical Optimization Techniques<br>Single Variable Optimization – Optimality criteria – Unconstrained optimization – Constrained optimization using Lagrange multipliers and Kuhn-Tucker conditions. Multi-variable Optimization – Direct search methods – Gradient-based methods – Newton’s method – Conjugate gradient method. Linear Programming – Formulation – Graphical method – Simplex method – Duality theory – Sensitivity analysis. | <b>9</b>             |
| <b>3</b>          | Module 3: Numerical Methods and Algorithms<br>Numerical Optimization Techniques – Introduction to numerical methods – Numerical differentiation and integration. Gradient Descent – Steepest                                                                                                                                                                                                                                                               | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                    |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | descent method – Conjugate gradient method – Quasi-Newton methods.<br>Non-linear Programming – Penalty function methods – Barrier methods –<br>Sequential quadratic programming – Interior point methods.                                                                                                                                                                                          |          |
| <b>4</b> | Module 4: Advanced Optimization Techniques<br>Dynamic Programming – Principle of optimality – Recursive equations –<br>Applications. Genetic Algorithms – Basics of genetic algorithms – Operators<br>– Selection, crossover, mutation – Applications. Simulated Annealing –<br>Principles – Algorithm – Applications. Particle Swarm Optimization – Basic<br>concepts – Algorithm – Applications. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Understand the fundamentals of optimization, including various types and formulations of optimization problems.                                                          | <b>K2</b>                    |
| <b>CO2</b>     | Apply classical optimization techniques to both single and multi-variable problems, utilizing methods such as the simplex method and Lagrange multipliers.               | <b>K3</b>                    |
| <b>CO3</b>     | Implement numerical methods and algorithms for solving complex optimization problems, including gradient descent and interior point methods.                             | <b>K4</b>                    |
| <b>CO4</b>     | Utilize advanced optimization techniques like dynamic programming, genetic algorithms, simulated annealing, and particle swarm optimization for real-world applications. | <b>K5</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S7

### RESEARCH METHODOLOGY AND STATISTICS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT755</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 5/3             | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Explain the basic concepts of research.
2. Identify various sources of information for literature review and data collection
3. Understand various research designs and techniques of data analysis, writing and evaluate its quality
4. Appreciate the components of scholarly
5. Develop an understanding of the ethical dimensions of conducting research.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Research methodology- Understanding the language of research Concepts, constructs, operational definitions, variables, propositions, hypotheses, theories, and models Research process- Literature review -Types of research- Problem identification and formulation Research question Research hypothesis - Measurement issues Methods of data collection Types of data- Primary data Scales of measurement- Sources and collection of data Observation method Interview method- Survey- Experiments- Secondary data- Research design- Qualitative and Quantitative Research. | <b>9</b>             |
| <b>2</b>          | Processing and analysis of data- Sampling- Steps and characteristics of sampling design Sampling: concepts of Population, Sample, Sampling Frame, Sample size and its determination Types of sampling distributions                                                                                                                                                                                                                                                                                                                                                            | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Sampling error Statistics in research Descriptive statistics and inferential statistics- Measures of central tendency, dispersion, skewness, asymmetry- Measures of relationship- Correlation and regression- Simple regression analysis- Multiple regression Hypothesis Testing - parametric and non-parametric tests- Analysis of single factor experiments.                                                                                   |          |
| <b>3</b> | Reporting and presenting research Written and oral communications - Hallmark of great scientific writing - The reading toolkit - Pre-writing considerations - Format of dissertations, research reports, and research papers - Paper title and keywords - Writing an abstract - Writing the different sections of a paper Revising a paper Responding to peer reviews Reviewing research papers Plagiarism, Conference and poster presentations. | <b>9</b> |
| <b>4</b> | Language aspects of report writing -Verb, tense and voice in scientific writing - Errors in grammar - Sentence and paragraph constructions- Paraphrasing tools and online platforms - Measures of research impact.Referencing Management Software (Mendeley, Zoteroetc) - Intellectual property rights - Copyright - Patents - The codes of ethics - Avoiding the problems of biased survey -Occupational health and safety.                     | <b>9</b> |

**Course Assessment Method  
(CIE: 40 marks, ESE: 60 marks)**

**Continuous Internal Evaluation Marks (CIE):**

| <i>Attendance</i> | <i>Internal Ex</i> | <i>Evaluate</i> | <i>Analyse</i> | <i>Total</i> |
|-------------------|--------------------|-----------------|----------------|--------------|
| <b>5</b>          | <b>15</b>          | <b>10</b>       | <b>10</b>      | <b>40</b>    |

**Criteria for Evaluation (Evaluate and Analyse): 20 marks**

**1. Problem Definition (2 points)**

- Check for clarity and completeness of the problem definition.
- Check for clear objectives and divide into sub objectives

**2. Problem Analysis (4 points)**

- Examine the problem and identify the variables and responses
- Divide the problem to manageable parts

**3. Implementation of software (2 points)**

- Use suitable software for getting the solution

- Check for the appropriateness of tools used

#### 4. Evaluate (4 points)

- Evaluate the proposed solution.
- Assess the correctness of solution.

#### 5. Validation of the results (4 points)

- Validate the results using available data.
- Do the error analysis of the results obtained.

#### 6. Conclusion and presentation (4 points)

- Summarize the results obtained
- Do critical thinking of the results obtained and evaluate.
- Submit a technical report

### End Semester Examination Marks (ESE):

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                | Part B                                                                                                                                                                                                                                                                               | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• 2 questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> <li>• Each question carries 9 marks.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                          | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Comprehensive Understanding of Research Methodology      | <b>K2</b>                    |
| <b>CO2</b>     | Proficiency in Literature Review and Problem Formulation | <b>K1,K3</b>                 |
| <b>CO3</b>     | Expertise in Data Collection and Analysis Methods        | <b>K3,K4,K5</b>              |
| <b>CO4</b>     | Effective Research Communication                         | <b>K3</b>                    |
| <b>CO5</b>     | Ethics and Intellectual Property Awareness               | <b>K3,K4</b>                 |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   | 2   | 2   |     |     |     |     |     |      |      | 3    |
| <b>CO2</b> | 3   | 2   |     | 2   |     |     |     |     |     |      |      | 3    |
| <b>CO3</b> | 3   | 2   |     |     | 1   |     |     |     |     |      |      | 3    |
| <b>CO4</b> | 3   |     |     |     |     |     |     |     |     | 3    |      | 3    |
| <b>CO5</b> | 3   |     |     |     |     |     |     | 3   |     |      |      | 3    |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

| <b>Text Books</b> |                                                 |                                   |                                                       |                              |

## SEMESTER S7

### FOOD ENGINEERING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT721</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To study the fundamental theories behind general process involved in commercial processing of food and major equipment types used for each process
2. To design the process parameters for thermal processing, freezing, evaporation, dehydration, separation, extraction
3. To develop skills in formulating solutions to solve problems in food industry

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Perishable, semi perishable and non-perishable foods; Non refrigerated, refrigerated transportation Precooling – room cooling, forced air cooling, package icing, hydro cooling, vacuum cooling, evaporative cooling; Storage in bins, silos, bag storage, warehouses, Cleaning of raw materials – Dry cleaning and wet cleaning; Pre-treatment – blanching, sulphur dioxide dipping; Sorting and grading according to size, shape, weight, colour Peeling - Flash steam peeling, knife peeling, abrasion peeling, caustic peeling, flame peeling Size reduction - Energy consumption laws- Rittinger's law, Kick's law, Bond's law; Size reduction equipments for solids – Impact mills, pressure mills, attrition mills, cutters, choppers, shredders, pulpers; Size reduction liquid foods - Homogenization, homogenizers. | <b>9</b>             |
| <b>2</b>          | Batch and continuous sterilization processes (including steps and various machineries involved) used in canning of foods; Commercial sterilization, Constructional and operational features of pasteurizer; homogenizer;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Constructional features and principles of single effect evaporators (including mass and energy balances) used for concentration of liquid foods.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
| <b>3</b> | Constructional features of cold storage and basic design approach; Different types of freezers including plate contact freezer, air blast freezer; Cryogenic freezing; Refrigerated mobile vans. Theory of drying and mechanism of moisture transfer in drying; Drying kinetics and constant & falling rate periods in drying; Constructional & operational features of various types of cross-flow, through flow and recirculatory dryers – Tray dryer, roller dryer, drum dryer, spray dryer, fluidized bed dryer, freeze dryer and solar dryer, rotary dryer, tunnel dryer, other grain dryers (LSU-type). | <b>9</b> |
| <b>4</b> | Heat exchangers (Co-current and counter-current heat exchanger); Constructional features of various types of heat exchangers – DPHE, Shell& tube heat exchanger, Plate heat exchanger, extended surface heat exchangers; Theory and operation of extrusion systems used in food industry; Cold extrusion and Extrusion cooking systems; Single and twin-screw extruders – constructional and operational features including advantages/disadvantages with case studies.                                                                                                                                       | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                  | Part B                                                                                                                                                                                                                                                                | Total     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p>(4x9 = 36 marks)</p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                         | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Explain the mechanism of transportation, storage, cleaning, peeling and size reduction of food materials                | K2                           |
| CO2            | Summarize the food processing techniques of thermal processing, eg, sterilization, evaporation, separation, extraction. | K2                           |
| CO3            | Explain the knowledge of different freezers and dryers                                                                  | K2                           |
| CO4            | Explain basic principles of different types of heat exchangers and extruders                                            | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   |     |     |     |     |     |     |     |     |      |      | 3    |
| CO2 | 3   | 3   | 3   |     | 3   |     |     |     |     |      |      | 3    |
| CO3 | 3   |     |     |     | 3   |     |     |     |     |      |      | 3    |
| CO4 | 3   |     |     |     | 3   |     |     |     |     |      |      | 3    |

| <b>Text Books</b> |                                          |                                  |                              |                               |

## SEMESTER S7

### FOOD PROCESS AND EQUIPMENT DESIGN

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT722</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To acquire basic understanding of design parameters and knowledge of design procedures for commonly used food processing equipment

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction and Design of vessels: Nature of equipment, general design procedure, equipment classification. Properties of materials -Types of stresses and strains - Poisson's ratio- Hooke's Law – stress strain diagram- factor of safety, Materials of construction, Corrosion<br>Pressure vessel- design of cylindrical and spherical shell subject to internal and external pressure, Silo design- Rankine Theory-Airy equation-Janssen equation | <b>9</b>             |
| <b>2</b>          | Design of heat exchangers, evaporators and dryers: Design of heat exchangers –Double pipe heat exchangers, plate heat exchanger, shell and tube heat exchangers, design of evaporators-mass and energy balance-single effect and multiple effect evaporators, Design of dryers-mass and energy balance, Psychrometrics-drying time calculation.                                                                                                        | <b>9</b>             |
| <b>3</b>          | Design of supplemental processes: Design of food extruders – power requirements, Design of cold storage – factors to be considered –estimation of cooling load – construction and operation. Design of Agitation Vessels-power requirements, Design of centrifugal separator- rate of separation,                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | Design of Material handling, Cleaning and Separation devices: Material Handling devices-Design -belt conveyor, bucket elevator, screw conveyor, chain conveyor,pneumatic conveyor. Cleaning and grading-screens-effectiveness of screen-Air screen cleaners - design considerations, Disc separator-Spiral Separator-Specific gravity Separator, Pneumatic Separator-Inclined draper-Velvet roll Separator, Design of Cyclone separator-Magnetic Separator -Colour Separator | <b>9</b> |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Summarize the basics concepts related to design of equipments                                       | <b>K2</b>                    |
| <b>CO2</b>     | Select the design parameters of heat exchangers, evaporators and dryers                             | <b>K3</b>                    |
| <b>CO3</b>     | Choose the design parameters of extruders, cold storage, agitation vessel and centrifugal separator | <b>K3</b>                    |
| <b>CO4</b>     | Explain the design considerations of cleaning, separation and material handling devices             | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S7

### FOOD LAWS AND LEGISLATION

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT723</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide a general overview of food laws and regulations
2. To assist students in finding sources of information pertaining to food laws and regulations

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction: Concept of food safety, food security and nutrition security, Indian food regulatory regime (existing & old), FSSAI, PFA Act and Rules, food licensing and registration system, AGMARK, Legal metrology act 2009, Export (Quality Control and Inspection) Amendment Act, 1984, Voluntary Standards and Certification, BIS, food licensing and registration system, food import clearance system, essential commodity act, 1995.                                     | <b>9</b>             |
| <b>2</b>          | Food hazard contamination-biological (bacteria, viruses and parasites), chemical (toxic constituents / hazardous materials) pesticides residues / environmental pollution / chemicals) and physical factors, Risk assessment studies: risk management, risk characterisation and communication, concept and implementation of HACCP in food premises, use of permitted additives like colours, preservatives, emulsifiers, stabilisers, antioxidants, etc. and their regulations. | <b>9</b>             |
| <b>3</b>          | Regulations of nutrition labelling, nutrient level claims, and health claims, Regulations of standard of identity and quality, Introduction to the Food, Drug, and Cosmetic Act, Introduction to OIE & IPPC, Other International                                                                                                                                                                                                                                                  | <b>9</b>             |

|          |                                                                                                                                                                                                                                             |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Food Standards (e.g. European Commission, USFDA etc), Introduction to WTO Agreements: SPS and TBT Agreement, Export & Import Laws and Regulations, WHO/FAO Expert Bodies (JECFA/JEMRA/JMPR)                                                 |          |
| <b>4</b> | Voluntary quality standards and certifications-GMP, GHP, GAP, Good Animal Husbandry Practices, ISO 9000, ISO 22000, ISO 14000, ISO 17025, PAS 22000, FSSC 22000, BRC, Halal & Kosher standards, concept of six sigma, TQC, NABL, NABH, NBQP | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                           | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the basic concept of food laws and regulations and major regulatory bodies in India               | <b>K2</b>                    |
| <b>CO2</b>     | Apply the concept of food contamination, risk assessment and HACCP application in food                    | <b>K3</b>                    |
| <b>CO3</b>     | Summarize regulations related to labelling and various international food safety standards and agreements | <b>K2</b>                    |
| <b>CO4</b>     | Analyse sanitary regulations and ISO specifications                                                       | <b>K4</b>                    |
| <b>CO5</b>     | Explain the basic concept of food laws and regulations and major regulatory bodies in India               | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Human Resource Development (HRD) Concept. Decision Making: Leadership Traits. Organizational Conflict: Positive Aspects, Individual Role, Interpersonal, Intra Group, Inter Group Conflict Management, Guidelines to managing Conflict.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |
| <b>3</b> | Finance: Assessing, acquiring and allocating funds, cash flow statement- balance sheet, financial ratio, break even analysis, concept, application in food industry, project appraisal, techno- economic feasibility report on an identified opportunity - any food processing; bakery and confectionary , fruit and vegetable processing, oil and fat ,milk and milk products etc. Market management: concepts- consumer market, business market, marketing environment- market segmentation- market measurement and forecasting- advertisement - publicity market information system- market researchmanagement of distribution channel, Consumer buying behaviour, factors influencing consumer buying behaviour. Export trade- Government regulations, GAIT, WTO regulation. | <b>9</b> |
| <b>4</b> | Productivity: Concept; Measurements; Affecting Factors; Methods to Improve – Modern Topics (concept, feature/characteristics, procedure, merits and demerits): Business Process Reengineering (BPR); Benchmarking; SWOT/SWOC Analysis; Total Productive Maintenance; Enterprise Resource Planning (ERP); Management of Information Systems (MIS).                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                             | Part B                                                                                                                                                                                                                                                                             | Total     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 3 marks</li></ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"><li>• Each question carries 9 marks.</li><li>• Two questions will be given from each module, out of which 1 question should be answered.</li><li>• Each question can have a maximum of 3 sub divisions.</li></ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                               | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Summarize the basic concept of management                                                                                                     | K2                           |
| CO2            | Explain appropriate requirement of planning, organizing, controlling and decision making functions of management in professional organization | K2                           |
| CO3            | Explain the function of financial, marketing management techniques                                                                            | K2                           |
| CO4            | Develop the principle of productivity and modern concepts in management in professional organization                                          | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S7

### CONSUMER AND CONVENIENCE FOODS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT725</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3-0-0-0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

- 1.To gain knowledge on convenience foods
- 2.To acquire knowledge on food processing techniques

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Food product development –Development of new product, need for developing new products, Developing marketing strategy for new product, Strategies in product development, success and failure factors for new products.                                                                                                                                                                                                                  | <b>9</b>             |
| <b>2</b>          | Snack foods: Snack foods Popped snacks – Popcorn –popping procedures, loss during popping, measurement of expansion, factors affecting quality of popcorn, storage. Puffed snacks – Puffable materials, extrusion methods ,drying, Addition of flavours and colours, Simulated popcorn. Baked snacks – Proportion and role of ingredients; Sweet based –plain cookies, wire cut cookies; Salt based – soda crackers and cheese crackers. | <b>9</b>             |
| <b>3</b>          | Convenience Foods For Defense Service: Convenience foods for defense services –IMF and Hurdle Technology-Principles. Processing of dehydrated vegetables, vegetable powder, IMF fruit slices, IMF fruit bars, fruit milk, soup powder. Foods designed by DRDO for defense services – list and principle of processing applied.                                                                                                           | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | Ready to eat and extruded foods foods: Ready to eat foods– principle of retort processing, technique, production, advantages and disadvantages. Ready to eat foods available in India. Marketing and future prospects. Extruded foods – Principle of extruders, Production of pasta- noodle and macaroni products, Common extruders used in food industry, Merits and demerits of extruder technology, Uses of extruded foods, Factors affecting extrusion performance. | <b>9</b> |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| 5                 | 15                                  | 10                                              | 10                                               | 40           |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Summarize the concept of preparing convenience foods.                          | <b>K2</b>                    |
| <b>CO2</b>     | Explain the knowledge in production of high nutritive value convenience foods. | <b>K2</b>                    |
| <b>CO3</b>     | Identify the quality of the foods.                                             | <b>K3</b>                    |
| <b>CO4</b>     | Identify the shelf life and acceptability of the foods among the consumers.    | <b>K3</b>                    |
| <b>CO5</b>     | Select new products imbued with probiotics, prebiotics and antioxidants.       | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 2   |     |     |     |     | 1   |     |     |     |      |      | 3    |
| <b>CO2</b> |     |     | 2   |     |     |     | 3   |     |     |      |      |      |
| <b>CO3</b> | 2   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> |     | 3   | 3   |     | 3   | 3   |     |     |     |      |      |      |
| <b>CO5</b> | 3   |     |     |     | 3   | 3   | 2   |     |     |      |      |      |

| Text Books |                                                                          |                                               |                       |                                  |

## SEMESTER S7

### BIOPROCESS ENGINEERING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT726</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the basic principles of various biochemical processes and realize the importance of different design parameters in bioreactor operation

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | A historical overview of industrial fermentation process – traditional and modern biotechnology - industrially useful microorganisms . Process flow sheeting – block diagrams with industrial pictorial representation for various equipments, Isolation, preservation and improvement of industrial microorganisms for overproduction of primary and secondary metabolites, medium requirements for fermentation process, Basic design of the fermenter             | <b>9</b>             |
| <b>2</b>          | Production and purification of primary metabolites: Industrial processes for the manufacture of the following products: Organic acids-citric acid, lactic acid itaconic acid and acetic acid, Production of amino acids - commercially important amino acids; alcohols: ethanol, acetone                                                                                                                                                                             | <b>9</b>             |
| <b>3</b>          | Production of secondary metabolites: - Industrial production processes for various classes of secondary metabolites: antibiotics: beta-lactams- penicillin and cephalosporin, aminoglycosidesstreptomycin, quinines, commercially important vitamins and steroids. Production and purification of enzymes and other by-products: Microbial production of industrial enzymes: proteases, amylases, lipases and cellulases, Production of biofertilizers- manufacture, | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | formulation and utilization, biopesticides:-Important biopesticides- Bt-toxin, Kasugamycin, Beauverin, Devine.                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |
| <b>4</b> | Biopreservatives, biopolymers- Xanthan gum and PHB, Beverages:- production of beverages, production of baker's yeast. Bioremediation- microbes in mining, ore leaching, oil recovery, waste water treatment, biodegradation of non cellulose and cellulosic wastes for environmental conservation, production of vaccines, production of monoclonal antibodies. Extraction and preparation of crude enzymes, purification and characterization of enzymes from plant, application of enzymes in industry, analytical purposes and medical therapy | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                        | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain industrial fermentation and design of industrial fermenter                                                                     | <b>K2</b>                    |
| <b>CO2</b>     | Explain primary and secondary metabolites                                                                                              | <b>K2</b>                    |
| <b>CO3</b>     | Explain the process technologies for commercial production of products by identifying engineering problems associated with bioreactors | <b>K2</b>                    |
| <b>CO4</b>     | Summarize the application of enzymes in industries and to explain the role of microorganisms in bioremediation and biopesticides       | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

## SEMESTER S7

### FERMENTATION & ENZYME TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT727</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To study fundamentals of enzyme structure, functions, kinetics of soluble and immobilized enzymes
2. To learn about various designs of fermenter and fermentation processes.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | INTRODUCTION TO ENZYMES: Classification of enzymes, Mechanisms of enzyme action; concept of active site and energetics of enzyme-substrate complex formation; specificity of enzyme action; principles of catalysis – collision theory, transition state theory, Coenzymes and Cofactors- Prosthetic group, coenzymes involved in different metabolic pathways. Classification of coenzymes. Isozymes, Abzymes, Synzyme. Kinetics of single substrate reactions; estimation of Michaelis- Menten parameters, multisubstrate reaction mechanisms and kinetics     | <b>9</b>             |
| <b>2</b>          | ENZYME IMMOBILIZATION & APPLIED ENZYMOLOGY: Enzyme inhibition - types of inhibitors - competitive, non-competitive and uncompetitive, their mode of action, turnover number; ph and temperature effect on enzymes. Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, advantages and disadvantages. Industrial Enzymes- Thermophilic enzymes, amylases, lipases, proteolytic enzymes in meat industry, enzymes used in various fermentation processes. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | INTRODUCTION TO FERMENTATION PROCESSES: Text Books: General requirements and Microbial culture selection for fermentation processes, Media formulation, inoculum development and process optimization- medium composition, energy, CO <sub>2</sub> , nitrogen and other growth factors, buffering and foam agents. Types of fermentation- ethanolic fermentation – mixed alcoholic and acid fermentation – lactic acid fermentation.                               | <b>9</b> |
| <b>4</b> | OVERVIEW OF FERMENTATION TECHNOLOGY & INDUSTRIAL IMPORTANCE: Design of fermenter - types of fermenters -different parts- agitator, impellers, aerator, baffles, mode of configurations, process control, functions of various parts of fermenter. Recovery and purifications of food products. Selection of industrially important microorganisms; Fermentation in foods; application in baking, sauces, sauerkraut, sausages, pickle, beer and wine fermentation. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                | Part B                                                                                                                                                                                                                                                                                 | Total            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <p><b>60</b></p> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                          | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------|------------------------------|
| C01            | Explain the classification of enzymes and their mechanism of action                                      | K2                           |
| C02            | Develop kinetics of enzyme catalysed reactions, enzyme inhibitory and regulatory process.                | K3                           |
| C03            | Outline different types of enzyme immobilization and applications of enzymes and their future potential. | K2                           |
| C04            | Summarize the design, parts of fermenters and its applications in various food industries.               | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

# **SEMESTER 8**

## **FOOD TECHNOLOGY**

## SEMESTER S8

### FOOD PLANT LAYOUT AND DESIGN

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT861</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To develop the knowledge of plant design and layout of specific food industries
2. To enable the students to learn about the regulations governing food plant design
3. To enable the students to learn how to scale up plant designs

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Basic concepts of plant layout and design including a basic understanding of equipment layout, ventilation; Design consideration for the location of food plants. The material of Construction for food processing equipment; Specifications of processing equipment and accessories; provision for waste disposal, and safety arrangements aspects of plant layout and design; Symbols used for food plant design and layout | <b>9</b>             |
| <b>2</b>          | Introduction to feasibility study and analysis Layout and design aspects of pilot and semi-commercial food processing plants; Reference to the design of bakery and biscuit, fruits, vegetable, and beverage processing, and dairy industries; Hygienic Design of Food Plants; specific FSSAI requirements in food plant layout and design                                                                                    | <b>9</b>             |
| <b>3</b>          | Application of Program Evaluation and Review Technique (PERT) and Critical Path Method (CPM) in project planning and monitoring; application of ISO, HACCP in food plant, Experimentation in Pilot Plant                                                                                                                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | Introduction to project engineering; Process design development: Optimum economic design, Feasibility Survey; Preparation of flow sheets for material movement and utility consumption in food plants; Cost estimation for a Food Plant; Scale-up, Food processing enterprise, Plant operation | <b>9</b> |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written ) | Total     |
|------------|-----------------------------|----------------------------------------|------------------------------------------|-----------|
| <b>5</b>   | <b>15</b>                   | <b>10</b>                              | <b>10</b>                                | <b>40</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                           | Part B                                                                                                                                                                                                                                                                                          | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p align="center"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p align="center"><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                               | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Explain the concept and different aspect required for food plant design                                       | <b>K2</b>                          |
| <b>CO2</b>     | Select appropriate requirement of design and layout for the specific food industry with compliance with FSSAI | <b>K3</b>                          |
| <b>CO3</b>     | Illustrate the function of PERT, CPM, ISO and HACCP in food plant design                                      | <b>K2</b>                          |
| <b>CO4</b>     | Develop a food plant layout with taken into account different legal, economic, social aspects                 | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S8

### ENTREPRENEURSHIP DEVELOPMENT IN FOOD TECHNOLOGY

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT862</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Acquire knowledge in Entrepreneurship Development
2. Able to study and prepare the business plan for any organization
3. Classify and study the organizational structure between small, medium, and large scale manufacturing industries

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |

## SEMESTER S8

### NUTRACEUTICALS AND FUNCTIONAL FOODS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT863</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the historical development, definitions, and classifications of nutraceuticals and functional foods.
2. To analyze the role of bioavailability and synergy of functional components in managing diseases such as cardiovascular diseases, diabetes, cancer, hypertension, and obesity.
3. To evaluate different food sources and their benefits as functional foods.
4. To examine the marketing strategies, ethical considerations, and consumer behaviour related to functional foods and nutraceuticals.
5. To familiarize and compare the regulatory frameworks and guidelines for functional foods and nutraceuticals.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to nutraceuticals and functional foods, historical perspective of nutraceuticals, definition, nature, nutraceutical compounds, applications, classification based on chemical/biochemical nature with descriptions, scope and future prospects, Overview of functional foods, definition, classification functional food science and food technology, Impact of food technology on functional food development, Key issues in the Indian functional food industry and nutraceuticals. | <b>9</b>             |
| <b>2</b>          | Bioavailability and synergy of functional components in food matrices, antioxidants and disease management, concept of free radicals and antioxidants, role of antioxidants as nutraceuticals and functional foods, disease management, management of cardiovascular diseases, diabetes,                                                                                                                                                                                                           | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | cancer, hypertension, and obesity by nutraceutical compounds, mechanisms of action of these compounds.                                                                                                                                                                                                                                                                                                                                                                                                                     |          |
| <b>3</b> | Food sources and their benefits, different foods as functional foods, cereal products (oats, wheat bran, rice bran, etc.) fruits and vegetables, milk and milk products, legumes, nuts, oil seeds, and sea foods, herbs, spices, and medicinal plants, coffee, tea, and other beverages as functional foods/drinks and their protective effects, Organosulphur Compounds, pigments: Carotenoids, Lycopene, curcumin, Non nutrient effect of specific nutrients: proteins and peptides and nucleotides, vitamins, minerals. | <b>9</b> |
| <b>4</b> | Marketing and regulatory issues for functional foods and nutraceuticals, CODEX guidelines, EU guidelines, FSSAI guidelines, regulations for nutraceuticals and functional foods, recent updates and amendments, comparative analysis of global regulatory frameworks, challenges in regulatory compliance and future directions.                                                                                                                                                                                           | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                    | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                     | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the historical context, definitions, nature, and classifications of nutraceuticals and functional foods.                    | <b>K2</b>                    |
| <b>CO2</b>     | Explain the mechanisms by which antioxidants and nutraceutical compounds manage diseases.                                           | <b>K2</b>                    |
| <b>CO3</b>     | Identify various functional foods and assess their health benefits.                                                                 | <b>K2</b>                    |
| <b>CO4</b>     | Develop insights into marketing strategies, ethical issues, and consumer behaviours related to functional foods and nutraceuticals. | <b>K3</b>                    |
| <b>CO5</b>     | Compare global regulatory guidelines for functional foods and nutraceuticals.                                                       | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

**SEMESTER S8**  
**AUTOMATION IN FOOD INDUSTRY**

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT864</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

**Course Objectives:**

1. Understand the role and importance of automation in the food industry
2. Identify different areas where automation can be applied in food processing and production

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Module 1: Introduction to Automation in the Food Industry<br>Overview of Automation – Definition and scope of automation – History and evolution of automation in the food industry – Types of Automation Systems – Hard and soft automation – Fixed and flexible automation – Benefits and Challenges – Advantages of automation in food production – Common challenges and limitations – Applications of Automation – Case studies and examples of automated systems in food processing – Ethical and Social Considerations – Impact of automation on workforce and society | <b>9</b>             |
| <b>2</b>          | Module 2: Automation Technologies and Tools<br>Sensors and Actuators – Types of sensors used in food industry automation – Actuators and their role in automation – Control Systems – Introduction to PLC (Programmable Logic Controllers) – SCADA (Supervisory Control and Data Acquisition) systems – Robotics in Food Processing – Types of robots used in the food industry – Applications of robotics in food packaging and handling – Computer Vision Systems – Basics of computer vision – Applications in quality control and inspection – Emerging Technologies – AI | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | and machine learning in food automation – Internet of Things (IoT) in food processing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |
| <b>3</b> | <p>Module 3: Design and Implementation of Automated Systems</p> <p>System Design Principles – Key considerations in designing automated systems – Integration of various components – Automation Project Management – Planning and execution of automation projects – Cost-benefit analysis – Case Studies – Analysis of successful automation projects in the food industry – Safety and Compliance – Safety standards and regulations – Ensuring compliance with food safety standards – Maintenance and Troubleshooting – Strategies for maintaining automated systems – Common troubleshooting techniques</p> | <b>9</b> |
| <b>4</b> | <p>Module 4: Future Trends and Innovations in Food Industry Automation</p> <p>Sustainable Automation – Green automation technologies – Energy-efficient systems – Advanced Robotics – Collaborative robots (cobots) – Autonomous systems – Smart Manufacturing – Industry 4.0 and its impact on the food industry – Smart factories and digital twins – Predictive Maintenance – Use of predictive analytics in maintenance – Benefits and implementation strategies – Research and Development – Current trends in R&amp;D – Potential future innovations in food automation</p>                                 | <b>9</b> |

## SEMESTER S8

### APPLICATIONS OF RENEWABLE ENERGY IN FOOD PROCESSING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT866</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

- To study fundamentals of enzyme structure, functions, kinetics of soluble and immobilized enzymes
- To learn about various designs of fermenter and fermentation processes

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Overview of Renewable Energy Sources Solar energy: principles, technologies (solar thermal, photovoltaic), applications in food processing. Wind energy: turbine technology, wind farms, integration with food processing operations. Biomass energy: types of biomasses, conversion technologies (combustion, gasification, anaerobic digestion), heating, electricity generation. Hydroelectric and geothermal energy: principles, utilization in food processing (heating, cooling, electricity). Environmental and Economic Benefits, Importance of renewable energy in sustainable food processing. Environmental impacts and benefits: reduction of carbon footprint, energy efficiency. Economic feasibility: cost-benefit analysis, return on investment (ROI), incentives and subsidies. | <b>9</b>             |
| <b>2</b>          | Solar Energy Applications in Food Processing: Solar Thermal Systems, Design considerations: collectors, storage systems. Applications in food processing: heating, drying, thermal processes. Case studies and examples of successful implementations. Solar Photovoltaic Systems PV technology:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | components, PV arrays, grid-tied vs off-grid systems. Integration with food processing facilities: electricity generation, energy management. Case studies and best practices.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |
| <b>3</b> | Biomass and Wind Energy Integration: Biomass Energy for Food Processing<br>Types of biomass feedstocks: agricultural residues, forestry waste, energy crops. Bioenergy conversion technologies: combustion, gasification, anaerobic digestion. Application in food processing: steam generation, combined heat and power (CHP), biogas production. Wind Energy Integration Wind turbine technology: types (horizontal axis, vertical axis), selection criteria. Wind farm design considerations: site assessment, grid connection, operational challenges. Case studies of wind energy applications in food processing.                                                                                                                                                                                                                               | <b>9</b> |
| <b>4</b> | Regulatory Framework and Policies: Introduction to Regulatory Landscape. Overview of national and international policies supporting renewable energy adoption in food processing. Key regulatory bodies and their roles: environmental agencies, energy ministries, regulatory commissions. Compliance Requirements. Permitting processes: environmental impact assessments (EIAs), licensing for renewable energy installations. Standards and codes: adherence to safety, efficiency, and environmental performance standards. Incentives and Financial Mechanisms. Government incentives: tax credits, grants, subsidies for renewable energy projects. Feed-in tariffs (FITs) and power purchase agreements (PPAs) for renewable energy generation. Case studies illustrating successful utilization of incentives in food processing industries. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                 | Part B                                                                                                                                                                                                                                                            | Total     |
|------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>1.</b> 2 Questions from each module.<br><b>2.</b> Total of 8 Questions, each carrying 3 marks<br><br>(8x3 =24marks) | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul><br>(4x9 = 36 marks) | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                           | Bloom's Knowledge Level (KL) |
|----------------|---------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the types of renewable energy systems                             | <b>K2</b>                    |
| <b>CO2</b>     | Summarize application of solar energy in food processing                  | <b>K2</b>                    |
| <b>CO3</b>     | Outline different types biomass and wind energy systems                   | <b>K2</b>                    |
| <b>CO4</b>     | Explain the regulatory framework and policies related to renewable energy | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S8

### BY PRODUCT UTILIZATION IN FOOD INDUSTRY

|                                            |                  |                    |                |
|--------------------------------------------|------------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT 867</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0          | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3                | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand different food industry wastes and recovery methods of beneficial components
2. To valorisation of food industry waste products and its utilisation

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | By-product Utilization from Cereals :Importance of by-product utilization - Different sources of wastes from food industries- Nature of different waste - Thermal and biotechnological uses of rice husk. Pyrolysis and gasification of rice husk - Cement preparation and different thermal applications - Utilisation of rice bran - stabilization - Defatted bran utilisation.By products of wheat milling - germs and bran - By products of pulse milling - husk - germs and broken. Extraction of rice bran - refining - uses of bran.                                      | <b>9</b>             |
| <b>2</b>          | Fruit Industry Waste Utilization: Different sources of wastes from fruit and vegetable industries, Status and types of waste available by products and utilization - mango - citrus - apple - guava - grape waste, Status and types of waste available by products and utilization - vinegar production, SCP production - organic acid production from vegetable waste - utilization of moringa - potato - leafy vegetable waste, Distillation for production of alcohol - oil extraction from waste - waste management in sugar mills, Citric acid production from fruit waste. | <b>9</b>             |
| <b>3</b>          | Fish, Meat and Poultry Waste Utilization: Fish industry by products and waste utilisation - fish by-products - production of fish meal, Fish protein                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | concentrate - fish protein hydrolysate fish liver oil and fish silage - Production of chitin – chitosan, Production of non-food items from fish processing wastes - meat and poultry waste recycling.                                                                                                                                                                                                                                                                                                                                         |          |
| <b>4</b> | Waste from tuber crops - effluent safe disposal - effluent treatment plant - waste recycling plant, Feasibility report for food industries using food waste and by products, Waste from Coconuts - uses of coir pith - biogas production - particle board - utilization of coconut husk - coir fibre, Coconut shell utilization - methods for production of shell charcoal, Fuel briquette - machineries used. Effluent safe disposal - effluent treatment plant Marks Waste water treatment - physical and chemical methods, Sludge disposal | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                           | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Identify and distinguish types of waste generated from food industries and find suitable application based on its properties.             | <b>K2</b>                    |
| <b>CO2</b>     | Identify the effective methods for energy recovery from waste products and thereby to improve economic efficiency.                        | <b>K2</b>                    |
| <b>CO3</b>     | Develop various value-added products from food industry waste                                                                             | <b>K3</b>                    |
| <b>CO4</b>     | Identify the control environmental impacts associated with food industry waste disposal by using appropriate waste management techniques. | <b>K3</b>                    |
| <b>CO5</b>     | Apply the principles of waste water recycling to restore water supply and to control pollution.                                           | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 2   |     |     |     |     | 1   |     |     |     |      |      |      |
| <b>CO2</b> |     |     | 2   |     |     |     | 3   |     |     |      |      |      |
| <b>CO3</b> | 2   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> |     | 3   | 3   |     | 3   | 3   |     |     |     |      |      |      |
| <b>CO5</b> | 3   |     |     |     | 3   | 3   | 2   |     |     |      |      |      |

| Text Books |                                                                           |                                      |                       |                                |

## SEMESTER S8

### HACCP PLANNING AND IMPLEMENTATION

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT868</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To develop the knowledge of students regarding hazard control and management principles, tools and their application
2. To enable the students to be aware of the voluntary and mandatory food standards and certifications in place- globally and nationally

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction: Food Safety; History of HACCP, HACCP Principles, HACCP Plan, Role of Pre requisite programmes (PRP), Operational Pre-REQUISITE Programmes (OPRP) and GMP in Food Industry, Documentation required for implementation of HACCP. HACCP levels, CP's, CCP Controls, Audit: First, second- & third-party audits, CAPA report. Comprehensive global perspective of HACCP (USA, Canada, UK, EU, Africa, Japan). HACCP as a part of ISO 22000/FSSC 22000 8.                              | <b>9</b>             |
| <b>2</b>          | Introduction to Food Processing, Food processing and its types, Microbial, Chemical, Physical Hazards, HACCP generic Model, Importance of Equipment/ Process Selection, Advantages in Implementing HACCP, Risks at different stages of Food Chain. HACCP Implementation in Storage and Transport, Retail and Distribution. Example of Implementation of HACCP in different Food Industry. Implementation of HACCP in a food industry/retail food establishment/catering industry. Case Studies. | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Food Plant Design, layout and Food Logistics, Food Packaging Technology and Labelling Food Microbiology, food borne illness and hazards, Food Sensory Evaluation, Entrepreneurship Development in Food Processing, Case studies, Quality Risk Assessment, Quality Risk Management: Ins and Outs, Deviation Management, CAPA, and Change control, Case Study.                                                                                                                                                                         | <b>9</b> |
| <b>4</b> | HACCP based approach towards Food Safety; Introduction of VACCP, TACCP, principles, contribution towards Food Preservation, Processing and Packaging, Food Processing Operations, Good Manufacturing Practices, principles including novel and emerging methods. Hazards Associated with bakery and dairy foods, production of safe bakery and dairy foods – Pre requisite programmes and HACCP, Risk assessment at different stages of bakery and dairy food process, Application of VACCP and TACCP system in Sea food Processing. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                                                      | <b>Total</b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                              | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the HACCP and its principles                                                                         | <b>K2</b>                    |
| <b>CO2</b>     | Make use of HACCP in food industries                                                                         | <b>K3</b>                    |
| <b>CO3</b>     | Summarize the overall protection and handling of food materials                                              | <b>K2</b>                    |
| <b>CO4</b>     | Develop HACCP plan in the Food Plant Design, layout, Food Logistics, Food Packaging Technology and Labelling | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     |     |     |     |     |      |      | 3    |
| <b>CO2</b> | 3   | 3   |     |     |     |     |     |     |     |      |      | 3    |
| <b>CO3</b> | 3   |     |     |     |     |     |     |     |     |      |      | 3    |
| <b>CO4</b> | 3   | 3   | 3   |     | 3   |     |     |     |     |      |      | 3    |

| Text Books |                                         |                              |                          |                  |
|------------|-----------------------------------------|------------------------------|--------------------------|------------------|

## SEMESTER S8

### AGRO-INDUSTRIAL PROJECT PLANNING AND MANAGEMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>PEFTT865</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 5/3             | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide insight to students and encouragement to become entrepreneur in food processing sector

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                 | <b>Contact Hours</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Production and Inventory Management<br>Introduction to Food and agri business Management- nature of processing industry, production, planning – Batch and continuous production, process planning, definition and concepts, inventory control- classification, economic ordering, inventory models, ABC Analysis                                                                            | 9                    |
| <b>2</b>          | Financial Management<br>Assessing, acquiring and allocating funds, cash flow statement- balance sheet, financial ratio, break even analysis, concept, application in food industry – project appraisal                                                                                                                                                                                      | 9                    |
| <b>3</b>          | Market Management<br>Concepts- consumer market, business market, marketing environment- market segmentation market measurement and forecasting- advertisement- publicity market information system market research-management of distribution channel, Consumer buying behaviour, factors influencing consumer buying behaviour. Export trade- Government regulations, GAIT, WTO regulation | 9                    |

|   |                                                                                                                                                                                                                                                                                                     |   |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| 4 | Business Plan Reports<br>Preparation of project report; Market feasibility reports; Break even Analysis<br>Techno- economic feasibility report on an identified opportunity-any food processing; bakery and confectionary , fruit and vegetable processing, oil and fat ,milk and milk products etc | 9 |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <i>Attendance</i> | <i>Internal Ex</i> | <i>Evaluate</i> | <i>Analyse</i> | <i>Total</i> |
|-------------------|--------------------|-----------------|----------------|--------------|
| 5                 | 15                 | 10              | 10             | 40           |

**Criteria for Evaluation (Evaluate and Analyse): 20 marks**

**1. Problem Definition (2 points)**

- Check for clarity and completeness of the problem definition.
- Check for clear objectives and divide into sub objectives

**2. Problem Analysis (4 points)**

- Examine the problem and identify the variables and responses
- Divide the problem to manageable parts

**3. Implementation of software (2 points)**

- Use suitable software for getting the solution
- Check for the appropriateness of tools used

**4. Evaluate (4 points)**

- Evaluate the proposed solution.
- Assess the correctness of solution.

**5. Validation of the results (4 points)**

- Validate the results using available data.
- Do the error analysis of the results obtained.

**6. Conclusion and presentation (4 points)**

- Summarize the results obtained
- Do critical thinking of the results obtained and evaluate.
- Submit a technical report

**End Semester Examination Marks (ESE):**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                     | Part B                                                                                                                                                                                                                                                                  | Total     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <b>(8x3 =24marks)</b> | <ul style="list-style-type: none"> <li>2 questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> <li>Each question carries 9 marks.</li> </ul> <b>(4x9 = 36 marks)</b> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                    | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain production and inventory management concepts                                                               | <b>K2</b>                    |
| <b>CO2</b>     | Explain financial and marketing management techniques                                                              | <b>K2</b>                    |
| <b>CO3</b>     | Illustrate about the market strategy, selection of market for product launching, consumer testing by market survey | <b>K2</b>                    |
| <b>CO4</b>     | Apply knowledge on project report preparation and its significance                                                 | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S8

### FUNDAMENTALS OF FOOD PROCESSING

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT831</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To understand the fundamental principles and concepts of food preservation and processing.
2. To introduce the role and significance of regulatory bodies in maintaining food standards, and emphasizes the essential principles of food safety and quality control.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to Food Basics</b><br>Food definition, Food constituents- Moisture, Carbohydrates, Proteins, Lipids, Vitamins and minerals, Food and its functions, Food groups, Major properties of food, Compositional and nutritional aspects- fruits and vegetables, dairy, cereals, pulses, oilseeds, fisheries, meat and poultry, consumer foods etc.    | <b>9</b>             |
| <b>2</b>          | <b>Food spoilage and preservation</b><br>Perishable, semi perishable and non-perishable foods, Food deterioration- types and causes, Major microbes causing food spoilage, Factors affecting microbial growth, Principles and methods of food preservation- preservation by low temperature, high temperature, preservatives, dehydration and food irradiation | <b>9</b>             |
| <b>3</b>          | <b>Food Processing</b><br>Need of Food processing, Primary, Secondary and tertiary processing, Processed food products types and method of preparation- cereals and pulses, extruded products, fruits and vegetables, minimally processed                                                                                                                      | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                              |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | products, dairy, flesh foods, confectionary and fermented products.<br>Status of food processing sector in India- fruits and vegetables, dairy, cereals, pulses, fisheries, meat and poultry, consumer foods, Major challenges and growth potential.                                                                                                                                                                         |          |
| <b>4</b> | <b>Food processing regulation bodies</b><br>The role of Codex alimentarius commission, FSSAI, MOFPI, KINFRA, BIS, APEDA, MPEDA and AGMARK, Mega food parks and packaging Centers, Role of food technologist in society.<br><b>Food Safety</b><br>Introduction to food safety and food quality importance, Quality attributes of food, factors affecting quality, Principles of HACCP, ISO 22000, TQM, GHP, GMP, SOP and SSOP | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                       | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Provide a comprehensive understanding of food definition, its constituents, the functions of food and food groups.    | <b>K1</b>                    |
| <b>CO2</b>     | Understand the types and causes of food deterioration, and identify the major microbes responsible for food spoilage. | <b>K3</b>                    |
| <b>CO3</b>     | Make use of the need for food processing and methods of preparation of processed food products.                       | <b>K3</b>                    |
| <b>CO4</b>     | Explore the roles of key regulatory bodies in ensuring food safety and standards                                      | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S8

### FOOD PLANT LAYOUT AND DESIGN

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT832</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To familiarize basic concepts of plant layout and design with special reference to food process industries
2. To select a location for the food industry and develop a plant layout using the systematic layout planning procedure

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Basics Concepts, Location and Layout of Food plant:</b> Basic concepts of plant layout and design with special reference to food process industries, manufacturing processes-types, Application of HACCP concept, ISO, FPO & MPO requirements in food plant layout and design.Plant location, location theory and models, Plant location factors-plant site selection, Economic plant size-plant layout objectives-classical and practical layout, Characteristics of an efficient layout. | <b>9</b>             |
| <b>2</b>          | <b>Plant layout procedure:</b> Preparation of flow sheets for material movement and utility consumption in food plants, SLP and its application in development of plant layout, computerised layout planning-types-application in development of plant layout                                                                                                                                                                                                                                 | <b>9</b>             |
| <b>3</b>          | <b>Food plant layout considerations:</b> Building planning, flooring and types, Basic understanding of equipment layout and ventilation in food process plants, miscellaneous aspects of plant layout and design like provision for packaging and labelling, waste disposal, safety arrangements, Development of general food plant layout and design.                                                                                                                                        | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                |          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>4</b> | <b>Development of food plant layout:</b> Plant layout and design of Baking oven and frying plant, chocolate and ice-cream plant, fruits and vegetables processing industries including beverages, milk and milk products, fat and oil processing, meat and poultry processing, | <b>9</b> |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal<br>Examination- 2<br>(Written) | Total     |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-----------|
| <b>5</b>   | <b>15</b>                   | <b>10</b>                              | <b>10</b>                               | <b>40</b> |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                                | Part B                                                                                                                                                                                                                                                                                 | Total     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                               | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Apply the design considerations and food safety standards in development of food plant layout types along with site selection | <b>K3</b>                          |
| <b>CO2</b>     | Apply the systematic layout planning in development of food plant layout.                                                     | <b>K3</b>                          |
| <b>CO3</b>     | Construct flow sheet for the material movement and utility consumption in food industry.                                      | <b>K3</b>                          |
| <b>CO4</b>     | Design and develop plant layout and plant design for food processing industries.                                              | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 2   | 2   |     |     | 2   |     |     |     |      |      |      |
| CO2 | 3   | 2   | 2   |     | 2   |     |     |     |     | 2    | 2    |      |
| CO3 | 3   | 2   |     |     |     |     |     |     |     |      |      |      |
| CO4 | 2   | 3   | 3   |     |     |     |     |     |     |      | 2    |      |

## SEMESTER S8

### NUTRACEUTICALS AND FUNCTIONAL FOODS

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT833</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3 :0:0:0        | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. This course will examine bioactive components of functional foods and nutraceuticals, their sources, chemistry, process technology, efficacy, safety and regulation.
2. Thorough knowledge and understanding of functional foods and nutraceuticals help the students to design innovative functional food products. An understanding on the health benefits of various nutraceuticals is emphasized.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to Nutraceuticals as Science</b><br>Historical overview to functional foods and nutraceuticals. Classification and future prospects of nutraceuticals. Sources of nutraceuticals, dietary supplements, fortified foods, phytochemicals. Zoo chemicals and microbes in food. Scope of nutraceuticals in food industry, national and global scenario.<br><b>Marketing, Safety, and Regulatory aspects of nutraceuticals and Functional Foods</b><br>Health claims, regulations, and safety issues – National and International. Research frontiers in functional foods, delivery of immunomodulators through functional foods. Concept of personalized medicine. | <b>9</b>             |
| <b>2</b>          | <b>Functional Foods</b><br>Conventional foods vs. Functional foods as well as nutraceuticals vs. pharmaceuticals. Introduction to biomarkers and food technology. Functional Lipids, Functional Carbohydrates from cereals, Functional Proteins.                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Nutrigenetics and Nutrigenomics. Probiotics, prebiotics and postbiotics, Functional beverages. Design a health drink suitable for diabetic patient.                                                                                                                                                                                                                                                                                                                                                       |          |
| <b>3</b> | <b>Properties, structure, and function of various nutraceuticals.</b><br>Natural occurrence of certain phytochemicals - Dietary anti-oxidants and flavonoids, Glucosamine, Octacosanol, Lycopene, Solasodine, Capsaicin, Carnitine, Melatonin and Ornithine alpha ketoglutarate. Carotenoids, phytoestrogens, omega – 3 fatty acids. Role of anti-oxidants in cancer prevention.                                                                                                                          | <b>9</b> |
| <b>4</b> | <b>Food as medicines</b><br>Nutraceuticals bridging the gap between food and medicine - Nutraceuticals in treatment for cognitive decline, Arthritis, Bronchitis, circulatory problems, hypoglycemia, Nephrological disorders, Liver disorders, Osteoporosis, Psoriasis and Ulcers. Brief idea about some Nutraceutical rich supplements such as Bee pollen, Caffeine, Green tea, Curcumin, Lecithin, Mushroom extract, Cordyceps, Chlorophyll, Phycocyanin, Kelp and single cell protein from Spirulina. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

### End Semester Examination Marks (ESE)

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| Part A                                                                                                                                                  | Part B                                                                                                                                                                                                                                                                | Total     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>2 Questions from each module.</li><li>Total of 8 Questions, each carrying 3 marks</li></ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"><li>Each question carries 9 marks.</li><li>Two questions will be given from each module, out of which 1 question should be answered.</li><li>Each question can have a maximum of 3 sub divisions.</li></ul> <p>(4x9 = 36 marks)</p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| CO1            | Recall general knowledge on development of functional foods and nutraceuticals                                                 | K1                           |
| CO2            | Select conventional foods and functional foods as well as nutraceuticals vs. pharmaceuticals                                   | K3                           |
| CO3            | Identify several natural ingredients used in the food preparation are important sources of nutraceuticals.                     | K3                           |
| CO4            | Utilize potential health benefits of functional foods and know the basic physicochemical properties of various nutraceuticals. | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

## SEMESTER S8

### FOOD INDUSTRY WASTE MANAGEMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT834</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide knowledge of Food Processing Industry Waste Management.
2. To provide knowledge of the various aspects and methods adopted for Waste Management.
3. To provide knowledge regarding the environmental considerations and Laws pertaining to these.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                             | <b>Contact Hours</b> |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Types of waste and magnitude of waste generation in different food processing industries, concept, scope and importance of waste management and effluent treatment, Standards for emission or discharge of environmental pollutants from food processing Industries as per the updated provision of Environment (Protection) Act, 1986. | <b>9</b>             |
| <b>2</b>          | Characterization and Effective Utilization of by-products from Cereals, Pulses and Oilseeds Industries. Fruits, Vegetables and Plantation products, Fermented foods, Dairy Industry and Milk Products Industry, Fish, Meat, Egg and Poultry processing industries.                                                                      | <b>9</b>             |
| <b>3</b>          | Characterization of food Industry effluents, Physical and Chemical parameters, Oxygen demands and their interrelationships, Residues (Solids), Fats, Oils and Grease, Forms of Nitrogen, Sulphur and Phosphorus, Anions and Cations, Surfactants, Colour, Odour, Taste,                                                                 | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | Toxicity. Unit concept of treatment of Food Industry Effluent. Screening, Sedimentation and Flootation as pre and primary treatments.                                                                                                                                                                                                                                                                                                                                           |          |
| <b>4</b> | Food effluent treatment: Biological oxidations: Objects, Organisms, Reactions involved, Oxygen requirements, Aeration devices / Equipment used. Systems: Lagoons, activated sludge process, oxidation ditches. Bio Remediation. Advanced wastewater treatment systems. Physical separations, Micro-strainers, Filters, Ultra filtration and reverse osmosis. Physico-chemical separations: Activated Carbon Adsorption, Ion Exchange, Electro-dialysis and Magnetic Separation. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                                    | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| <b>Course Outcome</b> |                                                                                                         | <b>Bloom's<br/>Knowledge<br/>Level (KL)</b> |
|-----------------------|---------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>CO1</b>            | Recall the laws and regulations pertaining to Waste Management and Disposal.                            | <b>K1</b>                                   |
| <b>CO2</b>            | Develop the byproducts associated with various types of food processing industries and its utilization. | <b>K3</b>                                   |
| <b>CO3</b>            | Utilize the different parameters associated with the characterization of food industry waste.           | <b>K3</b>                                   |
| <b>CO4</b>            | Demonstrate various food industry effluent treatment operations.                                        | <b>K2</b>                                   |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table:**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   |     |     |     |     |     |     |     |     |      |      |      |
| <b>CO3</b> | 3   | 2   |     |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> | 3   |     | 1   |     |     |     | 1   |     |     |      |      |      |

## SEMESTER S8

### FOOD PRODUCT DESIGN AND DEVELOPMENT

|                                            |                 |                    |                |
|--------------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                         | <b>OEFTT835</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week<br/>(L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                             | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>              | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

The main objective is the acquisition by the students of strategic and technological criteria for the design and development of sustainable food products in order to prepare a placement of the graduate in the R&D team of food companies.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>New product development:</b> Introduction- new products, customers and consumers, value addition, and market. Marketing characteristics of new products-product life cycle and profit picture. Corporate avenues for growth and profitability, opportunities in the marketplace for new product development, technological advances driving new product development, government's role in new product development.                                                                                                                                                                                          | <b>9</b>             |
| <b>2</b>          | <b>Designing new products:</b> New Food Product Development (NPD) process and activities, NPD success factors, design thinking process, new product design, food innovation case studies, market-oriented NPD methodologies, organization for successful NPD; Recipe development; use of traditional recipe and modification; involvement of consumers, chefs and recipe experts; selection of materials/ingredients for specific purposes; modifications for production on large scale, cost effectiveness, nutritional needs or uniqueness; use of novel food ingredients and novel processing technologies. | <b>9</b>             |
| <b>3</b>          | <b>Standardization &amp; Large scale production:</b> Process and equipment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | design; manufacturing protocol, establishing process parameters for optimum quality; sensory evaluation; food testing lab requirements; different techniques and tests; statistical quality control; comparison of market samples; stages of the integration of market and sensory analysis.                                                                                                                                                                     |          |
| <b>4</b> | <b>Quality, Safety &amp; Regulatory aspects:</b> Product stability; evaluation of shelf life; changes in sensory attributes and effects of environmental conditions; accelerated shelf life determination; developing packaging systems for maximum stability and cost effectiveness; regulatory aspects; approval for proprietary product, food safety management system and quality audits for a food product, regulatory aspects of FSSAI for a food product. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks , ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                     | <b>Part B</b>                                                                                                                                                                                                                                                   | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <p><b>3.</b> Each question carries 9 marks.</p> <p><b>4.</b> Two questions will be given from each module, out of which 1 question should be answered.</p> <p><b>5.</b> Each question can have a maximum of 3 sub divisions.</p> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                                                                 | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Identify the areas of possible innovations based on the life cycle of the food product.                                                                         | <b>K3</b>                    |
| <b>CO2</b>     | Select advanced formulation technology principles for the design and development of novel food products or the repositioning of products already on the market. | <b>K3</b>                    |
| <b>CO3</b>     | Organize a team, verified through the realization of a product design.                                                                                          | <b>K3</b>                    |
| <b>CO4</b>     | Make use of the concepts and terminology utilized in R&D and food design for repositioning or product innovation.                                               | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

## SEMESTER S8

### CEREALS AND LEGUME TECHNOLOGY

|                                      |                 |                    |                |
|--------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                   | <b>OEFTT836</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L:T:P:R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                       | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>        | Nil             | <b>Course Type</b> | Theory         |

#### Course Objectives:

Aim of this course is create the basic knowledge on different types of Cereals & Legumes and its processing methodologies.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                  | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Rice processing</b><br><br>Status of grain processing industries in India–rice-varieties-nutrient composition. Parboiling – physico chemical changes during parboiling – soaking – steaming – drying. Modern methods of parboiling-Rice milling. Equipments involved in the rice milling processing–Cleaner–Stoner–Husker-Separator-Whitening machine. By product utilization–processing of rice bran oil | <b>9</b>             |
| <b>2</b>          | <b>Wheat and Barley Processing</b><br><br>Wheat- nutrient composition – classification of wheat. Milling of wheat-equipments used in the milling – break roll reduction roll- purifier – plan sifter – scalping - scratch system. Types of wheat flour .Barley–Nutrient composition –Commercial production of malt                                                                                           | <b>9</b>             |
| <b>3</b>          | <b>Corn, oats and millet processing</b><br><br>Milling of corn -Dry milling and wet milling- Gluten and starch separation – enzyme hydrolysis – acid hydrolysis- HFCS. Processing of oats. Millet –                                                                                                                                                                                                          | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|          | major millet – minor millet - Processing of pearl and finger millets.                                                                                                                                                                                                                                                                                                                                                                                                             |          |
| <b>4</b> | <b>Value added products from Cereals and Processing of Legumes</b><br><br>Processing of breakfast cereals – processing of extruded products (noodles and pasta)-bread - Processing of protein isolates, flaked products- Processing of popcorn, puffed snacks, -Processing of special dietary foods.<br><br>Legumes Types – nutrient composition – anti nutritional factors present in the pulses – Commercial milling of pulse – premilling techniques- Processing of soya bean. | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal<br/>Examination- 2<br/>(Written )</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|---------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                         | <b>40</b>    |

**End Semester Examination Marks (ESE)**

*In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions*

| <b>Part A</b>                                                                                                                                                                                 | <b>Part B</b>                                                                                                                                                                                                                                                                                                | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;"><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;"><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain the processing of rice and utilization of by-products. | <b>K2</b>                    |
| <b>CO2</b>     | Explain the processing of barley and wheat                     | <b>K2</b>                    |
| <b>CO3</b>     | Explain the processing of corn, oat and millets                | <b>K2</b>                    |
| <b>CO4</b>     | Identify the value added products and their processing         | <b>K3</b>                    |
| <b>CO5</b>     | Select the processing of various legumes and their products.   | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create
